yesterday. We haven't escaped the flu in this end of the room, I regret to inform you. We will be brief this morning. Ms. Butler and I are going to share this to some extent. I'm going to be dealing with just three matters and Ms. Butler will be dealing with the contested matters, and that, incidentally, essentially follows the way that we've proceeded throughout the last several months.

The three matters I'm going to be dealing with, Mr. Chair, I'm going to be providing just a brief overview and a brief overview is the revised filing and the settlement agreements. I'm also going to be updating the Board to some degree, just to mention it, on the Burgeo School and Library matter. And the third issue I'm going to be speaking to briefly is on the application of costs by the Industrial Customers and our position on that.

Earlier in the hearing Mr. Johnson reminded us something that Mr. Kelly had pointed out, that we were sometimes guilty of agreeing violently on matters. And in our view, if efficient regulation is going to be allowed to happen, the parties should probably

stop doing that here and being repetitious, so I promise to be brief, and we will be largely asking the Board to refer to the fairly extensive written representations that have been made.

I think it's fair to characterize the submissions of all parties on the settlement agreements and on the revised rates filing as a joint submission. It may be stretching it a little bit, but in any event, the Board has ordered interim rates and I think the parties are all on the same wavelength, and no one has said otherwise, but that those interim rates should be made final, and that, of course, is Hydro's application. We do, however, acknowledge that at least two groups have made a submission, the groups of Labrador West, which is not in that direction and they haven't asked that those rates be made final.

And I'm not going to go on too much about what we all see as a significant accomplishment to the settlement of this hearing as opposed to a long-contested hearing. We've gone on about that perhaps

Page 5 long enough already. But there is one point I would like to make, Mr. Chair, about the issue of the Board's view, of the Board's treatment of a joint submission or a joint proposal of settlement agreements and in the manner this has turned out our revised application based upon that. We understand that this is as new to this Board as it was to the parties, that is to say, the essentially settled rate case proposal. We know it's not new to public utilities tribunals, but I believe this is the first time anything this extensive has happened here. And certainly, it's our first involvement in it, certainly. The comments I have pertain to the way we would ask the Board to treat this submission.

I think the Board understands that there was a full range of issues before the parties when negotiations started, and I think it's also fair to say that those settlement agreements that we have filed with you treat a number of different issues, there's a full package of issues and a full package of different outcomes on them, on those individual issues. We recognize that they may

not have been the same outcomes on an individual basis, issue by issue, as the Board may have reached, and we're asking that the Board consider the overall circumstance, the overall outcome. We also recognize that it may not be exactly the same overall outcome that the Board may have reached if this was a fully contested hearing, but again, we ask that the Board consider the overall outcome of the settled hearing.

Page 6

Page 8

I believe I can speak on behalf of all parties in saying that the Board is not required, and we understand that the Board is not required to accept any joint proposal from any group of parties that appear before it. The Board has an independent jurisdiction that has much to do with ensuring that the public interest is looked after, so any order that is issued by this Board must ultimately pass this test.

I think it is proper for me to inform the Board that the parties were aware of this responsibility of the Board from the minute negotiations commenced. Negotiations proceeded along the lines of principle, not

Page 7

just seeking middle ground and not just horse trading, which is the way that one might fear that these things might go, but that's not the way it happened. And I think also it's important that the Board is informed that the negotiations proceeded with considerable guidance from Board staff at crucial intervals and with also the assistance of Mr. Kennedy, the Board appointed facilitator, ensuing that these principles were kept in our mind, I assure you.

So we would submit that the Board should ask itself whether overall the settlement is a reasonable one, one that balances the interests of ratepayers, customers groups and the utility and it should, to some extent, defer to the parties' collective sense of goodwill, cooperation and also, and this is important in the end, the parties' individual abilities to competently look after the interests of the groups that they represented at the bargaining tables. I'm sure that as the parties we all realized that right from the beginning and we still realize that this morning.

I would repeat that overall the outcomes in the proposal agreements and in the revised filing are fair to all parties and most especially to the consumers who will enjoy stable and reasonable rates that enable the utility to provide safe and reliable delivery of electrical service. And if the Board agrees with that general outcome, the parties, Hydro submits, the parties have earned and are entitled to a certain level of deference from the Board and the proposed agreement should be accepted and the interim rate should be made final.

Another matter I need to address this morning, Mr. Chair, is the issue of the Burgeo School and Library. Bit of a wrinkle in this unfolding of this rate case. The history of the rates charged to the Burgeo School and Library is a long one, approximately 40 years or more. It appears to, and I've done some reading on this, which was interesting, over the last week or so, it appears to predate the time that Hydro or its immediate predecessor, Newfoundland and Labrador Power Commission or the Power Distribution District, two different

Page 9 entities, and they were both involved in certain periods of this history. It seems to predate that time and it goes back to the time that a town council was providing power in that community. It goes back to a time certainly in the 1960s, at which time Burgeo was an electrically isolated community. The community was interconnected to the grid in the 1980s, and at that point the Power Distribution District, PDD, inherited the old school and library rate that really is a one-off rate, there's nothing exactly like it, no other group on that rate. That's the ancient history.

And perhaps what we should focus on to a greater extent is the more recent history. In the summer of 2003 Hydro appeared before this Board for a GRA and in that summer an Order in Council was issued as to rural rates. That Order in Council continued the rate for the Burgeo School and Library, but at that time a new school had been built and it was a new owner. Hydro concluded, at that time, that the Order in Council was not made in relation to that new school and so the rates that would

Page 11

it, essentially, and Hydro has to ensure that the spirit an the intent of the Order in Council is carried forward and we propose rates which the Board, I think it's probably fairer to say, confirms if its in accordance with the direction. We will be doing that.

The last matter I need to speak to the Board on this morning before I pass it over to Ms. Butler is the issue of costs. I said in our opening submission a few weeks ago that settling a hearing should save significant time and money over a contested hearing, but that we had learned going through the process that there is still a considerable amount of effort required in doing this properly.

It would not, in Hydro's view, be reasonable for this Board to expect the parties to participate in a negotiated settlement process involving lawyers, consultants, the filing of expert testimony, the preparing of requests for information, the review of all that information that comes back, all that stuff requires that parties incur some significant amount of costs and we understand that. And this is true of a

have been charged--the rates that had been charged, I'm sorry, to that customer are the same interconnected general service rates that Hydro charges to other schools, other interconnected schools on the Island Interconnected System.

A short time ago Mr. Johnson brought this matter to our attention, we discussed it, and Hydro has since determined that the 2003 Order in Council, in all likelihood, referred to the newly constructed school, not just to the old school that was in place. So we have looked at this matter since and we have determined that we ought to rectify the situation. There will be a proposal coming forward to the Board for this rate. There is an established manner for this rate to be determined, it's an escalated rate and there are some rules in place from old Orders in Council, and we will, of course, rectify any over billings that have occurred.

And I realize, Mr. Chair, that these matters of Order in Council rates can be somewhat clumsy in the matter of jurisdiction for the Board because the Board is directed on

Page 12

Page 10

contested hearing and to a very large degree it's also true of a negotiated settlement hearing, as we have here.

Hydro also feels strongly that it would be shortsighted to send a signal to intervenors that the net result of a negotiated settlement is a higher net bill for lawyers and consultants. And I suppose what we mean by that is if the Board were to deny costs on the basis that there was no contested hearing and the Boards (sic.) were left out of pocket in a worse situation than they would have been if they were awarded costs after a full hearing, there is a potential perverse signal being sent to the parties and one which is contrary to what we believe ought to be the signal encouraging settlement.

And I suppose one further thing I should say about this is we anticipate that there will be more of this to come, more negotiated settlements, more of these kinds of processes. And we were quite encouraged by the level of participation and cooperation from the parties in a full range of negotiations and we would hope that this will happen again in the

Page 13 1 future. That can be fully expected. 1 Board to a fairly recent decision in the page 14 (2004) priving out of Hudon's page 15 and 14 (2004).	Page 14

Page 17 Whalen. Of the six contested issues which are addressed in Hydro's written argument, Section B, I'm really only going to touch very briefly this morning on three, and that is the automatic adjustment mechanism, the IRP, and reliability policy and reliability tracking addressed by Mr. Douglas Bowman.

