

1 Q. With what fuel do most isolated customers heat their homes?

2

3

4 A. Please see table below.

| Main Fuel Used for Space Heating                                                       |               |                 |
|----------------------------------------------------------------------------------------|---------------|-----------------|
|                                                                                        | Island Diesel | Labrador Diesel |
| Electricity                                                                            | 11%           | 5%              |
| Fuel Oil                                                                               | 58%           | 41%             |
| Wood                                                                                   | 31%           | 54%             |
| Data compiled from Hydro's 2001 survey of households located in its service territory. |               |                 |
