

1 Q. The SGE Acres report (Production evidence, Exhibit JRH-2) recommended
2 that “the longest reliable inflow sequence (period of record) should be used
3 for all Hydro’s operations planning and rate setting purposes”. Provide
4 evidence of SGE Acres past experience before regulatory boards concerning
5 appropriate production levels for *rate setting purposes*.

6

7

8 A. SGE Acres does not have experience before regulatory boards on hydraulic
9 production levels for rate setting purposes. However, Acres and SGE Acres
10 have extensive experience in estimating hydropower production levels for its
11 clients, for whatever purpose is required by the client. Attached is a CD
12 containing Acres’ corporate Power brochure and feature sheets listing
13 projects involving generation estimates.