First, relative to the automatic adjustment mechanism, in this jurisdiction which regulates on a return on rate base basis, unlike so many others that regulate on a return on equity basis, Hydro maintains that it was completely fair and appropriate that it should model its proposed automatic adjustment mechanism on Newfoundland Power's formula. Relative to Dr. Cannon's concern over the difference between forecast rates and actual rates, I remind the Board that this was something that you have already addressed as a stated concern in the case of Newfoundland Power's formula and that in response to that criticism or concern you required Newfoundland Power to provide additional reporting which is also embedded into Hydro's proposed automatic adjustment mechanism. So once again, the

Page 18 concern which Dr. Cannon has expressed to you was a concern that you have dealt with before and which Hydro has modelled in its proposed

The other factor to consider relative to the concern for over earning, as Dr. Cannon expresses it, is that in a practical sense that is in relation to a circumstance in which Hydro's margin is actually \$8 million, so any concern for over earning has to be considered in relation to the size of the actual margin. And the difference, as we indicated in the example, relative to the 2010 year being a \$600,000 potential for over earning.

Before I leave the automatic adjustment mechanism I want to refer to a paragraph of the Consumer Advocate's argument with which Hydro does take issue, and that is paragraph Here the Consumer Advocate makes reference to evidence from Dr. Cannon but does not give a reference to the actual evidence that was given under oath. And you will find Dr. Cannon's evidence on this point in the January 25th transcript starting at page 112, line 8 and going to page 113, line 6 and the

Board can, of course, read this when you're

deliberating on the point. Hydro just wants it to be clear, as a matter of record, that we

do not accept that this is accurate, what Dr.

Cannon said was what he believed to be

happening in Ontario, but he also acknowledged that what is happening in Ontario has no

relevance to the recommendation he was making

9 in this hearing. What actually occurs in that jurisdiction is a matter of public record, Mr. 10

Chairman. And you'll find that by going to

the web site for the Ontario Energy Board that

there was a December 20th, 2006 report of the Board on cost of capital, with which report

Dr. Cannon told the Board he was not familiar,

and you'll find that reference in his

transcript, January 25th, page 154, lines 5 to

9. Hydro believes that what actually happens in Ontario is that the embedded cost of debt

is only changed when there is re-basing of

rates. So again, that's a matter of public

record, but I think it's important to clarify

that we do not accept what's stated in paragraph 54 of the Consumer Advocate's

submissions on this point. Having said that,

though, what's really important on the 1

automatic adjustment mechanism and Dr. 2 Cannon's evidence is that no other 3

jurisdiction does what Dr. Cannon is proposing 4

5 you do. And, in fact, he's never made that recommendation to any other regulator. The 6

undertaking document U-Hydro 1 which was 7

provided to the Board and all parties on 8 9

February 2nd, 2007, sets out the formula, the actual proposed automatic adjustment

mechanism. And Hydro suggests that if the

Board is prepared to accept Hydro's proposal

on the automatic adjustment mechanism but has any questions relative to the mechanics of it,

because, of course, I can't give evidence on that, that it would be appropriate for the

Board's consultant to deal with Mr. Bradbury

on it.

I'll turn just very briefly to the issue of integrated resource planning. And Hydro's argument deals with this in Section B.2. In our written argument, as well as in some submissions and cross-examination during the hearing, we made reference to the BC Integrated, it's called an IEP instead of an

Page 20

	Page 21		Page 22
1	IRP in that jurisdiction. And just so that	1	extent of the exercise, but whether, in fact,
2	there'd be no misunderstanding about the	2	the exercise itself is appropriate, and if
3	extent of the exercise in that jurisdiction on	3	appropriate, then as indicated in your prior
4	which I believe the Industrial Customer's	4	orders whether, in fact, it should be a
5	expert suggested there may be some modelling,	5	generic process involving both utilities but
6	in answer to an NRFI they referred us only to	6	parties should be involved, etcetera.
7	the web site and not to the actual filing.	7	Finally, on the issue of reliability. On
8	What I have on my table here is the actual	8	reliability policy Hydro's position is stated
9	filing, which is three volumes long, so in our	9	in Section B.3 of our argument. Frankly, we
10	evidence we refer to the fact that it was over	10	found Mr. Bowman's evidence on this to be,
11	2000 pages. The enormity of the exercise is	11	both pre-filed and oral, confusing. I was
12	something that has to be considered because	12	left not really understanding whether Mr.
13	Hydro is not simply accepting that an IRP is	13	Bowman really knew what he was recommending
14	appropriate at this time.	14	for Hydro, and the references that he had
15	And I want to clarify what is stated in	15	cited to other jurisdictions we felt were not
16	the Industrial Customer's argument at page 4,	16	supportive of his position. The Board has
17	which they indicate that the Board should	17	already exercised its regulatory authority
18	order, in this application, that any party has	18	relative to Hydro's reporting requirements
19	leave to bring an application for directions	19	with respect to reliability. And Hydro's
20	of the Board on how to proceed with the IRP	20	position is, with respect to those, that any
21	process, 60 days or later following the	21	modifications for these should follow only if
22	province's energy plan. Hydro's position is	22	the Board is satisfied that they provide value
23	that whether an integrated resource planning	23	sufficient to warrant any costs. Relative to
24	exercise is appropriate or not is something	24	what criticism he has made on Hydro's
25	this Board should determine, not simply the	25	reliability targets, Hydro's current target,
	Page 23		Page 24
1	and it is only a current target, is to achieve	1	Page 24 conservation and others. Thank you, very

rebi	ruary 15, 2007 Mult	1-Page	NL Hydro's Revised 2006 Rate Application
	Page 25		Page 26
1	determine if an IRP exercise should then	1	calculation of that rate sheet. And I
2	follow. And if that is your determination,	2	probably should just take a moment to explain
3	then the parameters of that and the parties	3	this. And I'm not, by no means, an expert in
4	who would be involved in that. But the	4	rate design. But as I understand, this rate
5	Industrial Customer's arguments seem to	5	was essentially closed just a couple of years
6	suggest that, in fact, it was a matter of	6	ago from the point of view that it wasn't
7	awaiting the release of the energy plan and	7	escalated. There is an Order in Council, I
8	then coming to the Board and saying, okay,	8	think it's in 1978, I could be wrong on the
9	now, what are the parameters. And I don'twe	9	exact date, which indicates the manner by
10	have to step one step back from that and say,	10	which that rate was to be escalated. And I
11	no, it is a matter for the Board to exercise	11	think it essentially follows the level of
12	its discretion first as to whether an IRP is	12	change in rates for Newfoundland Power. And
13	an appropriate exercise following the release	13	we're going to have to have our rates people
14	of that plan.	14	go back and essentially escalate that rate
	HAIRMAN:	15	from what it should have been a couple of
16	Q. No, that's what I understood to be, I think,	16	years ago to the present and re-post that
17	your submission during the hearing. I was	17	rate. It is, as the Board is aware, low rate;
18	just a little bit confused. Thank you, very	18	it's in the range of four or five cents, I
19	much for that clarification. Mr. Young, just	19	understand, even escalated. And we would then
20	I do have again just a quick question. With	20	bring that forward and ask the Board to
21	regard to the Burgeo Library and School,	21	consider whether that should be approved based
22	you're coming back with some additional	22	upon our calculation and our escalation
23	information on that?	23	method.
1	IR. YOUNG:		IRMAN:
25	Q. Yeah, essentially it would just be a		. So this will come forward as sort of an
	Page 27		Page 28
1	addendum to the application. Will that take	1	regulatory cost. Does the estimate that's
2	how long do you expect before that's	2	included in revenue requirement contemplate an
3	submitted?	3	award of cost to the Industrial Customers, as
1	IR. YOUNG:	4	well, there would be no update or revision
1	Q. No, I imagine it will be days or a week or two	5	required there?
6	at the most. It's just a matter ofand	6 MR.	YOUNG:
7	perhaps we're at the Board's pleasure as to		Yeah. No, that's an interesting point you
8	how this goes. I mean, we can do this as a	8	raise. Perhaps I should just explore that
9	separate application. I don't think it's	9	just for a moment to explain how a settled
10	really, at the moment it's not really a	10	proposal is a little different than you would
11	contested matter, as I understand it now. Mr.	11	have with a contested hearing and an order.
12	Johnson, my learned friend, and I have	12	What normally has happened and what this Board
13	discussed this a few times over the last few	13	and Hydro, in fact, is used to doing, is
14	weeks and determined generally what's needed	14	indicating to the Board that it would
15	to be done. So we will be coming forward with	15	appreciate to have an estimate of its award of
16	an application very soon.	16	costs. And then when the Board then issues
17 C	HAIRMAN:	17	its order upon which Hydro designs rates for
18	Q. This is a matter of a few days?	18	its re-application, it would have those in
19 M	IR. YOUNG:	19	there as an estimate of costs and then it
20	Q. I would think so, yes. Certainly long before	20	would sort of follow pretty neatly, of course.
21	we need to have the rates approved.	21	This time it's different because we've applied
22 C	OMMISSIONER WHALEN:	22	for interim rates and are asking those rates
23	Q. I just wanted to confirm, as well, Mr. Young,	23	to be final. There is already included in it
24	on the issue of the Industrial Customers costs	24	an estimate of costs, and we're asking for
25	that Hydro's proposed to amortize its	25	that amount to be amortized. Whether or not

