

1 Q. The Decision and Order of the Board for P.U. 14, point 62 (page 163) states
2 "The Board has authority and responsibility to ensure that adequate planning
3 occurs for the production, transmission and distribution of least cost reliable
4 power in the Province. While the Board will make no order at this time with
5 respect to Integrated Resource Planning, the utilities may be required by the
6 Board, consistent with its mandate, to participate in a generic process to
7 address issues and benefits associated with Integrated Resource Planning".
8

9 (a) Has Hydro approached the Board concerning a generic hearing on
10 integrated resource planning?

11 (b) With regard to the response to CA 42 NLH, how much time is required
12 prior to the competitive RFP process for Hydro to submit an integrated
13 resource plan for Board review and approval?
14
15

16 A. (a) No. Hydro has not approached the Board concerning a generic
17 hearing on integrated resource planning.
18

19 (b) As the development of an Integrated Resources Plan would involve
20 input from all energy sectors, Hydro is currently not in a position to
21 estimate how much time it would take to submit such a plan for
22 approval.
