1	(9:10 A.M.)		1	my basement and my garage. I maintain a
2	CHAIRMAN:		2	continuous temperature in the house of 22
3	Q.	So there are no preliminary matters I	3	Celsius. Unlike conventional wisdom, I
4		understand. Is there, madam?	4	don't set it back at night. It's the same
5	MS. GLYNN:		5	temperature day and night. The house was
6	Q.	No, there is not, Mr. Chair.	6	originally built like a lot of new homes
7	CHAIRMAN:		7	with baseboard heaters and there's about 20
8	Q.	So we have Mr. David Adams. Sir, do you	8	kilowatts of baseboard heaters installed. I
9	٧.	wish to make a presentation?	9	retrofitted the house in 2012. I started in
10	MR DAVID	ADAM IS HEARD	10	2012. I installed a couple of units. I was
11	MR. ADAMS		11	pleased with the performance of them and I
12	A.	Yes, I do, yes.	12	added an additional unit in 2014. So now my
13	CHAIRMAN:	· · · · · · · · · · · · · · · · · · ·	13	house is completely heated with mini-split
1			14	1 7
14	Q.	And we all have copies of it. So sir, you		heat pumps, all levels including the garage.
15	MD ADAMO	are on.	15	The brand I use is Panasonic which is not
16	MR. ADAMS		16	the top – it's not probably the best units
17	A.	Okay, thank you. I'm not sure if these are	17	out here, but it's not – it's probably one
18		on. They're on?	18	of the higher ends, but it's certainly not
19	UNKNOWN		19	the top unit, probably mid-grade brand name.
20	Q.	Yes.	20	And I've not used my baseboard heaters since
21	MR. ADAMS		21	November 2014. I also have the bonus of the
22	A.	I guess just an introduction. My name is	22	air conditioning in the summertime, and the
23		David Adams. I'm an electrical engineer. I	23	capacity there of the heating system that's
24		graduated from MUN, registered here locally	24	installed, the heat pumps are rated for an

Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today.	1 2 3 4 5 6 7 8	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum
1 2 3 4 5 6 7 8 9 10		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today. So this information is very recent. I only	1 2 3 4 5 6 7 8	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum heating demand is 20 kilowatts for the
1 2 3 4 5 6 7 8 9 10		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today. So this information is very recent. I only got the metering – I've had the heat pumps	1 2 3 4 5 6 7 8 9 10	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum heating demand is 20 kilowatts for the baseboard heaters, just a comparison, and
1 2 3 4 5 6 7 8 9 10 11 12		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today. So this information is very recent. I only got the metering – I've had the heat pumps in my house for maybe three, four years, but	1 2 3 4 5 6 7 8 9 10 11	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum heating demand is 20 kilowatts for the baseboard heaters, just a comparison, and only 5 kilowatts for the mini-split heat
1 2 3 4 5 6 7 8 9 10 11 12 13		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today. So this information is very recent. I only got the metering – I've had the heat pumps in my house for maybe three, four years, but I've only had the metering device in a week	1 2 3 4 5 6 7 8 9 10 11 12 13	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum heating demand is 20 kilowatts for the baseboard heaters, just a comparison, and only 5 kilowatts for the mini-split heat pump. So that's the input power to the
1 2 3 4 5 6 7 8 9 10 11 12 13 14		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today. So this information is very recent. I only got the metering – I've had the heat pumps in my house for maybe three, four years, but I've only had the metering device in a week - for a week. So it's very recent	1 2 3 4 5 6 7 8 9 10 11 12 13	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum heating demand is 20 kilowatts for the baseboard heaters, just a comparison, and only 5 kilowatts for the mini-split heat pump. So that's the input power to the mini-split heat pumps. It's much less than
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today. So this information is very recent. I only got the metering – I've had the heat pumps in my house for maybe three, four years, but I've only had the metering device in a week - for a week. So it's very recent information that I have. It wasn't done	1 2 3 4 5 6 7 8 9 10 11 12 13 14	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum heating demand is 20 kilowatts for the baseboard heaters, just a comparison, and only 5 kilowatts for the mini-split heat pump. So that's the input power to the mini-split heat pumps. It's much less than the output heat. Just so everyone can
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. Mr. Johnson asked me to present – he was aware of some metering I was – or comparisons I was doing on my own house, a comparison between mini-split heat pumps and baseboard heaters, and thought it would be useful to present this information today. So this information is very recent. I only got the metering – I've had the heat pumps in my house for maybe three, four years, but I've only had the metering device in a week - for a week. So it's very recent information that I have. It wasn't done over the coldest parts of the winter; just	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	output – the combined total output is 18 kilowatts, but that's at eight degrees Celsius, reduces to about nine kilowatts at minus 15 degree Celsius. They are rated down to minus 15, but they have operated below that and have not shut down. I'm not sure what temperature they would shut down at to be honest. They have never shut down for a cold temperature. And the maximum heating demand is 20 kilowatts for the baseboard heaters, just a comparison, and only 5 kilowatts for the mini-split heat pump. So that's the input power to the mini-split heat pumps. It's much less than the output heat. Just so everyone can understand kind how it's laid out in my
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17		with the Professional Engineering Association. I'm here as an individual today, not tied to any organization or business. So that's the input power to the mini-split heat pumps. It's much less than the output heat. Just so everyone can understand kind how it's laid out in my house, this is a room in the basement. You can see two baseboard heaters. They were part of the original construction, and I've got an indoor unit on the wall there, and then you can see outside, outside the window, is the outdoor unit hung off the

				NL Power GRA 2016
	Page 5			Page 7
1	rooms. There's two in the basement, two on	1	(9:15 a.m.)	
2	the main level, one upstairs, and one in the	2	A.	Leave them on and then in the middle of the
3	garage. The out – and there's three outdoor	3		night I would get up, and I would turn off
4	units. So each outdoor unit serves two	4		all the heat pumps and I would turn on the
5	indoor heads. In terms of control features,	5		electric baseboard heaters, and with the
6	these things come with a remote and you –	6		goal of trying to maintain the house at the
7	and they've got lots of different features	7		exact same set point, and I was fairly
8	on them, but I basically just put them in	8		successful in that goal. There are some
9	auto. They're most efficient if they're	9		fluctuations because the thermostats
10	placed on auto and let – you set the	10		probably measure a little bit differently
11	temperature and just let it run. There's	11		than the mini-split heat pumps, but for the
12	different features such as quiet mode and	12		most part the intent was to maintain the
13	you can slow down the fan speeds and things	13		house at 22 degrees Celsius for both minis-
14	like that, but they actually make the units	14		splits and the baseboard heaters. So I did
15	less efficient. I don't – as earlier – as I	15		the text over three nights. The 7th of
16	said earlier, I don't use the night set-	16		April, so it was zero degrees overnight. I
17	back. And the baseboard heaters that I do	17		did again last night, minus three, and I
18	have, they're all controlled from	18		also did it the very night that I had it at
19	programmable thermostats that I used to use	19		minus eight. It was the coldest night, but
20	I guess. So for the testing setup, I	20		I did the test – I guess the first time you
21	purchased a metering device and I think the	21		do something, you learn what worked and what
22	very last slide there kind of shows you the	22		didn't work. So I do have the information
23	package that I bought. It's from a Canadian	23		there for the night of the 6th in the back as
24	company called Efergy. So it's meant for	24		well. So for the performance at zero
25	1 7 63	25		•
	Page 6			Page 8
1	the most part for residential purposes. I	1		degrees Celsius - so there's several lines
2	guess there's probably more of interest in	2		here on this chart. At the bottom are the
3	that in Ontario and probably other	3		time stamps basically. So this device did
4	jurisdictions than there is here, but they	4		record at one-minute intervals. I also
5	do seem to sell a very good product. I was	5		created a 60-minute average of those 1-
6	quite impressed with it when I opened it up.	6		minute intervals. That's the red line. The
7	I think I received it last Wednesday. It	7		one-minute intervals is the blue line and
8	wasn't very expensive, and it – I can even	8		the green line there is the outside
9	monitor my power on my phone. It's that	9		temperature. So the bottom is time, the
10	smart I guess. And it records power at one-	10		left is watts. So that's how much power the
	minute intervals. The testing was done	11		4
11	minute intervals. The testing was done			device is consuming, and on the right is the
	overnight, and the reason for that is	12		temperature, the temperature recorded from
11		12 13		Ç
11 12	overnight, and the reason for that is	ı		temperature, the temperature recorded from
11 12 13	overnight, and the reason for that is because there's no effects. You can kind of	13		temperature, the temperature recorded from Weather – Environment Canada at the airport.
11 12 13 14	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other	13 14		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from
11 12 13 14 15	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no	13 14 15		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of power to heat my house, maintain it at 22
11 12 13 14 15 16	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no televisions on, things like that, and I also	13 14 15 16		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of
11 12 13 14 15 16 17	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no televisions on, things like that, and I also switched off all major appliances. Just so	13 14 15 16 17		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of power to heat my house, maintain it at 22
11 12 13 14 15 16 17 18	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no televisions on, things like that, and I also switched off all major appliances. Just so everyone – so you can see the direct	13 14 15 16 17 18		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of power to heat my house, maintain it at 22 Celsius. There's a few spikes there that
11 12 13 14 15 16 17 18	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no televisions on, things like that, and I also switched off all major appliances. Just so everyone – so you can see the direct comparison between the heat from the mini-	13 14 15 16 17 18 19		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of power to heat my house, maintain it at 22 Celsius. There's a few spikes there that I've got noted that represent when the – a
11 12 13 14 15 16 17 18 19 20	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no televisions on, things like that, and I also switched off all major appliances. Just so everyone – so you can see the direct comparison between the heat from the minisplits versus the heat from the baseboard	13 14 15 16 17 18 19 20		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of power to heat my house, maintain it at 22 Celsius. There's a few spikes there that I've got noted that represent when the – a unit would occasionally go into defrost. Defrost is not really – when the units are lightly loaded, it's not really an issue in
11 12 13 14 15 16 17 18 19 20 21	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no televisions on, things like that, and I also switched off all major appliances. Just so everyone – so you can see the direct comparison between the heat from the minisplits versus the heat from the baseboard heaters. So I - basically around 11:00 p.m.	13 14 15 16 17 18 19 20 21		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of power to heat my house, maintain it at 22 Celsius. There's a few spikes there that I've got noted that represent when the – a unit would occasionally go into defrost. Defrost is not really – when the units are
11 12 13 14 15 16 17 18 19 20 21 22	overnight, and the reason for that is because there's no effects. You can kind of negate the effects of the sun and any other household activities. There's no televisions on, things like that, and I also switched off all major appliances. Just so everyone – so you can see the direct comparison between the heat from the minisplits versus the heat from the baseboard heaters. So I - basically around 11:00 p.m. I would switch off everything, turn on the	13 14 15 16 17 18 19 20 21 22		temperature, the temperature recorded from Weather – Environment Canada at the airport. So on this graph we have – this one is from the night of the 7th. The mini-splits were consuming approximately one kilowatt of power to heat my house, maintain it at 22 Celsius. There's a few spikes there that I've got noted that represent when the – a unit would occasionally go into defrost. Defrost is not really – when the units are lightly loaded, it's not really an issue in

