

1    Q.    Regarding IC-124 please indicate the treatment in the RSP of the loss of an  
2           industrial customer.

3

4

5    A.    Within the RSP, the Industrial class load is stabilized, rather than individual  
6           customer loads. Therefore, the loss of an industrial customer means the  
7           base to which the industrial customer class load is stabilized will continue to  
8           include sales for the former customer, until another test year is established.