It's a pleasure to appear before the Board to provide oral submissions in my capacity as Consumer Advocate. The Board, of course, already had the parties written submissions which were filed on February 9th, just this past Friday. And the Board is no doubt familiar with these submissions as well	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	i	Page 32 at's not my intention to bring the Board chapter and verse through those submissions and those reports. I will be addressing the following assues, the negotiated agreements first, the automatic adjustment formula for return on the base, reliability policy and initiatives, opeer group benchmarking and tracking and reporting of additional performance andicators, conservation initiatives, IRP and fust a brief word on costs at the end. Turning first to the negotiated agreements. All parties at the outset of the hearing, of course, on January 22nd, spoke to cheir support of negotiated agreements. I would have been shocked if they had done otherwise, frankly. And Hydro, in its written submission, has dealt extensively with these agreements. Newfoundland Power and the Industrial Customers have also submitted in their briefs that they request that the Board determine the various matters addressed in the

Page 33 with these submissions. These agreements reached after an extensive discovery and negotiation process which really started back in the winter of 2006 when Hydro first held meetings with the parties to overview some of their plan initiatives do reflect a reasoned consensus of the parties. The parties, as Mr. Young ask indicated, were assisted ably, I think, by their respective consultants and advisors and in that regard also had the benefit of the Board's facilitator.

As I have said before, I am pleased with the results achieved for consumers through the extensive process. As Hydro has noted in its submission, the rate outcomes are essentially status quo for most domestic and general service customers, receiving little or no increase. And as I said at the beginning of the hearing, I'm also pleased that progress has been made on other fronts, such as the rate design review and the RSP review, with the identification of the principles by the parties and their consultants and a process which we hope will be workable for a thorough review of these issues. I, for one, am

Page 35 ually.

average and we'd move it up or down annually. But as you know, we're still not making any adjustment for Hydro's embedded cost of debt.

Now, as we've heard from Dr. Cannon, and this is not disputed by Mr. Mark Bradbury, of Hydro, Hydro's embedded costs of debt determines in excess of 92 percent of Hydro's overall return on rate base, while Hydro's cost of equity determines just less than eight percent of it. So to my mind, with its proposal, Hydro is in essence saying we don't want to be stuck with the test year cost of equity, which is in this case is agreed to be 4.47 percent, something in that area, for the next number of years, we want that to float up or down, hopefully up, I suppose, because it is relatively low, and we want that adjusted annually. So, of course, in order to do that you have to have a formula to depart from the test year values for cost of equity. The traditional regulatory position would leave everything in place at the test year values, and of course, that's the status quo for Hydro now, because it has been acting for years

confident that these reviews will be efficient and will ultimately benefit our electrical system. Page 34

Just before leaving the topic of negotiated agreements, I didn't dream that the Burgeo school issue would be the only fly in the ointment, but the Board certainly will have read my comments in the brief with respect to that issue and, and I concur with the approach that Hydro is taking in light of the directive.

Turning now to the automatic adjustment mechanism. As the Board knows, this was a contested issue. And Hydro has proposed an automatic adjustment mechanism for its return on rate base which is modelled on the Newfoundland Power mechanism which this Board established and later modified and now we're working with.

As you know, Hydro's proposal would have us annually adjusting its cost of equity up or down, depending upon the written estimates of Hydro's cost of issuing long-term debt on the first ten trading days in October, plus an underwriter's credit spread, we'd take an

Page 36

without such a formula. So Hydro's proposal, using the Newfoundland Power model for itself is to freeze at a constant rate for four years, which is the plan life of the automatic adjustment mechanism, the cost rate on that component that makes up 92 percent of the return on rate base, but to allow year-by-year adjustments on that which accounts for eight percent.

Now I don't take issue with the notion that an AAM in principle can reduce costs and promote enhanced regulatory efficiency. But I do take exception to Hydro's position as it stated in its brief that Hydro should be, quote, "entitled," to an AAM based on the Newfoundland Power model on the grounds of regulatory fairness and regulatory consistency.

Newfoundland Power does not have anywhere near 92 percent of its overall return on rate base determined by its embedded cost of debt. Newfoundland Power is more like 50/50. And this is a very material difference between these two utilities. It's my submission that the Board should consider this material

Page 38

and approaches to achieve the purposes of the Public Utilities Act and to implement provincial power policy.

Now, in my submission, Hydro's brief of argument would have it that this Board is hide bound to employ only X post facto processes for that which makes up the other 92 percent of Hydro's rate base. I would submit that to accept such a contention is really to decline jurisdiction that this Board has to fashion a more realistic formula, one that meets the facts and circumstances of Hydro. The Court of Appeal would not, I'm very confident, say otherwise. If the Board found that the Newfoundland Power formula was not the most appropriate for Hydro, the Board should be able to fashion another formula that is more fitting.

Now I note, and as I've said in my brief, the Board's own financial consultants, Grant Thornton, who are no doubt quite familiar with rate base regulation, previously suggested that the Board consider adjusting for changes in the embedded cost of debt annually. Now I know that obviously the Board opted for a

that to deviate from the Newfoundland Power formula would, in essence, run contrary to

regulatory principles of fairness and consistency. We reject that. It's important

to note that what Hydro was proposing, in

itself, represents a departure from using test year values for all of the components that

make up its overall return on rate base. It's

already a departure from Section 3A(2) of the

EPCA, which Hydro cites and which specifies that rates to be charged for the supply of

power should be established wherever practicable, based on forecast costs of power

for one or more years. In this jurisdiction, the Board has focused on a single test year.

In this process of rate setting, it's a perspective exercise. So there's already a

departure when we start talking about formulas.

Now the Board, in my submission, is fully within its right and power to implement such formulas. The Board has been held by the Court of Appeal of this province to have what it terms as a broad discretion and a large jurisdiction in its choice of methodologies

Page 41 monitoring mechanism instead, and I guess, from the perspective of the Consumer Advocate, a monitoring mechanism is okay, but it doesn't provide the type of protection that I would expect for consumers. You take Hydro's case as an example. Hydro could over earn on its equity by two million dollars basically before there would be any trigger at all, and on an allowed margin of profit of say eight million dollars, Hydro could earn 25 percent more than that without triggering anything. So really a monitoring mechanism is the least that consumers would expect.

Now, Dr. Cannon's proposal is not perfect but it uses and attempts to use the best information available to us which we tested and scrutinized in this hearing, which in our respectful judgment is better than ignoring likely changes to the embedded cost of debt, particularly given their significance to Hydro's overall return on rate base. And as I pointed out in my brief, Hydro's proposed formula would ignore a major debenture being refinanced at significantly more or less cost than is reflected in the test year, with no

scrutiny at all.