			NL Power GRA 2016
	Page 9		Page 11
1	for this night I turned off the heat pumps	1	colder night, probably blowing around 40 or
2	and turned on the electric baseboard	2	50. It kind a represented a good winter's
3	heaters, and you can see an instant jump in	3	night. This was the first test I did and I
4	demand. Basically the heaters, the electric	4	wish I kind of swapped the – did the mini-
5	heaters, required approximately four	5	splits first versus the electric heaters. I
6	kilowatts of power to maintain the same	6	would have had less up-and-down variations
7	household temperature. And as noted up in	7	and things like that, but at first you can
8	the top right there, basically if night	8	see the electric baseboard heaters were on
9	setback was used, the baseboard heaters, if	9	and they were drawing about five kilowatts.
1		10	I turned off the baseboard heaters at around
10	they all came on at once in the morning like		
11	most people have them set for, the power	11	2:00 a.m. and turned on the heat pumps.
12	would jump to 20 kilowatts, which is	12	Eventually I realized the heat pumps – I had
13	actually off the scale of this chart. I do	13	to turn up the temperature on the heat pumps
14	have a chart later on that shows it. If the	14	a little bit and basically they were warming
15	mini-splits were all turned on maximum at	15	up the house at this point in time because
16	once, they would only consume six kilowatts	16	the house had cooled off actually with the
17	or 6,000 watts. The main difference is that	17	just the baseboard heaters on, and the heat
18	will basically take a little bit longer to	18	pumps were working a bit harder. So you can
19	heat up your house with the mini-split heat	19	see how the curves go up, but they do start
20	pumps versus electrical baseboard heaters,	20	to settle down towards the end and it came
21	but the mini-splits consume much less power.	21	down as low as - they were approaching -
22	This is last night; similar kind of results.	22	they were probably approaching two kilowatts
23	Mini-splits were consuming one kilowatt of	23	towards 6:00 a.m. or 7:00 a.m. in the
24	power. I noted one defrost cycle there	24	morning, but at this point in time, you
25		25	
	Page 10		Page 12
1	occurred at probably 2:30 in the morning.	1	know, 6:30, we're getting up. We've got to
2	At around 3:15 I shut off the heat pumps,	2	turn things back on just for the house to do
$\frac{1}{3}$	turned on the electric baseboard heaters and	3	its daily functions. So I had to end the
1		1	its daily fulletions. So I had to end the
1 4	there was a jumn as well. It went up to	I 4	•
4 5	there was a jump as well. It went up to	4 5	test at that point in time. And the
5	about 3.75 kilowatts, and at – just let me	5	test at that point in time. And the following is a summary of the results. So
5 6	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it	5 6	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The
5 6 7	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this	5 6 7	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three
5 6 7 8	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at	5 6 7 8	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because
5 6 7 8 9	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went	5 6 7 8 9	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first,
5 6 7 8 9 10	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every	5 6 7 8 9 10	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier
5 6 7 8 9 10 11	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate	5 6 7 8 9 10	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the
5 6 7 8 9 10 11 12	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their –	5 6 7 8 9 10 11 12	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the
5 6 7 8 9 10 11 12 13	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back	5 6 7 8 9 10 11 12 13	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first
5 6 7 8 9 10 11 12 13 14	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn	5 6 7 8 9 10 11 12 13 14	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well
5 6 7 8 9 10 11 12 13 14 15	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when	5 6 7 8 9 10 11 12 13 14	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to
5 6 7 8 9 10 11 12 13 14 15 16	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come	5 6 7 8 9 10 11 12 13 14 15 16	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is
5 6 7 8 9 10 11 12 13 14 15 16 17	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you	5 6 7 8 9 10 11 12 13 14 15 16 17	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is 100 percent efficient, the amount of heat
5 6 7 8 9 10 11 12 13 14 15 16 17 18	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you come home. The effect of that is shown	5 6 7 8 9 10 11 12 13 14 15 16 17 18	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is 100 percent efficient, the amount of heat coming out of the baseboard heaters is
5 6 7 8 9 10 11 12 13 14 15 16 17	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you come home. The effect of that is shown here. So the demand basically of turning on	5 6 7 8 9 10 11 12 13 14 15 16 17	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is 100 percent efficient, the amount of heat coming out of the baseboard heaters is required to maintain the house at 22
5 6 7 8 9 10 11 12 13 14 15 16 17 18	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you come home. The effect of that is shown	5 6 7 8 9 10 11 12 13 14 15 16 17 18	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is 100 percent efficient, the amount of heat coming out of the baseboard heaters is
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you come home. The effect of that is shown here. So the demand basically of turning on	5 6 7 8 9 10 11 12 13 14 15 16 17 18	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is 100 percent efficient, the amount of heat coming out of the baseboard heaters is required to maintain the house at 22
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you come home. The effect of that is shown here. So the demand basically of turning on all heaters at once causes them all to come	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is 100 percent efficient, the amount of heat coming out of the baseboard heaters is required to maintain the house at 22 Celsius, that's four kilowatts. The
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you come home. The effect of that is shown here. So the demand basically of turning on all heaters at once causes them all to come on, and you start drawing the maximum	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. So the baseboard heaters were, say for the first night at zero degrees, drawing four. Well actually so the amount of heat required to heat the house because as electric heater is 100 percent efficient, the amount of heat coming out of the baseboard heaters is required to maintain the house at 22 Celsius, that's four kilowatts. The baseboard heater puts out four kilowatts to
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	about 3.75 kilowatts, and at – just let me see what else I have. That's probably it for that slide. This was also done this morning. So this simulated - basically at the end of the test this morning, I went around the house and turned up every thermostat. So it was basically to simulate a morning warm-up. If everyone has their – the conventional wisdom is you turn back your thermostats at night. You can turn back your thermostats in the daytime when you're at work, and they automatically come on or you turn them on manually when you come home. The effect of that is shown here. So the demand basically of turning on all heaters at once causes them all to come on, and you start drawing the maximum capacity of those heaters which in this case	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	test at that point in time. And the following is a summary of the results. So the first table there is to summarize. The red line, so we've got our three temperatures. I added wind speed, because basically the last – you know on the first, on the night of zero degrees it was windier than last night at minus three and the results were fairly similar. 1	to do that, and that gives you a coefficient	1	brand. Some data sheets, some performance
2	of performance which is a term used for	2	curves. And this is the metering unit that
3	these heat pumps of 4.0. Last night's test,	3	I purchased. It's the company website.
4	fairly similar results. It worked out to a	4	Very easy to buy and install. It comes with
5	coefficient of performance of 3.5. The test	5	a local monitor you can lay on your desk.
6	at minus eight which again I'm not – I don't	6	It comes with a box so you can connect it up
7	think things were fully settled out in terms	7	to the internet basically. I could log on
8	of the loads on the heat pumps. I think	8	here and demonstrate how I can – I can't log
9	they would have come down more, but based on	9	on here with the computer or I can log on
10	these results I got a coefficient of	10	with my phone and basically meter my house
11	performance of 2.5. And the peak demand for	11	right now and show trends over the last
12	the various tests are shown as well. So	12	number hours, number of days. That was it.
13	there's – the mini-split heat pump	13	CHAIRMAN:
14	demonstrated a savings in each case, roughly	14	Q. Anybody have any questions?
15	about 50 or 60 percent. So conclusions, I	15	MR. DAVID ADAMS, CROSS-EXAMINATION BY THOMAS JOHNSON,
16	guess a mini-split heat pump can effectively	16	Q.C.
17	heat an entire house if it's – and it should	17	JOHNSON, Q.C.:
18	be I guess suitably sized for low	18	Q. Yes, I have a few questions for Mr. Adams.
19	temperature extremes. And some of the – at	19	Mr. Adams, the cost to install one of these
20	least with the units I have, the performance	20	units - you've done it recently.
21	I'm seeing is you'll get two to one. Based	21	MR. ADAMS:
22	on the data sheets anyways you'll get two to	22	A. Yes.
23	one at say minus 15 Celsius, so two times	23	JOHNSON, Q.C.:
24	more efficient than electric baseboard	24	Q. What sort of cost are you looking at?
25		25	, ,
	Page 14		Page 16
1	heaters. Four to one at zero Celsius which	1	MR. ADAMS:
2	is a more common average temperature here in	2	A. The cost – I'll give you two costs. When I
3	Newfoundland or at least St. John's which	3	built my house in - I built it R2000. That
4	over the year adds up to significant energy	4	•
5	savings. At zero degrees Celsius we're	5	house in 2005. That was about 2.5 percent
6	seeing are seeing 75 percent lower energy	6	add-on. My mini-splits heat pumps which is
7	use, 65 – 60 percent lower peak demand, and	7	added to the house over the last couple of
8	I guess the mini-split heat pump at least	8	years that was about a 3½ percent add-on the
9	certainly for my house, the connected	9	value of the house. It was around \$15,000
10	maximum demand of mini-split heat pumps is –	10	·
11	always has to be lower than the equivalent	11	about a 3½ percent of the cost of the house
12	for baseboard heaters. I have, you know,	12	to add those units.
13	roughly 20 kilowatts of baseboard heaters	13	JOHNSON, Q.C.:
14	installed; and the heat pumps, if you turn	14	Q. So the units themselves if – lots of people
15	them all on at once, all at maximum, will	15	put them in like one by each.
16	only 6 kilowatts. Defrost cycles appear to	16	MR. ADAMS:
17	have little or no effect on the efficiency	17	A. Yeah.
18	of the units or household comfort, and night	18	JOHNSON, Q.C.:
19	setback shouldn't be used with these units.	19	Q. That type of thing.
20	It doesn't add to the efficiency or the	$\begin{vmatrix} 1 \\ 20 \end{vmatrix}$	MR. ADAMS:
20 21	comfort of your house. It actually makes	$\frac{20}{21}$	A. Yeah.
22	them less efficient. And the rest is just	$\begin{vmatrix} 21\\22\end{vmatrix}$	JOHNSON, Q.C.:
1 44	ment tess efficient. And the test is fust	I 44	JOHNSON, Q.C
23	•	122	O But what gart of good or do you know about
23	backup material, so just information on the	23	Q. But what sort of cost, or do you know about

