

NLH-212 PUB (Re Pages 33-35, regarding a NP Generation Tariff)***Is a NP Generation Tariff necessary for NP Generation within NP's service area? Please explain.***

Response:

EES Consulting would not propose that there be a NP Generation Tariff for power that remains within NP service areas. EES Consulting's recommendations in this regard refer to power that requires the use of Hydro infrastructure to allow the energy to be delivered to NP load centres.
