5 **Q. Would NP accept a demand and energy rate if there was another wholesale**
6 **customer in the class that had a materially different load profile? If not, why?**

7
8 A. No, Newfoundland Power would not accept a demand/energy rate if there was another
9 wholesale customer in the class that had a materially different load profile.

10
11 The fact that Newfoundland Power is the only customer in its class is not the reason
12 Newfoundland Power opposes a demand/energy rate. It is the reason why a
13 demand/energy rate is not necessary to ensure intra-class equity.