		Page 17			Page 19
1	MR. ADAMS	:	1	MR. ADAMS	:
2	A.	I mean I've got – two personal examples I'm	2	A.	And they're more efficient, but I can't say
3		aware of, my in-laws have a smaller house in	3		for sure how much.
4		Petty Harbour. They had one unit installed	4	JOHNSON, Q	
5		down there, probably what everyone is more	5	Q.	Right, is – are you aware of much of a price
6		familiar with, one unit, one indoor head,	6		difference between the minus 15 rated and
7		heating a small house and their install cost	7		the minus 20 or –
8		was around \$2,000.	8	MR. ADAMS	
9	JOHNSON, Q	•	9	A.	I'd just be guessing. Maybe it's 10 or 20
10	Q.	Right.	10	11.	percent premium. I can't quite say for
11	MR. ADAMS	•	11		sure.
12	A.	Two thousand or \$2500. Mine, I've got	12	JOHNSON, Q	
13	A.	bigger units, so the cost was in the four-	13		All right, the – in the coldest nights that
14		to-five-thousand-dollar range per unit.	14	Q.	
1	IOHNGON C	5 1	ı		you've noticed them, I guess you go by
15	JOHNSON, Q	·	15		normally you'd feel ambient air coming out
16	Q.	Right. In terms – you've mentioned that	16		of them, would that be normal, in their
17		yours, you reckon yours was sort of like a	17		normal operation? It wouldn't feel warm to
18		middle-of-the-road type of unit. So I guess	18	MD ADAMG	the touch, is that right?
19		are you aware of more efficient units out	19	MR. ADAMS	
20	MD ADAMO	there than yours?	20	A.	No, it's – on a cold night it's always warm
21	MR. ADAMS		21	IOIDIGON O	to the touch, absolutely.
22	A.	Yes, there are definitely more efficient	22	JOHNSON, Q	
23		ones out there than mine. Fujitsu,	23	Q.	Warm to the touch.
24		Mitsubishi I think, Daikin are probably some	24	MR. ADAMS	:
25			25		
		Page 18			Page 20
1		of the higher end units that are out there.	1	A.	Yeah.
2		Mine are – I think LG is common brand that's	1 1		
3		Time are Timik Eo is common orang that s	2	JOHNSON, (~