25

So Hydro acknowledges that Dr. Cannon's proposal would not be administratively burdensome. It would not disincent it from seeking out the lowest cost financing, which are very key considerations. But I'd also like to point out that Dr. Cannon's recommendation, as the Board knows from his evidence, was made in a context of the Board having previously stated that it would run contrary to a formula to make annual adjustments to the cost of debt as it changed. So there was a confines that we were frankly trying to work around, in terms of putting forward a proposal to the Board in this matter. Frankly, I don't have a lot of time personally for trying arguments that are identical and coming up to the same result. So there was a bit of a different tact taken by ourselves in this regard. So in light of that, he proposed forecasting the debt cost for the formula at this hearing using the best information available.

Now, Hydro has not, in this proceeding, updated evidence as to what formulas are in

Page 43

place in other jurisdictions. There's no evidence in this hearing that there are any utilities elsewhere that have automatic adjustment mechanisms where the embedded cost of debt is held constant each year during the life of the automatic adjustment formula. In fact, the evidence of Mr. Bradbury, when he was asked by Vice-Chair Whalen whether Hydro in preparing its proposal looked to any other jurisdictions in Canada that also used similar mechanisms, and Vice-Chair referred to B.C., the NEB, Ontario, to see if any aspects of those mechanisms would be applicable or not in this jurisdiction for Hydro's circumstance, and Mr. Bradbury said that in their perusal, they were unable to find a mechanism that was similar to the one that's in place in Newfoundland and Labrador. So that is what the evidence is in this proceeding. But in addition to that, Dr. Cannon did testify that in Ontario they do update the cost of equity and the cost of debt annually, and I provide the citation for that evidence in my written brief, in setting the revenue requirement.

Page 44 does not want to go this far as say Ontario, and as was suggested previously as an option to consider by Grant Thornton, then our submission is that in fairness to both ratepayers and Hydro, the Board should build into the ECD values, for years beyond the test year, the effects of changes to Hydro's capital structure and financings that are at least forecastable. So it's not a perfect solution frankly, but it's better, we submit, than letting the current formula ride in the case of Newfoundland Hydro, because we believe that it would be ignoring real and substantial differences in the make up of Hydro's return on rate base vis-a-vis that of Newfoundland Power to simply adopt the modified formula. And in the alternative, if that proposal is not accepted, my position on the part of consumers is that we just adjust the cost of debt annually and I agree that there is additional regulatory burden involved with that, to some degree, but let's do it, have a look at it, judge its effectiveness in a few years time. I can't see that in the interim

it would work an injustice to either the

So I guess the point is that if the Board

certainly do not view this as casting aside

reporting requirements that are being made.

ratepayer or to Hydro, and there might be some benefit into trying alternative arrangement to see how it works.

With respect to the reliability policy and those initiatives, in our brief, we have put forward a proposal calling upon the Board to direct Hydro to develop a plan documenting its approach that will ensure acceptable distribution reliability performance going forward. The plan, we submit, should identify targets for reliability, a plan for meeting those targets and a tracking mechanism for monitoring performance relative to that plan. And the plan should be consistent with a distribution reliability policy approved by the Board. The plan would be, as we envision it, the initial filing under the new policy.

We also propose that Hydro review current reporting requirements and make any recommendations that they might make for streamlining the process, and in particular, eliminating any reporting requirement that may be duplicated by the reporting requirements stemming from the new distribution policy, and I think I should point out here that we

We rather see it as fitting in with an overall distribution reliability policy, to a large degree. I guess, as I've said in my brief of argument, you know, these GRAs, I guess thankfully, only come about ever so often and they do provide an opportunity for intervenors, whether they be me or the Industrial Customers or Newfoundland Power or whomever, to bring forward ideas and proposals aimed at improving the regulation of utilities in our province, and I believe that improvement can take place, and that's why we put forward this proposal.

Page 46

Page 48

I think the context is important here, and I guess here's where I'm coming from with it. Obviously we all know that consumers have a right enshrined in the power policy of the province to have power delivered to them at the lowest possible cost, consistent with reliable service. We also know that Hydro says that it's committed through operational excellence to ensuring that customers indeed have appropriate levels of reliability at the

Page 47

Page 45

lowest possible cost, and as I've said, consumers have a vital interest in Hydro achieving operational excellence. And we also know, from Hydro's evidence, that consumers want reliable power, but they want their rates to remain as low as possible, because as we passed along in reference in part of the cross-examination to the commercial customer survey, I mean, it was so very telling that the commercial customers, even those who said that they would lose money, for instance, after an interruption, still only a minority of those were prepared to pay any more. It's very telling as to how cost conscious the customer is.

We also know that it costs significant sums to ensure present levels of reliability and that as you aim to improve upon reliability, that can and likely will cost more money. We also know that Hydro is stating that despite detailed reporting requirements to the Board as to its reliability performance, that Hydro is of the view that "significant improvement of reliability for its retail customers is

desirable and should be targeted." So in our view, Hydro has not quantified the extent of the reliability problem, and that's because Hydro has not established a standard or target level of distribution reliability performance against which current performance can be compared, and I guess, in our submission, it's hard to know where we are going if we haven't tried to set out our destination, and I don't mean an interim destination about a 20 percent improvement over a five year. I mean what constitutes acceptable reliable service.

I note that Mr. Haynes' evidence says that, "look, we have a fair bit of ground to cover if we want to be equal to the CEA's composite levels." So I ask, do we want to close that gap? Is that the destination? I don't know. At page nine of Mr. Haynes' evidence, he said, look, he said "there's quite a bit of room to cover to close the gap with Newfoundland Power," and then he says "now, I'm not suggesting that we will close that gap totally." So again, I don't know what the ultimate destination is. It's just not clear, you know, so I ask some questions,

now, I mean, it's difficult to tell a consumer

Page 50

Page 52

Page 49 you know, should the closing of the gaps be the ultimate destination or should a target be chosen that takes into account the challenges in Hydro's service areas with customer expectations and obviously engineering judgment? That has to apply. I don't take any issue with that.

I also ask, is it appropriate and

I also ask, is it appropriate and sensible for Hydro to distinguish between regions or systems? It seems to be an accepted fact that some areas tend to have less reliable service than other areas. It's quite a common phenomenon. It's nothing to do with preferences. It's just the way it is. It would cost a lot of money to get certain areas up to the level of say an urban area. It's a widely known phenomenon.

18 (11:00 a.m.)

So I agree with, you know, Mr. Ed Martin. I thought his evidence was quite clear, straightforward, direct, that when he said "look, we have to know what the minimum standard for reliability is that has to be achieved." His evidence was replete with those types of references. So I guess, right

what reliable service means, and in our submission, we ought to be able to put some definition around that and not with a view to penalizing Hydro if it falls short. I'm frankly not interested in that. We all know there's challenges and Hydro has a dedicated work force and management team, but something that enables us to audit a bit better. Like Mr. Bowman said in response to a question from Vice-Chair Whalen, he said "what we're talking about is a policy that establishes some criteria and whether you define that as a minimum criteria where there's penalties applied or whether you establish it as a benchmark, that's totally up to the policy." He said the issue to him and to me isn't what you set, it's just that you need a policy that sets some kind of audit trail, in our respectful submission. So that's the first thing, the setting of some standards, targets, maybe a band of reliability that is realistic, as Mr. Martin suggests. Maybe it's tied to past performance level, as apparently they did

Page 51

avoid the apples versus oranges debate and chasing each other around the room as to what standards is the one we adopt.

