

**Further to the reply to P.U.B. 13.1 for the customer growth of residential customer additions:**

**Q. What would be the cost savings to the system if new customers were required to use heat pumps or convect air as opposed to baseboard radiation. What would be the effect on energy sales and peak demand and requirements for new equipment?**

**A.** The Company has not completed an analysis on the cost savings to the system or the effects on energy sales, peak demand and requirements for new equipment if new customers were required to use heat pumps or Convectair<sup>1</sup> as opposed to baseboard radiation.

---

<sup>1</sup> Convectair is the trademarked name for a specific brand of radiant and/or convection type electric resistance heating.