1 2	unit off, on and off with a timer or you can turn it off at night by using these setback	1 2	y	Yes. So when you were doing your testing, you turned off all other major appliances,
1 2 3	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature	1 2 3	MR. ADAMS:	Yes. So when you were doing your testing, you turned off all other major appliances,
1 2 3 4	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend	1 2 3 4	MR. ADAMS:	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on
1 2 3 4 5	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.:	1 2 3 4 5	MR. ADAMS:	Yes. So when you were doing your testing, you turned off all other major appliances, did you?
1 2 3 4 5 6	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it.	1 2 3 4 5 6	MR. ADAMS: A.	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that
1 2 3 4 5 6 7	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the	1 2 3 4 5 6 7	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the
1 2 3 4 5 6 7 8	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all?	1 2 3 4 5 6 7 8	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to
1 2 3 4 5 6 7 8 9	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS:	1 2 3 4 5 6 7 8 9	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be
1 2 3 4 5 6 7 8 9	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.:	1 2 3 4 5 6 7 8 9	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out; deepfreeze would be
1 2 3 4 5 6 7 8 9 10	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.:	1 2 3 4 5 6 7 8 9 10	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out; deepfreeze would be cutting in and out, those types of things.
1 2 3 4 5 6 7 8 9 10 11 12	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS:	1 2 3 4 5 6 7 8 9 10 11 12	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out, those types of things. So all those things were turned off for this
1 2 3 4 5 6 7 8 9 10 11 12 13 14	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS: A. Correct, yeah.	1 2 3 4 5 6 7 8 9 10 11 12 13 14	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out; deepfreeze would be cutting in and out, those types of things. So all those things were turned off for this test, for roughly a 12-hour period. So all
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS: A. Correct, yeah. JOHNSON, Q.C.:	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	MR. ADAMS: A. t	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out; deepfreeze would be cutting in and out, those types of things. So all those things were turned off for this test, for roughly a 12-hour period. So all you see in this graph is heat.
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS: A. Correct, yeah. JOHNSON, Q.C.: Q. Okay.	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	MR. ADAMS: A. t t t J JOHNSON, Q.	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out; deepfreeze would be cutting in and out, those types of things. So all those things were turned off for this test, for roughly a 12-hour period. So all you see in this graph is heat. C.:
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS: A. Correct, yeah. JOHNSON, Q.C.: Q. Okay. MR. ADAMS:	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	MR. ADAMS: A. t t t JOHNSON, Q. Q.	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out; deepfreeze would be cutting in and out, those types of things. So all those things were turned off for this test, for roughly a 12-hour period. So all you see in this graph is heat.
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS: A. Correct, yeah. JOHNSON, Q.C.: Q. Okay. MR. ADAMS: A. Yeah.	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MR. ADAMS: A. t t t t J JOHNSON, Q. Q. MR. ADAMS:	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out, those types of things. So all those things were turned off for this test, for roughly a 12-hour period. So all you see in this graph is heat. C.: Okay.
1 2 3 4 4 5 6 7 8 8 9 10 11 12 13 14 15 16 17 18 19	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS: A. Correct, yeah. JOHNSON, Q.C.: Q. Okay. MR. ADAMS: A. Yeah. (9:30 a.m.)	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	MR. ADAMS: A. to	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. Fridges would be cutting in and out; deepfreeze would be cutting in and out, those types of things. So all those things were turned off for this test, for roughly a 12-hour period. So all you see in this graph is heat. C.: Okay. All the lights are off. I mean people are
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	unit off, on and off with a timer or you can turn it off at night by using these setback features if your unit has that feature available. It doesn't necessarily recommend that you do it. JOHNSON, Q.C.: Q. Right. So you don't bother to use to the setback at all? MR. ADAMS: A. No. JOHNSON, Q.C.: Q. You find it more efficient not to? MR. ADAMS: A. Correct, yeah. JOHNSON, Q.C.: Q. Okay. MR. ADAMS: A. Yeah. (9:30 a.m.) JOHNSON, Q.C.:	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	MR. ADAMS: A. t t t JOHNSON, Q. Q. MR. ADAMS: A.	Yes. So when you were doing your testing, you turned off all other major appliances, did you? Yes. So, just because it would show up on these graphs. You know a hot water tank, that's a three-kilowatt load. So if that was on, you'd see spikes throughout the night for the hot water tank, just trying to maintain its temperature. 	Page 25			Page 27
1	MR. ADAMS:	1		I can use heat pumps?
2	A. Yes.	2	MR. ADAMS:	
3	JOHNSON, Q.C.:	3	A.	Yeah.
4	Q. Those are the questions I have for you.	4	CHAIRMAN:	
5	CHAIRMAN:	5	Q.	Or I can buy a conventional furnace, fuel
6	A. Anybody else have any?	6		furnace, you know?
7	UNKNOWN FEMALE SPEAKER: (21:13)	7	MR. ADAMS:	
8	Q. Thank you, Mr. Adams.	8		Yeah.
9	MR. DAVID ADAMS, CROSS-EXAMINATION BY CHAIRMAN	9	CHAIRMAN:	
10	CHAIRMAN:	10		What's the difference in cost?
11	Q. No, I've got a couple of questions. So this	11	MR. ADAMS:	
12	was a new house? When did you build your	12	A.	I'm not – I don't know if I can really speak
13	house?	13		to that that well to be honest. I mean my
14	MR. ADAMS:	14		baseboard heaters were embedded in the cost
15	A. 2010. Sorry, it's ten years old, so two	15		of my house when it was built.
16	thousand and – it'll be 11 years this year.	16	CHAIRMAN:	
17	CHAIRMAN:	17	Q.	No, I understand.
18	Q. And what did you have in it?	18	MR. ADAMS:	
19	MR. ADAMS:	19	A.	Yeah.
20	A. So 2005.	20	CHAIRMAN:	
21	CHAIRMAN:	21		I mean you retrofitted.
22	Q. What did you have in it originally? What	22	MR. ADAMS:	
23	did you start out with?	23	A.	I retrofitted the – I can tell you what the
24	MR. ADAMS:	24		heat pumps cost. It was in the range of
25		25

2	which included the then current forecast of	2	Newfoundland Power's last GRA, is that
3	the transition between Holyrood being on the	3	right?
4	marginal cost to using market-based marginal	4	MR. HENDERSON:
5	costs going forward. Hydro, a month or so	5	Q. That's correct.
6	ago, provided another marginal cost estimate	6	JOHNSON, Q.C.:
7	post-Muskrat. The numbers were fairly	7	Q. And at that particular point in time, the
8	similar to the previous one, so it didn't	8	mini-split heat pump study had not been
9	give us pause to have to go out and		done, but it was going to be done, is that
10	completely review our programs immediately.	10	right?
11	However, we still need to go through that	11	MR. HENDERSON:
		1	
12	process to ensure that everything looks	12	A. That's right.
13	okay. Part of the information flow between	13	JOHNSON, Q.C.:
14	us and Hydro right now includes the	14	Q. Okay, and then if we go over to page 12 at
15	potential projection of those marginal costs	15	the top, it's indicated that, "Based on the
16	going into the future, and that affects	16	final phase of the study which will be
17	obviously how things will look over the next	17	completed in 2015, Newfoundland Power will
18	15/20 years for these programs. So we'll be	18	make determinations regarding the potential
19	moving forward with doing a level of re-	19	for the mini-splits to impact the electrical
20	evaluation once we fully understand all the	20	system".
21	matters related to marginal costs during the	21	MR. HENDERSON:
22	forecast.	22	A. That's right.
23	JOHNSON, Q.C.:	23	JOHNSON, Q.C.:
24	Q. So in terms of looking at the mini-split	24	Q. Okay. Now in terms of going back to the
25	study that Newfoundland Power has done, and	25	five year plan for a moment that we just
	Page 54		Page 56
1	perhaps, I guess, first of all maybe we	1	looked at, if we could go to page 15 of
2	could just go to the 2013 Conservation	2	that, the first full paragraph on that page
3	Demand Management Report that was filed with	$\frac{2}{3}$	where you're indicating, "Newfoundland Power
4	the Board, and I sent that over as Cross Aid	4	completed research on ductless mini-split
۱ ۔	2 a little while back. It's Cross Aid 2 on	_ ا	heat pumps from 2013 to 2015. The
5	the March 29th letter.	$\begin{vmatrix} 5 \\ 6 \end{vmatrix}$	objectives of this research were to assess
6	MS. GLYNN:	7	· ·
/		1	the current MSHP market in Newfoundland, use
8	Q. We'll enter that as Information #35.	8	of the MSHP as a supplementary heat source,
9	JOHNSON, Q.C.:	9	and the potential of MSHPs on the
10	Q. Thank you. Samantha, it's Item 2 on my	10	electricity system. The results indicate
11	letter of March 29th.	11	that MSHP are more efficient and do save
12	MS. GLYNN:	12	energy compared to electric baseboard heat.
13	Q. As a housekeeping, while we're waiting for	13	This analysis also shows there's not likely
14	that to come up, we didn't enter the	14	to be peak demand reduction on the
15	presentation just given by Mr. Adams, so	15	electricity system from installation of
16	we'll enter that as Exhibit DA 3, and I	16	MSHPs", and I take it, Mr. Henderson, that
17	think we have the report there now, Mr.	17	this finding in particular that there's no
18	Johnson.	18	likely to be peak demand reduction, that's
	Johnson.		1 1 N C 11 1D 2 1 4 1 1 1
19	JOHNSON, Q.C.:	19	based on Newfoundland Power's internal mini-
		19 20	split heat report that you referenced in
19	JOHNSON, Q.C.:	1	
19 20	JOHNSON, Q.C.: Q. Thank you. So at the time of the filing of	20	split heat report that you referenced in
19 20 21	JOHNSON, Q.C.: Q. Thank you. So at the time of the filing of this report on March 31st, 2014, if we could	20 21	split heat report that you referenced in your discussion with Mr. Kelly, is that
19 20 21 22	JOHNSON, Q.C.: Q. Thank you. So at the time of the filing of this report on March 31st, 2014, if we could go to page 11 of that document, I take it this is where the company was providing a	20 21 22	split heat report that you referenced in your discussion with Mr. Kelly, is that right?
19 20 21 22 23	JOHNSON, Q.C.: Q. Thank you. So at the time of the filing of this report on March 31st, 2014, if we could go to page 11 of that document, I take it	20 21 22 23 24	split heat report that you referenced in your discussion with Mr. Kelly, is that right? MR. HENDERSON:

	11 12, 2016			NL Power GRA 2016
		Page 57		Page 59
1	Q.	So in terms of that report, if we could just	1	with the mini-split technologies when I
2		ask a couple of questions about that, who	2	started looking under the hood for this
3		authored the report, who was responsible for	3	particular presentation and appearing here,
4		putting that report together?	4	I talked to the engineers about some of the
5	MR. HENDE	1 0 1	5	issues that are going on with capacity, and
6	A.	Our Take Charge staff.	6	one of them is that the standard testing for
7	JOHNSON, O		7	these products are at 8 degrees and –8
8	Q.	Was the report done by an engineer?	8	degrees Celsius. So the performance below –
9	MR. HENDE		9	8 degrees Celsius is not part of the
10	A.	There were a couple of engineers involved in	10	standard testing regime for these things.
11	71.	the project, yes.	11	As David Adams mentioned, and we've seen it
12	JOHNSON, O	1 5	12	also, is some manufacturers are producing
13	Q.	I notice the report is not signed off on by	13	numbers below that down to –15. We're not
14	Q.	an engineer. Normally, I see reports from	14	sure the extent to which they are
15		you guys – I shouldn't say you guys,	15	extrapolations which are allowed under the
16		Newfoundland Power, Hydro, in matters such	16	CSA standard, or whether they are actual
17		as this that they would actually be signed	17	testing results, and it's actually part of
18		•	18	•
19		off by a professional engineer. That would	19	the conversations going on with the Atlantic
1	MR. HENDE	be normal practice?	20	utility group is reviewing the standards and
20				possibly seeing if we can get out there with a standard that will look at much colder
21	A.	That is certainly normal practice for a	21	
22		submission to the capital budget program.	22	temperatures, -20, you know, and those types
23		It's not necessarily always done for every	23	of things because peaks in this part of the
24		report, but I regard that as being probably	24	world often happen at those types of
25		an oversight somewhat on our behalf just	25	temperatures; in St. John's, a little less
1		Page 58		Daga 40

1		because, you know, it came out in this form.	1	so; in western Newfoundland, much more so.
2	JOHNSON, Q	because, you know, it came out in this form. O.C.:	2	so; in western Newfoundland, much more so. So we've got to understand that dynamic when
1	JOHNSON, Q	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get		so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other
2	Q.	because, you know, it came out in this form. 2.C.: Okay. So this report, when did it get finalized?	2	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my
2 3	-	because, you know, it came out in this form. O.C.: Okay. So this report, when did it get finalized? RSON:	2 3	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things
2 3 4	Q.	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in	2 3 4	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not
2 3 4 5	Q. MR. HENDE	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report	2 3 4 5	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated,
2 3 4 5 6	Q. MR. HENDE	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything,	2 3 4 5	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not
2 3 4 5 6 7 8 9	Q. MR. HENDE	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything, got tweaked for some presentation issues	2 3 4 5 6 7	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned
2 3 4 5 6 7 8	Q. MR. HENDE A.	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything, got tweaked for some presentation issues prior to the submission here.	2 3 4 5 6 7 8	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned down quite low in my garage. So that's new
2 3 4 5 6 7 8 9	Q. MR. HENDE	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything, got tweaked for some presentation issues prior to the submission here.	2 3 4 5 6 7 8 9	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned
2 3 4 5 6 7 8 9 10	Q. MR. HENDE A.	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything, got tweaked for some presentation issues prior to the submission here.	2 3 4 5 6 7 8 9	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned down quite low in my garage. So that's new
2 3 4 5 6 7 8 9 10 11	Q. MR. HENDE A. JOHNSON, Q	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything, got tweaked for some presentation issues prior to the submission here. Q.C.: Prior to it being filed here?	2 3 4 5 6 7 8 9 10	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned down quite low in my garage. So that's new heat. Similarly, with oil customers in most jurisdictions in North American, these things are being promoted to their existing
2 3 4 5 6 7 8 9 10 11 12	Q. MR. HENDE A. JOHNSON, Q. Q. MR. HENDE A.	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything, got tweaked for some presentation issues prior to the submission here. Q.C.: Prior to it being filed here? RSON: Yeah.	2 3 4 5 6 7 8 9 10 11 12	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned down quite low in my garage. So that's new heat. Similarly, with oil customers in most jurisdictions in North American, these
2 3 4 5 6 7 8 9 10 11 12 13	Q. MR. HENDE A. JOHNSON, Q. Q. MR. HENDE	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? (C.: Prior to it being filed here? RSON: Yeah. (C.; Okay, and so does Newfoundland Power regard this report as sort of the authoritative piece of work that it has to say that these mini-split heat pumps are not going to be valuable from a system peak point of view? RSON: No. You know, these devices are always	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned down quite low in my garage. So that's new heat. Similarly, with oil customers in most jurisdictions in North American, these things are being promoted to their existing heating base which is more often than not oil, possibly natural gas. I'd say New Brunswick might be more like us, but in Nova Scotia, you know, they're mostly coming off oil and going into these things. So it's actually – from a utility perspective, it might even have a load building effect. For those reasons, you know, taking mini-splits as a whole going into our marketplace, we
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. MR. HENDE A. JOHNSON, Q. MR. HENDE A. JOHNSON, Q. Q.	because, you know, it came out in this form. Q.C.: Okay. So this report, when did it get finalized? RSON: Largely, it got finalized in October/November, and I know the report itself, I would call it more than anything, got tweaked for some presentation issues prior to the submission here. Q.C.: Prior to it being filed here? RSON: Yeah. Q.C.; Okay, and so does Newfoundland Power regard this report as sort of the authoritative piece of work that it has to say that these mini-split heat pumps are not going to be valuable from a system peak point of view? RSON: No. You know, these devices are always changing and improving with time. The study	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	so; in western Newfoundland, much more so. So we've got to understand that dynamic when we look at the overall impact. The other thing weighing on us, as I mentioned in my presentation, is the fact that these things are being installed in places that are not ordinarily or often not ordinarily heated, like garages. I think Mr. Adams, he has heaters in his garage. I got mine turned down quite low in my garage. So that's new heat. Similarly, with oil customers in most jurisdictions in North American, these things are being promoted to their existing heating base which is more often than not oil, possibly natural gas. I'd say New Brunswick might be more like us, but in Nova Scotia, you know, they're mostly coming off oil and going into these things. So it's actually – from a utility perspective, it might even have a load building effect. For those reasons, you know, taking mini-splits as a whole going into our marketplace, we don't expect to attribute any demand savings

		Page 65		Page 67
1	MR. HENDE	RSON:	1	some form in that house. So the backup heat
2	A.	I'll apologize first, my answer might be a	2	will kick in, or people will use it once the
3		little bit technical. Where they say "no	3	house obviously gets cold, and they're part
4		change in the load shape for the end use"	4	of the concerns associated with it. What
5		means that, let's say – I'm going to try to	5	they're talking about here, there's no
6		keep the numbers simple. The electric heat,	6	question in St. John's, as I mentioned
7		the peak load factor let's assume it's 50	7	earlier, the coldest temperatures in St.
8		percent, so it means that your average load	8	John's tends to be less than it is on the
9		is half of what the peak load is, okay.	9	west coast of Newfoundland. We recognize
10		When you get to your annual use, that's the	10	the majority of the loads in St. John's
11		load shape effectively. For mini-splits, we	11	rather than others, so, yes, heat pumps can
12		know that, let's say, the electric heat	12	be designed to go through. I agree with the
13		portion is going to drop by a third, a COP	13	assumption that – I shouldn't say the
14		or efficiency of three times, okay. So the	14	assumption, but the assessment that they
15		energy drops to one-third of the value,	15	have that assuming for switching from
16		right, but we know at very cold temperatures	16	baseboard heating to electric in St. John's,
17		that the impact on peak is much less. Let's	17	it's certainly potential that you could
18		say, if they're operating through peak and	18	design your system, if you designed it
19		the house is designed such that no areas of	19	specifically to meet the coldest
20		the house do you have to turn on baseboard	20	temperatures, yes, you could probably get a
21		heating, assuming that, then at -15 , I think	21	heat pump system to go in there and do it.
22		the COP numbers might be around two times,	22	
23		your peak only drops by a half. So your	23	your house to heat all the areas of your
24		peak is dropping by a half, and your base is	24	house, and I'm not sure if it's the most
25		dropping by a much larger amount, so load	25	economical way to do it because you've got
		Page 66		Page 68
1		shape changes. When they say that the model	1	to get the right mix of savings and number
2		is fairly simple because it's using the	2	of heat pumps, but, you know, it makes sense
3		average load shape for the average use going	3	to me that assuming there's none is probably
4		forward, means that if you didn't do	4	a conservative assumption. The extent to
5		anything, that's the effect that the program	5	which that's the case, I'm really not sure.
6		that they're using would have. You would	6	JOHNSON, Q.C.:
7		basically overestimate the peak savings,	7	Q. That statement that they make that, "Many
8		given if these things even operated right	8	heat pumps will continue to work in heat
9		through peak. So they have to go in there	9	1 1
10		and manually adjust that. The experience	10	,
11		with many types of heat pumps is that they	11	Newfoundland Power agrees with, that
12		have resistant heat backup built into it, so	12	
13		when they reach, you know, cold temperatures	13	
14		and they're no longer able to heat the full	14	1 1 7 1 &
15		house, the baseboard heating kicks in. I	15	
16		had a look at the data from the sample that	16	• •
17		we had, and it was very clear that a certain	17	
18		portion of the customers where clearly the	18	۵,
19		backup heating was kicking in because you	19	Č
20		could see that the load is going along and	20	1
21		all of a sudden for a few intervals it went	21	obviously he didn't turn it on.
22		up and then it came back down again. So	22	
23		it's very clear that the people were getting	23	71 1 1
24		uncomfortable in their homes and they were	24	, , , , , , , , , , , , , , , , , , , ,
25		turning on presumably their electric heat in	25	mode and not revert to electric resistance,

