

1 Q. If new generation coming on line in 2003 does reduce consumption, what is
2 the reduction in fuel volume due to the excess generation?

3

4

5 A. In 2003 the new generation sources are forecast to produce 236.73 GWh. If
6 this energy is produced at Holyrood there would be approximately 380,000
7 more barrels of No. 6 fuel consumed.
