

1 Q. Further to NP-118 NLH: Is the difficulty suggested in offering a credit to NP
2 for peak load reductions similar to the problems facing NP in providing
3 credits to its customers for load reduction at the time of system peak? If not,
4 why?

5
6
7 A. The difficulties are not seen as being similar, since in offering credits to
8 individual customers for peak load reductions, NP does not have to focus on
9 concerns such as weather-normalized demand and load growth in
10 determining the conservation component of load.