Apri	11 12, 2016			NL Power GRA 2016
		Page 69		Page 71
1		has Newfoundland Power looked at which types	1	we won't save enough money to offset those –
2		would be more likely to fit into that	2	the cost you're sticking in, we're not going
3		category?	3	to experience enough savings to cover off
4	MR. HENDE	ERSON:	4	those costs, so on average everybody is kind
5	A.	We know the ones that are more high	5	of potentially worse off once Muskrat Falls
6		efficient, you know, like he was mentioning	6	comes in, because once it's in there, we
7		the Daicon units and some other units that	7	have lots of energy capacity coming into the
8		are quite good in cold temperatures. What	8	system and it's really only valued at what
9		we don't know is how they operate in extreme	9	we can sell it for, for the most part.
10		load conditions, right. We do know in the	10	(10:15 a.m.)
11		sample we had, some people were reverting	11	JOHNSON, Q.C.:
12		back to baseboard heating. So we do know	12	Q. In terms of the Nova Scotia experience, and
13		that the extent to which there's any, if any	13	then we'll turn to New Brunswick, if we
14		savings overall, it's going to be very	14	could just go to my letter of April 11th,
15		limited. From a system planning	15	which is yesterday, the efficiency Nova
16		perspective, we know these, like I mentioned	16	Scotia material, Mr. Henderson, if you could
17		before, are going to go into all kinds of	17	just take a look at that.
18		places because they're a very effective	18	MS. GLYNN:
19		heating source. As a result, you know, it's	19	Q. And that would be Information #37.
20		not something I would want to count on that	20	JOHNSON, Q.C.:
21		that's going to reduce our demand. We took	21	Q. Thank you. If you go to the first page
22		a hard look. You know, when we saw the	22	there, they're indicating, "Please note
23		results for these, I was really surprised it	23	rebates for heat pumps are not retroactive.
24		didn't pass because there's discounts being	24	Heat pumps purchased and/or installed prior
25		operated in other jurisdictions, so what	25	to October 1st are not eligible for rebates
		Page 70		Page 72
1		makes us different, you know, that sort of	1	or financing", and then if you flip the
2		stuff. You know, our assessment of running	2	page, they go over to what their rebate
3		a program had a total resource cost test of	3	amounts are. They offer fairly small rebate
4		around .5, which is really measurable.	4	for the ductless mini-split heat pump of
5		Really what part of that is that on top of	5	\$300.00, certainly small relative to some of
6		this 9 cents per kilowatt, 8 to 10 cents, or	6	the other incentives they use, all the way
7		whatever for CC, we have to load on the cost	7	up to \$1,900.00 for a geothermal heat pump.
8		of actually doing the program. So the cost	8	If you look at overall program eligibility,
9		actually becomes a little bit higher. It	9	the home's heating system must be set up to
10		came out at .5. We went in there and we	10	provide all or a majority of the home's
11		tested it and said, okay, if we stick in -	11	heating by electricity. So they would
12		assume they have a load factor equivalent to	12	target that to electricity heated homes, and
13		baseboard heating, which we know they don't,	13	is there any present – I know you're working
14		which is a real conservative estimate,	14	with Nova Scotia Power, at least interacting
15		there's no way could we get it to pass. So	15	with them. Have they indicated to this
16		as a result, testing these types of things	16	point whether they view these items as
17		suggested that we can't make it economic for	17	having an impact on their winter peak?
18		Newfoundland Power to invest in because of	18	MR. HENDERSON;
19		the minimum investment that we have, but we	19	A. There's uncertainty. That's the reason why
20		also recognize that given the retail	20	they're doing the testing. Well, this is
21		pricing, yeah, they're probably economical.	21	Efficiency Nova Scotia. I stand to be
22		If you do a real well designed unit, it's	22	corrected. It may be Nova Scotia Power
23		probably economical for most everybody in	23	that's doing the study. I'm not sure if
24		this room to stick one in if they design it	24	it's Efficiency Nova Scotia. There's two
25		well for their retail rate. The problem is	25	entities doing programming there. The

	Page 77		Page 79
1	know, the published data is that they should	1	A. Oh, sorry. Do I have a list? I don't think
2	be able to give you some savings down to	2	I have a list, but I know New Brunswick
3	minus 20 degrees Celsius, right? The	3	Power, Maritime Electric, Nova Scotia Power
4	justification for heat pumps or being	4	Inc., Efficiency Nova Scotia, the Department
5	provided a discount in all these areas or	5	of Natural Resources here, and the
6	all these utilities, we understand in those	6	appropriate provincial government
7	jurisdictions they're passing total resource	7	departments from each of the provincial
8	cost tests, so obviously their marginal cost	8	governments from all the regions, and the
9	is calculated for their region is going to	9	group which just met once so far, had
10	be—it's higher than what we're expecting it	10	presentations done at the time from the
11	to be. So that's a big part of the	11	Federal government department responsible
12	difference with regard to offering	12	for, you know, the equipment standards and
13	discounts. With regard to peak, I'm not	13	that type of stuff.
14	sure if peak is the reason why they're being	14	JOHNSON, Q.C.:
15	able to justify it, but there's no question	15	Q. And so the heat pump that they are looking
16	that at cold temperatures, some heat pumps	16	at incenting, that's a similar type to the
17	do have the potential capability of doing	17	one that Newfoundland Power is prepared to
18	it; however, the certainty and how much we	18	finance, is that right?
19	can count on is something that's part of the	19	MR. HENDERSON:
20	issue with regard to, you know, standards	20	A. Yes, and we would be promoting it through
21	testing and that type of stuff, to ensure	21	our information and items and discussions
22	that below certain temperatures how are they	22	with our suppliers and all that sort of
23	going to perform, and you know, that is	23	stuff. Our program, we'll be trying to get
24	somewhat still an outstanding issue.	24	them to all promote that unit because that's
25	JOHNSON, Q.C.:	25	the best unit to maximize the saving.
23	Page 78	123	Page 80
,	Q. New Brunswick probably would be colder, I've	١,	JOHNSON, Q.C.:
2	lived there and I can tell you it was much	$\frac{1}{2}$	Q. So the financing that Newfoundland Power
3	colder in the wintertime than what you	$\frac{2}{3}$	provides, that's going to be applicable to
4	typically experience, certainly here on the	4	people who presently have oil heat as well?
1	Avalon and would certainly rival Central	4	MR. HENDERSON:
5	from my experience. So you don't know	3	
6	· · ·	$\begin{vmatrix} 6 \\ 7 \end{vmatrix}$	11 7 7 7 7

