

**Distribution**

**Q. Explain why the average annual estimated 2006-2008 capital expenditure for “Rebuild Distribution Lines” is one hundred and twenty six percent (126%) higher than the previous five year historical average?**

**A.** Further to the response to PUB-54 NP, the process will continue into the following four years in order to rebuild sections of our remaining distribution feeders. Based on our experience during the early stages of the process, it is anticipated that additional work will be required to address deficiencies, once identified.
