

1 Q. Provide the 2007 rate increase that would be proposed for each customer
2 class if the hydraulic production forecast for the 2007 test year was based on
3 the 30-year average method that was used in setting rates pursuant to the
4 2001 Hydro GRA and the 2003 Hydro GRA.

5

6

7 A. Please see response to NP 46 NLH. In Order No. P.U. 14 (2004), the Board
8 determined that Hydro's next general rate application should use the full
9 historic data flow record, therefore, the 30-year average method has not
10 been updated.
