

1 Q. Provide available hydrological data relating to the Roddickton mini-hydro
2 plant.

3

4

5 A. Hydro does not collect this data as it is impractical for such a small run of
6 river plant. The only hydrological data available for the Roddickton mini-
7 hydro plant is from the initial project analysis. At that time the average flow
8 available for generation was estimated from available stream flow data to be
9 18.9 Mm³ per year.
