

1 Q. On page 3 of Mr. Greneman's Evidence, he referred to the functionalization
2 of transmission lines that are functionalized as generation. Please provide all
3 studies, documents and worksheets used to determine the treatment of these
4 transmission lines and provide a discussion of the criteria used to determine
5 if transmission facilities are generation related.

6

7

8 A. Transmission lines and substations in the Island Interconnected System used
9 solely or dominantly for the purpose of connecting remotely-located
10 generation to the main transmission system were changed to be classified in
11 the same manner as the generating stations they serve as a result of the
12 Board's 1993 Cost of Service methodology, referred to by Hydro as the
13 Generic Cost of Service methodology. There are no studies, documents or
14 worksheets used to determine the treatment of these transmission lines.

15

16 These transmission lines were built expressly to interconnect the associated
17 generation facilities to the main transmission system, which remains the
18 criteria used in this determination.
