

1 Q. Did SGE Acres specifically review which methodology (i.e., the 30 year
2 average or the average based on the longest available sequence) would
3 have been a better predictor of inflows for each of the last 10 years
4 (Production evidence, page 29, lines 14 to 18)?
5
6

7 A. No, this was not reviewed. The irregular variability of hydrology means that
8 whichever methodology would have been better over any particular period is
9 not relevant in determining which method gives the best overall energy
10 estimate.
