

1     Q.     The Cost of Service evidence states at page 17, lines 25 to 26:

2

3            “It is our view that monthly peaks are not relevant in light of the fact that it is  
4            only winter peak that drives demand costs.”

5

6            On the Hydro power systems, is it correct that certain customers’ usage will  
7            peak during seasons other than winter.

8

9

10    A.     It is correct that on the Hydro power systems, certain customers’ usage will  
11            peak during seasons other than winter, which is the customer’s non-  
12            coincident peak. The Cost of Service evidence referred to above, however,  
13            discusses demand costs, which are allocated on a single, coincident, winter  
14            peak.
