

- 1    Q.    Regarding Haynes Table 8 - Please explain the substantial downward  
2           revision in long-term forecast peaks from Budgell Schedule XII from the 2001  
3           application to Haynes Table 8, particularly in regards to the 46 MW increase  
4           that should have resulted from the elimination of Interruptible B.  
5  
6  
7    A.    As indicated in IC-393 NLH, the demand forecast should not now be 46 MW  
8           higher due to the elimination of Interruptible B. The downward revision in the  
9           long-term load forecast has previously been outlined in IC-269 NLH.