So then when we know what the destination is, then the question is, okay, we know the destination, now how are we going to get there and how long will it take us? How much is it expected to cost? And depending upon the target arrived at, the band, it may not get done in a year or two years or three years or four years. So obviously, we need a plan for achieving these targets in a manner that provides the greatest value to consumers. Then, consistent with operational excellence, we need a mechanism for tracking and comparing the performance relative to the plan to ensure that Hydro is meeting its targets on schedule and within budget. So we propose that this could be done by Hydro providing a performance report annually that assesses the results and effectiveness of the previous year's actions so we can track it. Now that, in our view, would offer

or is broken, but the question is can we improve? Can we learn from others? We've heard through the evidence of Mr. Bowman that Delaware, for instance, does have a monopoly system on distribution and transmission, but it has a formal reliability policy. Now certainly, as Mr. Bowman indicated in response to questions from the Vice-Chair that certainly the setting of reliability standards for utilities has been driven, to some degree, perhaps a large degree, by deregulation, but, in my judgment, that really doesn't take away from the transferability of some of their ideas for our jurisdiction.

in Delaware, instead of a CEA composite, so we

Hydro's brief suggests that concerns from other deregulated jurisdictions that have resulted in the establishment of reliability policies are not entirely relevant in this province. Well, maybe that's where we have to modify such policies, as I say, by getting rid of punitive penalty sections as a for instance. But I would think that this Board and consumers in this province have no less an abiding interest in ensuring that customers have a reliable system and ensuring that the

improvements and again, that's not to be taken

as saying that the way we do things is no good

Page 53 Board and consumers have a better way to audit performance than do regulators in these other jurisdictions, and I would harken back to the comments of the Chairman that, an excerpt of which appears in Mr. Bowman's evidence, when Mr.--Hydro's then CEO, Bill Wells was on the stand, who is now, I understand, enjoying the unmitigated pleasure that can only come with a private law practice, but you outlined when he was on the stand that there's an asymmetry of information and that the focus in the sense of regulation has to be on performance measures and benchmarking if this is going to work at all.

Now, I agree with that, and I believe that, you know, the intervenors are no match for Hydro when it comes to being able to bring expertise and data to bear on an issue, whether it be reliability or many others. Hydro knows its system best, but we all have a job to do here and my job, of course, is to ensure that consumers are, in fact, getting reliable service at the least possible cost, and that's what we all want. So I present this as an improvement, a tool to better allow

us to meet that obligation, meet that objective, and as I pointed out, and I've quoted extensively in our brief from Mr. Martin's evidence, I mean his evidence is replete with references to "listen, you got to start with that standard." So much falls out of that standard. You got to get that right, and then you build on that. It makes perfectly good sense.

Page 54

Page 56

The unfortunate thing is that Mr. Haynes' evidence, who is looking after this part of the shop for Hydro, really doesn't give consumers an assurance or much to look forward to as to when we might be able to receive this, because his evidence, in one part, says, you know, "not saying it's not a good idea. It could be X years," or at one point, 25 years, I mean, "we'll see. We'll get to it." You know, I mean, and another point in his evidence, he suggests that, you know, "once we get to the area of where we all think that we have an acceptable level of service, well then we could look at putting standards in place." I mean, that's totally circular in my view. I just don't understand that process.

23

24

25

So Hydro has stated in its brief that an iterative process is currently under way, and they indicate that there's an--the first step is to establish a band of reliability which will assist in the preparation of a long-term, comprehensive maintenance plan, which it will use in support of capital and operating expenditure decisions. Now, Mr. Haynes spoke about that in his evidence and he said, you know, the focus was going to be on the maintenance tactics on the assets themselves, but he did point out that we're going to be starting with a clean piece of paper. So you know, there seems to be some movement perhaps in Hydro towards this regard. It's a bit unclear to me exactly what it is, but my concern here is that I think we need the Board direction to ensure that we're getting off on the right foot with this, and again, absent that, I don't believe that we'll get what I think is needed in a timely fashion. So, you know, in summary, I basically ask some basic questions. Is there room for

level of distribution reliability performance against which performance can be compared? Is the setting of reliability parameters high value, as Mr. Martin indicated? Would it be of value for Hydro to report annually to the Board as to what its current objectives and planned actions and projects are, and then to report annually as to how it did on doing that? Is the proposal consistent with the Board's duties to implement the power policy of the province? Is it consistent with the goal of providing power at the lowest possible cost to consumers, consistent with reliable service? I think the questions should be answered affirmatively.

Regarding the peer grouping benchmarking and tracking of reporting of additional performance indicators, I'll just be brief on this. As regards peer group benchmarking, our brief proposes that the Board direct Hydro to initiate reporting of key performance indicators found in Exhibit JRH-1 with performance externally benchmarked to a comparable peer group beginning with 2006 for the non-reliability data, and we submit that

improvement in our system? Is it reasonable

for Hydro to establish a standard or target

Page 57 Hydro should report the non-reliability related performance data by no later than the KPI report on 2007 performance. However, the reliability related performance should be reported for the peer group in the next KPI report, since the information appears to be readily available. And in order to enhance the ability to trend the performance, data for years dating back to at least 2003 should be used, as Hydro already has the historical data for the reliability.

Mr. Bowman agrees to assist Hydro with the identification of a peer group and sources of information relating to the external benchmarking undertaking.

As regards the business of tracking and reporting of additional key performance indicators, this is--you know, sounds all pedestrian, I understand that, but the business about tracking the number of customer complaints per X number of customers, the percent of calls answered within 30 seconds, percent of customers outage calls answered, percentage of new customer services installed and energized by the date promised. I mean

tracked. 25

Page 59 I'd like to just touch briefly on the conservation efforts. I don't think that there is a huge amount of rancour over this, given the current recent developments in Hydro. I should say, I mean, I welcome the increased focus by Hydro on its conservation effort, as outlined in its application and its evidence. It's very important to our system and to consumers generally that conservation be followed up on, and I'm very much looking forward to the study, the results of the study and Hydro's goals and plans coming out of the study that Hydro is undertaking. But one relief that I am seeking is that in recognition of the fact that Hydro is in the process of examining what different types of programs that it might implement in this province, what we would respectfully request the Board to do is direct Hydro to bring forward a plan aimed at educating electricity consumers of the relative cost of electricity and oil for heating and water heating purposes by way of regular updates to consumers with

it's not exactly riveting stuff but there is a tie in to operational excellence. I mean, it is a service issue. I mean, goodness knows Hydro tracks a lot of other data in its surveys and everything else, and you know, the point is, like the McKinsey report that was referenced in Mr. Bowman's evidence, I mean, these are a lot of times where rubber hits the road for consumers, as to, you know, how they look upon the service they're getting from their utility. I mean, there is an importance attached to these things, and you know, finally, in terms of the burden that this may place upon Hydro, there is a burden, there's no doubt about that, but I mean, we got to be realistic that Vermont has a little tiny utility where they annually and regularly track this type of material. I think it's Barton Village. I mean, this is not new stuff, and whether it's as high up on the pecking order as in terms of the importance that consumers attach to the issue as cost, for instance. No, it's not. It's not to say that it's not important and shouldn't be Page 60

I think the Board is aware, from my brief, of the particular request for information that dealt with the relative cost differences. I guess the bottom line is that none of this information is readily available to consumers, and I agree with Mr. Martin that, you know, they do have a responsibility. They are the ones ideally suited for getting this information to the customers. Who else can be expected to do this on a regular basis? And I think an educated consumer is a good consumer, and it's in that vein that I suggest that. Otherwise, I look forward to the results of Hydro's study.

With respect to the integrated resource plan, we, and I think it's fair to say that the Industrial Customers too, didn't get into a great amount of depth as to the merits in our written submissions on the IRP, because as we pointed out at the start of the hearing, we were more interested in having a mechanism to come back before the Board on the issue. At least that was where my head was. So I'm not going to get into a debate of the BC plan with their binders. There's some evidence, not

their electricity bills and such other

effective means as may be identified.

Page 61 before the hearing, but Nova Scotia has been taking a look at this as well. It mightn't be similar to BC. Tdon't think it's useful to get into what exactly it should look like, but 5 I guess the—what the thrust for me at least was is that we don't want to be into a 7 situation where we defer looking at the 8 integrated resource plan indefinitely, and 9 that's why there's some sort of time ban that 10 I've proposed around coming back before the 12 appropriateness of the 18P and getting it initiated. 13 initiated. 14 (11:15 a.m.) In that regard, my brief is clear on the 16 point, and I'll say really not much more 17 beyond that. Except to say that there's a 18 level of discomfort in Hydro's brief for me in 19 that if the release of the energy plan gets delayed unduly, we are really—we're really 21 stuck under their proposal of not being able 22 to do anything with it, and as my brief 23 pointed out, there's no real legal or 24 jurisdictional impediment to taking a look at the whop on first get into this process and an enjoyable one, by times, and I guess like 4 Mr. Marin said, vou don't know what to expect 5 when yon first get into this process, but 1 was welcomed. 50 thank you alvey much. 11 CHARMAN: 12 Q. Page 65 process. Secondly, with respect to long range system planning and integrated resource planning, and finally some comments on costs; the Industrial Customers having made an application for costs.

