

1 Q. **RE: p. B-77** Provide particulars of the equipment to be installed under this
2 Project and the range of costs of single installations.

3

4

5 A. The particulars of the equipment to be installed under this project depend on
6 the frequency of access. The most frequently accessed locations are fuel
7 tanks, which have to be accessed for fuel reconciliation purposes. In these
8 cases, the nature of the equipment to be installed will be a combination of
9 handrails, catwalks, attachment points and/or barriers for fall arrest and travel
10 restraint. For items such as transformers, attachment points for connection
11 of personal fall arrest harnesses will be installed. As well, mechanisms will
12 be installed to allow temporary railing to be erected whenever workers are on
13 top of the equipment. For buildings depending on the roof design the
14 equipment will be a combination of attachment points for harnesses and
15 travel restraint barriers. The cost for a single installation is expected to be
16 within the range of \$1,000 to \$5,000.
