

1 Q. Please confirm that NERA's May 2006 report at Table 5A indicates that
2 Portland Creek hydraulic generating station can be brought into service at a
3 cost less than the benefits of Holyrood fuel it will displace, so in effect the
4 capacity that this plant bring to the system is, in effect, free. If so, please
5 indicate whether NERA recommends bringing this plant into service as
6 quickly as possible rather than waiting until 2019. If not, why not.