With respect to the settlement process, I just want to reiterate a comment that's been made by the other parties and is made in the Briefs that from the perspective of the Industrial Customers, it did represent a thorough and rigorous review of Hydro's application and of the evidence. As pointed out by Hydro in its final argument Brief, all parties were represented by legal counsel and supported by expert consultants and that was no less true of the Industrial Customers. And I think I would go further and say that it wasn't just a matter of their being on standby in case the matter went to a hearing, but in fact, those advisors, consultants, on behalf of the Industrial Customers and the other parties were actively involved throughout the settlement process.

The settlement process, in the view of the Industrial Customers, and the model that was used in this particular hearing, had tangible positive results, quite apart from the rates that were achieved, if the settlement agreements are, in fact, accepted by the Board, that will be achieved. The tangible, positive result was that the process itself was less costly, more timely, particularly when we bear in mind that the application itself wasn't filed until August of 2006. And I think it's not unfair to speculate or to contemplate how much more hearing time would have had to have been spent if the number of issues that were addressed in the settlement agreements had had to have been contested in a hearing, and from the perspective of the Industrial Customers, a more efficient process.

Page 66

Page 68

Hydro, in their final argument at page six, estimate that savings, estimates in savings in regulatory costs of \$250,000 in 2007 and the Industrial Customers would understand, and Hydro can correct this if this understanding is incorrect, that much if not all of that saving is due to the settlement process and the settlement agreements having

think, the Consumer Advocate, we would have 1 2 hoped that Hydro would have seen or would have 3 indicated in their submissions a greater openness to engaging in this process sometime 4

5 in 2007, notwithstanding whether or not the Provincial Energy Plan is issued in 2007. 6

7 That is everyone's hope and expectation, but 8 no one can say that for certain. Certainly

9 its been the position of the Industrial 10

Customers that it is not a necessary precursor

to integrated resource planning.

Why does integrated resource planning need to start in 2007? The concerns of the Industrial Customers are, I believe, best identified and summarized in the pre-filed testimony of Mr. Patrick Bowman and Mr. Andrew McLaren, dated October 23rd, 2006, and starting at page 39, and I don't intend to read through that evidence, but what I think Mr. Bowman and Mr. McLaren do there is they combine, in three or four pages, all of the issues that are facing Hydro and by extension, Hydro's customers, in the coming short to midterm with respect to identifying and developing new sources of supply, with respect

been achieved. The Industrial Customers' own cost of participation in the settlement conference were considerably less, \$300,000 less, than what they had been in the 2003 GRA. So a 50 percent, less than 50 percent of the cost. But notwithstanding that, the process did reflect due scrutiny by the parties and due process involving the Board as well in the hearing that we had in January and with respect to the participation of Mr. Kennedy that's been adverted to. So in conclusion, with respect to the settlement process, the Industrial Customers would like to leave the Board with the submission that this settlement process model is one that should be encouraged for future proceedings. We can't always be assured of the same results, but certainly, I think we can be assured that based on the experience in this matter, all parties will come to such settlement processes in the future with a very constructive and positive frame of mind as to what may be able to be achieved.

If I may make a few comments then about

integrated resource planning, and as with, I

Page 69 to demand management, and I think what Mr. Bowman's pre-filed testimony indicates is that it's not a matter or shouldn't be a matter of looking at each of these items in isolation or in a piecemeal fashion. They have to be looked at in, to use the term, an integrated fashion, weighing the costs and benefits of the various options, and as Mr. Bowman points out, there is never perfect information when one engages in these exercises, and I would submit that waiting for a Provincial Energy Plan or setting that as a necessary precursor to integrated resource planning is setting up a condition of "look, we have to wait until the conditions are perfect."

With or without a Provincial Energy Plan in 2007, the parties, not just Hydro, although certainly its the position of Industrial Customers that Hydro should be taking a lead in this, will need to roll up their sleeves and start getting to work on resource planning, integrated resource planning. The fact that there will be a Provincial Energy Plan will be one of the inputs into that, but it's not the sole one, and it should not

become the driver or an impediment, in the view of the Industrial Customers, to proceeding in a timely fashion with integrated resource planning.

Page 70

I would also refer the Board to the responses to various RFIs, NLH 34 IC, NLH 37 IC, NLH 33 IC, and NLH 42 IC, responses with respect to various questions posed by Hydro regarding integrated resource planning. The view of the Industrial Customers that there's sufficient evidence before the Board to make the order that's being requested by the Industrial Customers and that has also been requested by the Consumer Advocate that either any time after sixty days after the release of a Provincial Energy Plan or, if it becomes apparent by the end of the second

quarter or June 30th of this year that the Provincial Energy Plan is not going to be released by that time frame, then in any event, that any party would then have the ability to come back before the Board and apply for direction from the Board as to how to best proceed with the integrated resource planning process. If, as part of that application, the proponent of that application must make the case as to whether an integrated resource planning process makes sense at all, well so be it. That argument can be made at Certainly, the Industrial that time. Customers though would hope that by that time, Hydro, with the Consumer Advocate and the Industrial Customers and Newfoundland Power, would see the merit in, rather than having to have a generic hearing as to whether integrated resource planning is necessary, would see that time as better spent with sitting down amongst themselves and with the input of the Board as necessary, to determine what type of model of integrated resource planning is appropriate, as opposed to whether

I do want to make a few comments with respect to the model. Hydro has emphasized in their final argument the model that was used in British Columbia. Certainly, it is not the position of the Industrial Customers that we should follow the model of any particular jurisdiction with respect to integrated resource planning. We certainly accept that there are aspects of the regulation here in Newfoundland in respect to hydro generation, the fact that we are not interconnected, a number of other unique factors which all point to developing a model which addresses those particular factors which are unique or which are found here in Newfoundland and Labrador. From the Industrial Customers' point of view, that is best achieved by way of consensus, by way of the parties meeting and discussing this amongst themselves as opposed to having a generic hearing, where the tendency, I think, would be to be more adversarial, and also I think an unnecessary cost, quite frankly. Certainly at the end of the process,

assuming that the parties could agree that

it's appropriate at all.

22 CHAIRMAN:

24 VICE-CHAIR WHALEN:

Q. No, thank you.

Page 73 yes, we should embark on a process of 1 2 discussing what a IRP should look like for Newfoundland Hydro, certainly at the end of 3 the process, the Industrial Customers 4 recognize that at some point the matter would 5 6 have to come back to the Board, whether it's 7 through a generic hearing or some other 8 process, for final approval. But we don't see that generic hearing as necessary at the 10 beginning of the process, but rather at the 11 end. 12

Finally, I'd like to make a few comments with respect to the cost application of the Industrial Customers. I appreciate the recognition of Hydro and Consumer Advocate that they view the Industrial Customers' participation as constructive in the settlement process and certainly we would echo that from the Industrial Customers' point of view, that they viewed the participation of the other parties, the Consumer Advocate, Hydro and Newfoundland Power, as also having been constructive across the Board with respect to all of the issues that were addressed in the settlement agreements, and

for that matter, in the issues that couldn't be addressed by the settlement agreements and had to be left aside. On all of those issues,

3 4 I think there was a bona fide attempt by all

5 parties to try and arrive at common ground or 6 consensus, even where that wasn't ultimately 7 achieved in respect to some of the issues,

like integrated resource planning.

