

1     Q.     On page 41 of the Production Division evidence given by James R. Haynes it  
2           indicates that NLH proposes that the GNP generation assets be assigned as  
3           common in the Cost of Service (COS).

4

5           (a) Please indicate in dollars how this would impact rates by customer  
6           group?

7

8           (b) Has approval of this change been factored into the 2004 & 2005  
9           projections used by NLH in this Rate Application?

10

11

12     A.     (a) Customer impacts have been filed as Appendix B to the report entitled  
13           "Review of COS Assignment for the GNP, Doyles-Port aux Basques, and  
14           Burin Peninsula Assets", prepared by Hydro's System Planning  
15           Department, and filed with this application as Exhibit JRH-3.

16

17           (b) The plant assignments used in this rate application reflect the Board's  
18           order P.U. 7 (2002-2003), and accordingly, approval of this change has  
19           not been factored into Hydro's projections.
