

1 **Construction of New Diesel Plant, p. B-78, \$2,226,500**

2 Q. What plans does NLH have for the mobile diesel unit that is currently
3 stationed in St. Lewis?

4

5

6 A. As soon as the mobile unit is no longer required at the St Lewis facility, it will
7 be made available for use by System Operations at any of the other diesel
8 sites or distribution systems. In that instance it will be used for: emergency
9 situations where other generation units have failed; to provide temporary
10 generation to minimize outages during distribution upgrade work; or to
11 respond to unanticipated increases in load demand where permanent diesels
12 can not be obtained in sufficient time.
