1		Re: Page 54, line 29
2		
3	Q.	On what basis is it assumed that an accumulating RSP balance which
4		exceeds a one year horizon (likely multiple year horizon for the
5		hydraulic component as suggested), is financed with short term
6		funding that normally reflects an average maturity time frame of
7		approximately 3 months?
8		
9	A.	RSP-type balances under regulated rate systems in Canada and
LO		elsewhere appear to generally be based on attracting short-term
l1		interest, not long-term interest or equity returns. That is the basis for
<b>L</b> 2		Mr. Osler and Mr. Bowman's recommendation. In many cases these
L3		other funds operate for many years or decades under this mechanics.
L <b>4</b>		
l5		It would not seem to be normal practice to use short-term borrowings
l6		only for those items that a Corporation expects to have fully paid off in
L7		approximately three months - for example, financing of accounts
<b>L</b> 8		receivable may merit short-term financing, even though a balance
L9		sheet will almost perpetually have a certain level of accounts
20		receivable outstanding.
