

1    Q.    Confirm the current operation of the Load Variation component of the RSP  
2           provides an indirect marginal energy cost signal to the Industrial Customer  
3           class. (Review of the Operation of the Rate Stabilization Plan Report, Section  
4           3.3)

5

6

7    A.    The current operation of the load variation component of the RSP provides  
8           an indirect marginal energy cost signal to the Industrial customer class,  
9           based on test year marginal energy costs.

10

11           The impact of forecast current marginal energy prices is charged to  
12           customers through the fuel rider provision of the RSP.
