

1    Q.    Please describe in detail the type of service provided to a customer on the  
2           Industrial Wheeling rate schedule from both an operational perspective as  
3           well as in terms of rights and obligations.

4  
5  
6    A.    A customer on the Industrial Wheeling rate can use Hydro's transmission  
7           network to transfer energy from one of its generating sites to one of its load  
8           centres. It is subject to the terms and conditions as outlined in the Wheeling  
9           article of their contracts which were approved in Order No. PU-7 (2002-  
10          2003). Currently ACCC uses this to transfer electricity generated at their  
11          Buchans hydro-electric station to either of their mills and to transfer to the  
12          Stephenville mill electricity generated at Grand Falls and Bishops Falls,  
13          exclusive of the Exploits River Hydro Partnerships' energy, that is surplus to  
14          the Grand Falls mill's requirement.
