

Perry and Henderson

(Re: Page 22, lines 4-5)

Q. Given the results of the restated Tables 5 and 6, please recalculate the rate of return on rate base variation.

A. As indicated in Newfoundland Power's responses to Requests for Information NLH-69 NP and NLH-70 NP, restatement of Tables 5 and 6 is not appropriate since the RSP load variation does not impact Newfoundland Power's contribution margin. As a result Newfoundland Power has not recalculated the rate of return on rate base variation.