		Page 81		Page 83
1	JOHNSON, C).C.:	1	result, I think the assumption where we
2	Q.	That's right. And I guess Mr. Henderson, it	2	stated this can be expected to contribute to
3		might be helpful if you could sort of	3	a higher overall peak for those putting in
4		outline the methodology that was used here	4	mini-splits into baseboard heating, I think
5		for making the conclusion that this unit	5	is overstating what might happen. But it's
6		would not have offered demand savings?	6	clear in the data that we have, which is on
7	(10:30 a.m.)	<i>8</i>	7	people who have them existing, is that some
8	MR. HENDE	RSON.	8	customers were certainly switching over to
9	A.	The methodology was very much based on,	9	electric backup during periods during the
10	11.	first of all trying to get a sample of	10	winter, so we were seeing some of these
11		customers and that was a little bit of a	11	spikey kind of peaks and, you know, the
12		challenge in and of itself. We had around	12	overall comparison for this group, as you
13		128 customers that responded to our customer	13	can see, suggests that the average for those
14		survey as being those who had units	14	homes are very comparable.
15		installed themselves and we got some pretty	15	JOHNSON, Q.C.:
16		good data on how they operate those units	16	Q. Do you want to refer us to where you are in
17		and that type of stuff, and they're the ones	17	that regard, Mr. Henderson, we can bring it
18		we've benchmarked in order to determine this	18	up on the screen, if you wish?
19		5,000 kilowatt hours, which is largely	19	MR. HENDERSON:
$\frac{19}{20}$		consistent with industry norms on what to	20	A. Yeah, we can turn to let's say load profile
21		expect.	21	that's on page 32 and the colours don't show
$\begin{vmatrix} 21\\22\end{vmatrix}$	With regard	to the peak one, we went out and we were	22	up on this copy but the line that is
$\begin{vmatrix} 22 \\ 23 \end{vmatrix}$	with regard	very hopeful that we could possibly do some	23	generally lower is the mini-split heat pump
$\begin{vmatrix} 23 \\ 24 \end{vmatrix}$		type of experimenting which we would have	24	line and the one that's generally higher,
25		the customers use their heat pump some	25	that's the best way to say it, is the
23		• •	23	·
١,		Page 82	,	Page 84
		evenings and not use it for other evenings,	1	electric sample and some of the spiking is
$\frac{1}{2}$		similar to what David Adams did, but just on	2	especially during that morning period. I
3		a more gross home basis, but we found that	3	had a look at to what's kind of causing some
4		people weren't willing to participate if	4	of the spikiness in the mini-split heat
\int_{0}^{2}		they had to do that type of testing, so we	5	pump. Part of it is the fact that it's a
6		were left with having monitors, monitoring	6	very small sample, so as a result you're
7		the poled home, interval meters gather data	7	going to get a much more noisier load shape
8		every fifteen minutes and we had these 18	8	and part of it was that, you know, I noted a
9		homes and we use them to get the best sense	9	couple of times during the day some of the
10		of how their load shape would be during the	10	customers were certainly switching to the
11		winter and get what information we glean out	11	electric heat backup, so it was causing some
12		of it. What we also had in place during the	12	more of the spikey stuff. I think probably
13		same winter season was interval data being	13	the one that was at 7:00 may have been, you
14		collected on a program, our direct hot water	14	know, a couple of customers went to their
15		control program, so as a result we had a	15	electric baseboard heating backup and
16		benchmark group and we had this mini-split	16	clearly turned it on, so it suggests to me
17		group that would allow some level of	17	that they were probably, and we know some
18		comparison between the two of them. And	18	customers are doing it, they're turning off
19		basically that's what we did, we compared	19	all the breakers for their heat and when it
20		those. We went in and we looked at the data	20	gets really cold, they turn them back on in
21		to see how the load shapes would vary, you	21	order to heat the place up, then you see a
22		know. Since coming on the stand, I looked	22	little bit of a spike at that point in time.
		under the head of it year lineary. I recommine	23	TOPINSON OF
23		under the hood of it, you know, I recognize		JOHNSON, Q.C.:
1		in hindsight that there might be some flaws in regard to the interpretation of it. As a	24 25	Q. So you indicated that you approached customers in terms of participation in a

Apr	11 12, 2016			NL Power GRA 2016
		Page 85		Page 87
1		study that had certain requirements of them	1	making sure we're doing the right thing by
2		but they weren't willing takers of what	2	customers is what I think the Public
3		you're suggesting, what sort of—what would	3	Utilities Board would expect, so we will
4		you actually have liked to have been able to	4	continue to monitor it and do what we can to
5		observe, as opposed to what you got?	5	make sure the right things go and get
6	MR. HENDE		6	installed, but to offer heat pumps—you know,
7	Α.	I guess ideally you'd love to be in there—as	7	discounts and all that sort of stuff is,
8		an engineer, had all the money in the world,	8	might be a little bit too far to go,
9		I'd love to be able to do what Dave Adams	9	especially since it's not passing these
10		did for every single home through the	10	tests.
11		coldest winter period and hope that you get	11	JOHNSON, Q.C.:
12		a severe peak this winter, it's about one in	12	Q. What sort of peak type of benefits, you
13		every five years we seem to be getting the	13	know, what order of magnitude or peak
14		severe weather peak where the combination is	14	benefits, you know, relative to if someone
15		such that a peak is quite a bit higher than	15	is now heating with electricity baseboard to
16		what it otherwise would be and that's what	16	go into one of these, would you have to see,
17		we got to size the system for, so as a	17	do you think, in order to say, yes, that's
18		result, you know, ideally I'd love to be	18	worth incenting these from a demand
19		able to do what David did, collect that kind	19	perspective?
20		of data, probably collect even the data that	20	MR. HENDERSON:
21		Winston Baker put in his questions, which is	21	A. From our numbers we couldn't get it to pass
22		a huge amount of data on the operation of	22	the total resource cost test, throwing in
23		each one. As an engineer, I'd love to have	23	peak savings that were equivalent to the
24		that data and I'd love to have it operating	24	load shape for electric heat; in other
25		through these really cold periods that	25	words, if we could get efficiency gains at
F		Page 86	<u> </u>	Page 88
1		happen, you know, every once every few	1	peak the same as the efficiency gains you're
2		years, but those types of studies can be	2	getting on average for heat pumps, we kind
3		expensive, you may have to wait for that	3	of tried those types of numbers to see if
4		time period, you know, and maybe you'll get	4	that would make it pass and it didn't.
5		the results out of it. Generally speaking,	5	Maybe once we get out into the future and we
$\frac{3}{6}$		knowing these things are being installed in	6	find out that the marginal cost, the market
7		so many jurisdictions, we are primarily	7	base cost or the amount of value that we
8		focussed on getting data that's available	8	would get from savings increases enough to
9		from industry, you know, knowing that this	9	justify putting rebates on it, you know,
10		stuff does not pass the total resource cost	10	we'll probably consider it. The only thing
11		test. We think it wouldn't necessarily be	11	I caveat that with is that if the market is
12		looked upon too highly if we're not doing	12	doing well anyway, I don't think we need to
13		what's least cost for our customers and as a	13	be wasting money on it because the market is
14		result, we will deem it our spending, I	14	doing well and these things are coming in.
15		think our budget for this is one hundred	15	If the market needs a push and the market
16		thousand bucks. We'll do our best to get	16	barrier suggests that the cost of the unit
17		all this information out for one hundred	17	is a barrier, then yes, we would consider
18		thousand dollars to everything. Our program	18	it, so you've got to, you know, look at all
19		doesn't include television advertising	19	those things. The other piece we mentioned
20		because that stuff is starting to get	20	was installers. We don't want to be out
21		expensive and we want to show clear results	21	there saying, bang, bang, everybody should
22		from it, so we'll do what we can to help	22	install these, they're absolutely fantastic
23		move the market towards where we need to go.	23	and it would save us money, reduce your
		•	24	•
24		Obviously this is a very important end use,	24	bills and all that kind of stuff and they
24 25		Obviously this is a very important end use, electric heat is a big end use for us and	25	get frustrated because they can't find

