

1 Q. McShane states on pages 13 and 14 of her evidence “Hydro elected to
2 charge retained earnings for the entire amount of the transitional obligation,
3 thus creating a liability for future employee benefits. By comparison, many
4 Canadian utilities are amortizing the transitional obligation over the remaining
5 employee service life, as permitted under the CICA guidelines, and seeking
6 to recover the transitional obligation from rate payers over the amortization
7 period.”

8

9 (a) Why has Hydro chosen this approach in accounting for future
10 employee benefits?

11

12 (b) Provide a projection of the impact on revenue requirement for each
13 year from 2002 to 2006 if Hydro had elected to amortize the
14 transitional obligation over the remaining employee service life.

15

16 (c) Provide a projection of the impact on revenue requirement for each
17 year from 2002 to 2006 if Hydro had elected to account for employee
18 future benefits on a cash basis rather than an accrual basis of
19 accounting.

20

21 A. (a) In 2000 Hydro complied with the Canadian Institute of Chartered
22 Accountants (CICA) recommendation to account for Employee Future
23 Benefits (EFB) on an accrual rather than a cash basis. The accrual
24 method provided for two options to account for EFBs, namely the
25 Retroactive Application approach or the Prospective Application
26 approach. Hydro has chosen the Retroactive Application approach
27 and has charged retained earnings for the entire amount of the
28 transitional obligation for future employee benefits in 2000. It was felt

1 that an adjustment to retained earnings achieves the best matching of
2 costs and revenues, since the transitional balance has arisen from
3 employee service in prior periods and is not related to the activity of
4 current or future periods. In addition adoption of the prospective
5 approach would have resulted in a higher revenue requirement as
6 outlined in (b) below.

7

8 (b) If Hydro had elected to amortize the transitional obligation over the
9 remaining employee service life the revenue requirement in each of
10 the years 2002 to 2006 would have to increase by approximately \$1.8
11 million.

12

13 (c) Based on a projection of future retirements, the amount that would be
14 included in revenue requirement on a cash basis is estimated to be as
15 follows:

16	2002	1,199,000
17	2003	1,074,000
18	2004	1,174,000
19	2005	1,215,000
20	2006	1,648,000
