

1    Q.    With regard to the Haynes/Henderson/Cater evidence (page 8, lines 7 to 23),  
2           provide Hydro's current integrated resource plan showing the forecast  
3           demand and supply situation for the next ten years. Show all proposed  
4           projects for meeting increasing demand and replacing plant retirements  
5           including generation, demand side management, and transmission initiatives,  
6           production from current facilities, environmental initiatives and costs.

7

8

9    A.    Hydro does not prepare a complete integrated resource plan. Hydro's long-  
10          term load forecast for the Island interconnected system is presented in  
11          Regulated Activities Evidence Table 4, page 30. Hydro's generation  
12          expansion plan for this load forecast is presented in IC 53 NLH.
