

1 Q. Please provide a copy of the economic assessments used to determine that
2 Granite Canal was the lowest cost resource available to Hydro (including
3 costs of any associated transmission required. Please indicate the calculated
4 long-term levelized price per kW.h over the life of the project and provide
5 detailed calculations of this figure. Provide a comparison to the forecast long-
6 term levelized price per kW.h for additional thermal generation at Holyrood
7 (along with detailed calculations), and other resource options identified and
8 analyzed, including any interconnection to Labrador or other points on the
9 North American grid.

10
11
12 A. Please refer to response to CA-36 NLH for a copy of the report “Generation
13 Expansion Study of Near Term Options for Meeting Newfoundland’s Load
14 Growth”, November 1999.

15
16 For the long-term levelized costs for Granite Canal, please refer to the
17 response to IC-146 NLH.

18
19 For reasons of commercial confidentiality, Hydro cannot provide cost
20 information for future generation expansion options.