With respect to the measure of costs, there's already been considerable submissions, written submissions have been filed on behalf of the Industrial Customers, but I do want to comment on the submission that was made by Mr. Young with respect to the past experience, past precedent, if one wants to call it that, represented by the award of costs to the Industrial Customers in the 2003 General Rate Application. Mr. Young characterized the award there as having been a little bit more than half of what had been sought or claimed by the Industrial Customers. Our comment there would be that we don't see the exercise of the Board's discretion with respect to costs to be one that ought to be circumscribed by percentages or by what might have been the

1 CHAIRMAN:

percentage of the award that was awarded in a 1 2 previous hearing, that your discretion should 3 be exercised based on a review of the costs and the cost substantiation as submitted, 4 5 recognizing and we've already recognized, I would note in the submission and have proposed 6 a discounting to reflect that there may be 7 8 some time interweaved in those accounts that 9 might not be beyond argument associated with the General Rate Application. But even beyond 10 11 that, I think it would not be the appropriate 12 principle to say well, because we awarded 55 percent in the 2003 GRA, that's what we should 13 be awarding in this GRA. I think what needs 14 15 to be looked at is the accounts that are rendered and the PUB exercises its discretion 16 17 based on that, to see whether there's been a contribution that can be identified by way of 18 19 those costs having been incurred. Mr. Chair, Madame Vice Chair, those are 20

Q. I just have one, Mr. Coxworthy. I guess it relates to the issue of integrated resource planning and the energy policy review being conducted by Government. Quite clearly, the Board has a role now with regard to the supply aspect, as indicated under the EPCA. One could argue that that, there has been an element of disconnect between that and what's happened there over the years, in recent times in any event, and any submission, and we did make a submission to the Energy Policy Review, reflected on reconciling that disconnect one way or another. I guess confirming it, or indeed, taking that authority away, if indeed we're not going to be in a position to exercise it, and that clearly may--what Government decides to do with that, if anything, may very well, from our perspective, colour, if you will, our involvement in integrated resource plan. And I think I

understood from your argument that you're saying that we need not wait for that Energy

Policy Review to be concluded and that we

should, you know, proceed, if there appears to

all our submissions. Thank you.

O. Commissioner Whalen?

	Page 77	
1	be an imminent further delay in that. Could	1
2	you just, you know, generally comment on that	2
3	for me?	3
4	MR. COXWORTHY:	4
5	Q. I think, there's no question that the	5
6	Provincial Energy Plan, when its released,	6
7	will have to be a necessary input and have to	7
8	be taken into consideration with respect to	8
9	integrated resource planning. Having said	9
10	that, and what was being proposed by the	10
11	Consumer Advocate and by the Industrial	11
12	Customers is that there's no reason why we	12
13	can't start someset some of the framework up	13
14	for moving forward with an integrated resource	14
15	planning, even in advance of Provincial Energy	15
16	Plan, by establishing terms of reference,	16
17	setting some milestones on a go forward, which	17
18	and the same of th	18
19	the intervening period a Provincial Energy	19

	Page 79	
Ι.		

terms of reference were established, leaving them flexible enough so that they could take into account, and would have to take into account, the Provincial Energy Plan once it's issued. But I think there is work--in the view of the Industrial Customers, there is work that can be done in terms of establishing a framework, even in advance of a Provincial Energy Plan, that an IRP is going to be necessary regardless. It may take a different form, a different shape, because of the Provincial Energy Plan, but we don't see that a Provincial Energy Plan removing the need for an IRP, and we only see advantage to starting the process earlier rather than later.

Page 78

Page 80

Q. Certainly I think since we heard the evidentiary sort of phase of the hearing in early January, I thought I read somewhere where the Premier has come out and said that it's likely that the Energy Plan will be released in the first quarter, which may answer the question, and whether that will be in the form of a discussion paper for further

circulation and discussion and decision making at a later date, I guess, remains to be seen.

3 But it seems there might be something imminent on that front in any event. Okay, thank you 4

very much.

6 MR. COXWORTHY:

Q. Thank you, Mr. Chairman. 7

8 CHAIRMAN:

1

2

Q. Good morning, Mr. Kelly.

10 KELLY, Q.C.:

11 Q. Thank you, Chair, Vice-Chair. I'd like to 12 take a few moments first and spend a little bit of time just talking about the negotiation 13 process and some of the lessons kind of 14 15 learned during that process. In my opening comments, I addressed the benefits achieved by 16 17 the negotiated approach to the resolution of issues, including the revenue requirement, the 18 19 process results in regulatory efficiency, saving costs for the parties and ultimately 20 21 for customers, and its in keeping with sound 22 regulatory practice elsewhere in Canada. The 23 experience in dealing with Hydro's negotiated settlement indicates to us that there are a 24 25 number of factors which assist in a successful

negotiation, and I'd like to touch on four of them.

The first is the commitment to the process, and in Hydro's negotiated settlement, all of the parties were committed to the process and worked hard constructively to resolve the matters in issue, and other counsel have touched on that.

The second factor which I think clearly became important is information. meaningful negotiation requires important information, and you find that information in the application, in the reports and in the RFIs, and those components will continue to remain critical as we explore negotiated solutions in the future. All of the parties, and ultimately the Board, have to do due diligence on the ultimate result of whatever is achieved and having that information still becomes critically important, whether its a negotiated process or ultimately a test in a matter before the Board.

The third component, which I think we all identified, is that the process needs to allow sufficient time. The process of negotiation

Page 81 requires more than just a few days. It needs time for common meetings, for separate meetings, for consideration. Allowing sufficient time however doesn't simply mean that time lines can be ignored or that the process doesn't have a structure, and I think one of the lessons learned out of this process that we perhaps need to do a little better with the next time around is establishing a process with sufficient time, but also with sufficient structure so that it can move forward in a proper fashion. But this has been a learning experience, I think, for all of us, and allowing sufficient time within a structure is an important component for moving forward.

The fourth factor which we at Newfoundland Power believe is important is the participation of the Board and the Board's facilitator, in the past case, Mr. Kennedy, is a critical component. We believe Mr. Kennedy played an important role in the process and we believe that in future negotiations a facilitator, whether it's Mr. Kennedy or somebody else, should continue to play an

important role in the future. And that's not to say that the facilitator has to be involved in every step of the discussion or be there for every meeting, but he plays an important role in facilitating the process and in ensuring a flow of information as to where the parties are in that process.

Page 82

Page 84

So those are some comments on what we think are valuable lessons learned from this experience, which has led to a successful negotiation in the case of Hydro's application.

Newfoundland Power supports the negotiated agreements that have been reached in this case, and submits that the Board should adopt those agreements on the issues which they've resolved. We believe that they represent a principled consensus and a reasoned consensus on those issues, and I echo Mr. Young's comments that all of the parties here approached these negotiations very much on a principled basis.

23 (12:00 p.m.)

With respect to the matters which remained unresolved and are before the Board

Page 83

for decision, our brief summarizes our position on those, and I'll just touch on each of them very quickly.

First of all, with respect to the automatic adjustment formula, we support Hydro's proposal. We do not support Dr. Cannon's proposal to adopt forecast future costs for debt. I note first of all that if there were no formula, debt, like any other cost, is simply a cost dealt with on test year values that then remain unchanged as you go forward. All the formula does is to allow a change flowing from the rate of return on equity then through the formula to generate the return on rate base. As Ms. Butler pointed out, no other jurisdiction in Canada adopts Dr. Cannon's proposal and so we do not believe it is in accordance with sound public utility practice.

Not only that, frankly, it creates an illusion of precision which doesn't really exist, because as you heard in the evidence, forecast interest rate costs can change significantly over a period of time. And secondly, in fact, it may lead to

inappropriate adjustments. You've heard in this case that some of Hydro's other costs, depreciation, labour costs, will in fact increase, so adjusting one factor without adjusting other factors is frankly not a principled approach. And so, the logic does not dictate that one adjusts other costs individually. The test year process is in place and so if an automatic adjustment formula is to be adopted for Hydro, it should use the determined embedded cost of debt that flows from the test year.

