

Q. Reference Revised Evidence, p. 5, lines 12 - 14

Provide details relied on for the statement that most Canadian utilities use a form of project classification.

A. The statement by Mr. Barreca that NLH-11 references, *“A cursory survey of the capital review policies of other regulatory bodies in Canada shows that most utilize some form of project classification”*, refers to regulatory bodies in Canada that have been identified as among those specifically addressing capital budgets as a regulatory issue. Without provision for capital budget approval, there is not likely to be any policy or project classification.
