1   Q.   Does Hydro incorporate any transmission or transformation reliability

2   considerations in its LOLH calculations? If so, please provide the system

3   topology used in the LOLH modelling, and all variables and outage data used

4   by the model. Explain how the model accounts for transmission outages. (For

5   example, does the model produce equivalent multi-state units at certain

6   buses combining transmission outage probabilities with the outage

7   probabilities of the generators that would be affected by transmission

8   outages?)

9

10

11   A.   Hydro does not incorporate any transmission or transformation reliability

12   considerations in its LOLH calculations.