The second issue to touch on is the IRP process. There is an important process under way in terms of the Provincial Energy Plan. Considerable time and effort has been invested in that process, and as the Chair alluded to a few moments ago, we understand that that is to be released in the next several months. So it frankly does not make a lot of sense to us to start a process until the content of the Energy Plan is determined and then the role of all of the players, including the Board, is known from that Energy Plan. So we believe that simply deferring that issue until we see

	Page 85
1	what the Energy Plan is going to say is the
2	logical step to follow. We don't have a
3	particular problem with the Board allowing the
4	parties to make application to bring the issue
5	back before the Board. In essence, the
6	parties always have that power, in any event.
7	I think the important thing is that we see the
8	Energy Plan first, see what it's going to say
9	and then we'll have a sense of where this
10	process needs to go from there.
11	The next issue I'd like to touch on is

The next issue I'd like to touch on is reliability and frankly, sitting here from a utility's point of view, we're, I think, a little surprised by the degree of discussion that has flowed out of what was a statement of a high level corporate objective by Hydro to try to improve their reliability performance by some 20 percent. That high level objective should not be confused with what actually takes place in an electrical utility, and you've heard Mr. Haynes explain how it actually works in practice. One actually looks at individual lines and feeders and assets to determine what is necessary, and then there are two components. There's the

Page 87

1 2

within the existing framework for maintenance and capital expenditures which already exists.

Next, I'll just touch on the peer group benchmarking. We have no problem with Hydro's proposals in that regard. As indicated in our brief, we point out that one must take considerable care in attempting to draw meaningful conclusions from comparisons with other utilities. As you've heard in the evidence, there are considerable differences, both in terms of the isolated nature of our system and the difficulty in drawing comparisons and we simply point out that that continues to be an issue, but we have no difficulty with what Hydro proposes to do.

Oil price and hedging, I don't think I need to say anything about. There's no evidence before the Board to warrant any change from existing practice. That issue has been looked at previously and with respect to conservation, there is now an important process under way with Hydro and Newfoundland Power's participation to look at a conservation program, what effectively can be done, and that program, that study, needs to

maintenance component and there's the capital replacement component. Well, in terms of maintenance, this Board is now going to approve, hopefully, what has been agreed as part of the negotiated settlement, a budget, an amount for Hydro's revenue requirement, and Hydro is going to operate its maintenance program within that approved financial parameter, and when it comes to capital expenditures, any capital expenditures by Hydro will come before the Board for approval. So there is a mechanism already in place to have the utility operate within previously approved or to be approved expenditures in the case of capital expenditures within a budget, and so that framework is in place and really nothing more needs to be done over the next several years, as Hydro works within its test year requirement.

Page 86

Page 88

That will, of course, give Hydro an opportunity, as Mr. Martin has explained, to get a better handle on where they believe they need to go with maintenance issues, but for the Board to deal with this at this point in time really seems unnecessary and especially

be allowed to run its course. I don't think there's a serious issue on that point.

Finally, with respect to the issue of costs, in terms of the Industrial Customers, that's a matter for the Board's discretion.

We take no particular issue with it, save for the important point raised by Vice-Chair Whalen and addressed by Mr. Young, it is important, of course, that it be within the existing revenue requirement which the Board is approving, because rates have been determined based upon that revenue requirement and rate certainty at this stage is a very important critical consideration, both for the Board, I'm sure, for Hydro and certainly for Newfoundland Power.

Finally, I'd like to thank the Board, the Board staff, all of the other parties and all of the other counsel for their cooperation and courtesy throughout this process. We believe that important steps have taken place through this hearing, in terms of the regulatory framework in this jurisdiction, in particular the success of the negotiated arrangements in this particular case, and hopefully we'll be

Fe	ebruary 13, 2007 Multi	-Pa	ge [™] NL Hydro's Revised 2006 Rate Application
	Page 89		Page 90
1		1	an RFP and the consultant who is hired will
2	we go forward in the future.	2	identify a host of initiatives relative to
3		3	conservation, and not only will they identify
4		4	the list, but they will also indicate to the
5		5	utilities where they expect to get the best

25 MR. YOUNG:

Page 93 Q. Thank you, Mr. Young and Ms. Butler. I guess this brings to a conclusion this particular public hearing. Again, while we reserve the right to reconvene on any matters at the call of the Chair, I sincerely trust that that won't be necessary. It is the task of Ms. Whalen and myself to now sift through the evidence, I guess, presented during the hearing including the settlements agreements and render as fair and equitable and expeditious a decision as possible. I do, as well, want to thank all the parties for your significant work and cooperation throughout the hearing, particularly in reaching the settlement agreement. This, as most people have commented on, indeed, is new territory for us all, I think, in terms of the utilities GRA, the result in achievements, in terms of reduced hearing days from 61 to 35 to, I guess, it's roughly around four now, indeed has been dramatic. The considerable rate reductions negotiated for domestic general service and Industrial Customers has been significant. And we hope at the end of the

cost savings have been achieved as well and I think from some of the comments in respect of savings, in particular, those have been significant for certain parties.

Page 94

Page 96

And all these, I think, speak to the considerable effort put forward by each of you on behalf of your respective customers. While I don't anticipate that the level of agreement, while I'm optimistic, I realistic as well, that the level of agreement which has been reached here would constitute a practical outcome in all circumstances, it has, I believe, proven its worth is part of the public hearing process and will be certainly encouraged by this Board regarding future GRAS.

Having said this, as Mr. Young, I think pointed out this morning, the Board does reserve its right to render decision on the agreement that may not, in each case, reflect the unanimity reached by the parties.

22 (12:15 P.M.)

The Board will also be striving to work with the parties following this public hearing to see, indeed, what lessons were learned

Page 95

which can be incorporated in the future settlement agreement processes. And I thank Mr. Kelly for some of his constructive comments on those here today.

day greater regulatory efficiency and related

Let me again commend each of your for the settlement efforts put forward in this GRA and indeed, your valuable contribution throughout the hearing and I mean that quite sincerely. I also want to express my appreciation to the witnesses for their responsiveness and fairly direct way in which the evidence was covered in the few days that we had.

I want to also acknowledge the work of the Ms. Newman and Ms. Blundon for their efforts in ensuring that the hearing proceeded in a relatively seamless manner. And also recognize Ms. Dray who's always in the back of the room and perhaps is instrumental in all that we do, but because by virtue of the fact, she doesn't sit up here, get recognized to the tune that she should. And while, you know, things go fairly smoothly during the course of this hearing and certainly Ms. Blundon and, or Ms. Whalen, I should say, and I are the beneficiaries and indeed, all of us, there is

a considerable amount of planning and organization that goes on behind the scenes as well and we recognize that. I also want to acknowledge the efforts of Mark Kennedy who, again, from the comments from the parties, certainly appears to have played an instrumental and important role in this settlement process.

I also want to recognize those groups and persons who submitted letters of comment and especially those in Labrador West who made oral presentations via our video conference last week. And I think that that, from my perspective, in any event, proved to be fairly successful in relation to the limited representations that we did have from Labrador West. And it was fairly cost effective in addressing the manner in which we received those particular overtures. All the public input will carefully be reviewed and considered by the Panel, indeed, in making its decision. I also want to thank Terry O'Rielly of Hydro and Mike McNiven of the Board for their expertise in assisting us with the technical portion of the hearing. Also,

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	Discoveries Unlimited for providing the transcription services. And I guess again, for those who don't always get recognized, if you could, Bruce pass along to those who did work behind the scenes and I think late into the night in providing these transcription services to us on a timely basis. I want to recognize the continuing support and co-operation of my own colleague, Darlene Whalen, particularly since our work is just starting, to some degree, and Darlene did yank herself out of bed, I think, because I think that's where she was yesterday, to come in here today and I, indeed, thank her for that. In closing, we'll be proceeding with our deliberations in as continuous a manner as possible. It would be premature at this stage to try and speculate on when a final order may	Page 9 1 it. This hearing is now adjourned, unless 2 recalled by the Chair and that's an event hope 3 will not be necessary and thank you very much 4 everybody. Good day. 5 Upon conclusion at 12:20 p.m.
20 21	be issued, but certainly it's going to take a few weeks; there's no question about that. We	
22 23	will, however, take the necessary time to ensure that the order is fair, thorough and	
24 25	complete and have it available within the earliest, practical time frame. That's about