Apri	11 12, 2010		NL FOWEI OKA 2010
	Page 89		Page 91
1	anybody to install them or anybody to	1	Q. And I guess he was interested as well as to,
2	service them, which is a big issue for whole	2	and I take it the answer is probably no, but
3	home heat pumps right now, you know, it's-	- 3	was there any assessment as to the
4	all those considerations got to get into	4	appropriate sizing of the heat pump in
5	place before we do that.	5	regard to each house? I take it, there
6	JOHNSON, Q.C.:	6	wasn't?
7	Q. In terms of some of the questions that Mr.	7	MR. HENDERSON:
8	Adams, I think you indicated Winston Baker	, 8	A. No, the study that we are trying to do was
9	but I think it's Winston Adams, obviously,	9	having a look at what the impact might be
10	just for the record.	10	given the existing market conditions. It
11	MR. HENDERSON:	11	would contain a full range of operating
12	A. Do that all the time, I apologize for that.	12	issues, you know, that sort of stuff, you
13	JOHNSON, Q.C.:	13	know, with customers. We know that there's
14	Q. His ears are burning. He had a question as	14	customers out there using them totally
15	to whether or not the homes that were	15	inappropriately, poor coordination with
16	assessed out of your consumer group, if	16	regard to the thermostats, you know, we know
17	there was any assessment in terms of whether	- 1	that certain products and people are having
18	the mini-splits that they were using were	18	problems with defrost cycles and those types
19	good, bad, middle of the road units or just,	19	of things, so in your buying of your heat
20	my understanding is that there was no	20	pump, you should make inquiries about the
21	assessment of the type of unit that they	21	defrost and making sure it defrosts properly
$\begin{vmatrix} 21\\22\end{vmatrix}$	had, what type of efficiencies, et cetera	$\begin{bmatrix} 21 \\ 22 \end{bmatrix}$	because these things can get stuck in a
23	they were expected to have at the	23	defrost mode and just continuously chuck
24	manufacturer, would that be –	24	away trying to get the ice off the machine
25	MR. HENDERSON:	25	and having no luck with it.
23		123	ū
,	Page 90	١.	Page 92
	A. No, that's right, we captured the		JOHNSON, Q.C.:
2	manufacturer, the model, I guess, but we	$\frac{1}{2}$	Q. So I guess similarly there was no data as to
3	didn't capture the details associated with	$\frac{1}{3}$	whether they had them in set-back modes or
4	it. The manufacturers themselves certainly	4	if they were using them properly or anything
5	give you an inkling of the quality of the	5	like that, I take it?
6	units that are being installed and there's	6	MR. HENDERSON:
7	no question there's certainly a fairly wide	7	A. Yeah, in our survey of the 128, the customer
8	range of quality going in there and hence,	8	survey, we did collect a certain type of
9	we want to move the market to the Tier III	9	behavioural data. For instance, the set-
10	heat pumps, you know, and our study did no	- 1	back mode, I think I might have already
11	try to attempt, and I doubt if we'd get	11	mentioned it, I'm not sure, 55 percent of
12	particularly strong results to see the	12	the customers or the people we surveyed
13	extent to which the manufacturer type migh	13	never used the set-back mode. I would say
14	be correlated with savings. We didn't do	14	on average there's a general understanding
15	that.	15	you shouldn't.
16	JOHNSON, Q.C.:	16	JOHNSON, Q.C.:
17	Q. Or capacity type, you know, some of the	17	Q. You shouldn't, just leave it there.
	Q. Of capacity type, you know, some of the		100 1101 1000 0011
18	good, better and the best—good, better, bes	18	MR. HENDERSON:

MR. HENDERSON: A. Yeah, I know we already asked them a question, we had Krista talk to them and	3 4 5 6 7 8 9 10 11 12 13 14	A.	level of diversity between them all and all that kind of stuff. We know that the, if you're talking about energy, part of the testing that goes into these heat pumps includes something called the heating seasonal performance factor and it tries to capture the impact of the frost on energy savings and the extent to which there is electric heat, a backup necessary for the typical type of installation, those types of things, so you know, that data is kind of available but that's pretty broad based, you
3 4 5 6 7 8 9 10 11 12 13 14 15	JOHNSON, Q.C.: Q. In terms of the work that's ongoing at Nova Scotia Power in terms of their study on peak demand impacts of these mini-slits, the report may not be ready, but I wonder would it be possible to see if we could get a scope of what they're looking at as an undertaking, in terms of how they're going about that study? MR. HENDERSON: A. Yeah, I know we already asked them a question, we had Krista talk to them and they did provide some information on it. I	3 4 5 6 7 8 9 10 11 12 13 14 15	A.	level of diversity between them all and all that kind of stuff. We know that the, if you're talking about energy, part of the testing that goes into these heat pumps includes something called the heating seasonal performance factor and it tries to capture the impact of the frost on energy savings and the extent to which there is electric heat, a backup necessary for the typical type of installation, those types of things, so you know, that data is kind of available but that's pretty broad based, you know. We would, four our environment and I know Dave Adams didn't seem to think it was
3 4 5 6 7 8 9 10 11 12 13 14 15 16	JOHNSON, Q.C.: Q. In terms of the work that's ongoing at Nova Scotia Power in terms of their study on peak demand impacts of these mini-slits, the report may not be ready, but I wonder would it be possible to see if we could get a scope of what they're looking at as an undertaking, in terms of how they're going about that study? MR. HENDERSON: A. Yeah, I know we already asked them a question, we had Krista talk to them and they did provide some information on it. I don't think it was that detailed, so I'm not	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	A.	level of diversity between them all and all that kind of stuff. We know that the, if you're talking about energy, part of the testing that goes into these heat pumps includes something called the heating seasonal performance factor and it tries to capture the impact of the frost on energy savings and the extent to which there is electric heat, a backup necessary for the typical type of installation, those types of things, so you know, that data is kind of available but that's pretty broad based, you know. We would, four our environment and I
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	JOHNSON, Q.C.: Q. In terms of the work that's ongoing at Nova Scotia Power in terms of their study on peak demand impacts of these mini-slits, the report may not be ready, but I wonder would it be possible to see if we could get a scope of what they're looking at as an undertaking, in terms of how they're going about that study? MR. HENDERSON: A. Yeah, I know we already asked them a question, we had Krista talk to them and they did provide some information on it. I don't think it was that detailed, so I'm not sure to what extent there is a detailed	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	A.	level of diversity between them all and all that kind of stuff. We know that the, if you're talking about energy, part of the testing that goes into these heat pumps includes something called the heating seasonal performance factor and it tries to capture the impact of the frost on energy savings and the extent to which there is electric heat, a backup necessary for the typical type of installation, those types of things, so you know, that data is kind of available but that's pretty broad based, you know. We would, four our environment and I know Dave Adams didn't seem to think it was much of an issue for him, but in all periods
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	JOHNSON, Q.C.: Q. In terms of the work that's ongoing at Nova Scotia Power in terms of their study on peak demand impacts of these mini-slits, the report may not be ready, but I wonder would it be possible to see if we could get a scope of what they're looking at as an undertaking, in terms of how they're going about that study? MR. HENDERSON: A. Yeah, I know we already asked them a question, we had Krista talk to them and they did provide some information on it. I don't think it was that detailed, so I'm not sure to what extent there is a detailed scope document, but we can certainly provide	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	A.	level of diversity between them all and all that kind of stuff. We know that the, if you're talking about energy, part of the testing that goes into these heat pumps includes something called the heating seasonal performance factor and it tries to capture the impact of the frost on energy savings and the extent to which there is electric heat, a backup necessary for the typical type of installation, those types of things, so you know, that data is kind of available but that's pretty broad based, you know. We would, four our environment and I know Dave Adams didn't seem to think it was much of an issue for him, but in all periods during the winter season, how often are we
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	JOHNSON, Q.C.: Q. 1 1011	1 12, 2016		NL Power GRA 2016
	Page 97		Page 99
1	peak, it's typically a grey day, blowing a	1	MR. HENDERSON:
2	gale, you know, unless we've come off a	2	A. Yeah, it cost Newfoundland Power—
3	period of snow beforehand, the ice is	3	Newfoundland Power's expense is around
4	probably compacted and frozen in place, so	4	200,000 and we know that Hydro contributed
5	it may not be blowing around, you know, that	5	roughly \$100,000.00 to the completion of the
6	type of stuff. So for all those types of	6	report itself, basically the contract with
7	complications with these operations,	7	ICF. We're not sure what Hydro's other
8	counting on savings which utilities will	8	expenses would be, so you can kind of think
9	need to do in order to be assured that we've	9	of it as being roughly \$300,000.00 project.
10	got enough in place to supply customers, you	10	JOHNSON, Q.C.:
11	will tend to want to take a conservative	11	Q. And he was interested in whether the hot
12	approach to it.	12	water tank pilot study was there a similar
13	JOHNSON, Q.C.:	13	study done some 25 years ago?
14	Q. I sent over a question as well regarding the	14	MR. HENDERSON:
15	cost of this mini-split study, did you say	15	A. We did do a study quite a few years ago on
16	it was a hundred grand?	16	hot water tanks. I would say at that point
1	MR. HENDERSON:	1	in time it was much more, I apologize for
17		17	
18	A. No, that study itself, just a minute now,	18	the wording, but bleeding edge technology at
19	subject to check, I'm pretty sure I got it	19	the time and there was technology issues
20	right off the top of my mind, I looked at	20	associated with it and one of the matters
21	those numbers yesterday, it was around	21	that happened during the period in which we
22	\$51,000.00.	22	were doing it, it was in the early '90s,
23	JOHNSON, Q.C.:	23	late '80s in which there was—Hydro was
24	Q. And then there was a question as well about	24	expecting to have to add a bunch of capacity
25	the cost of the hot water pilot study?	25	to the system and ERCO came off the system,
-		_	
	Page 98		Page 100
1	Page 98 MR. HENDERSON:	1	Page 100 200 megawatts came off the system, so the
1 2	· ·	1 2	
1 2 3	MR. HENDERSON:	1 -	200 megawatts came off the system, so the
1	MR. HENDERSON: A. Yeah, that was around 620,000.	2	200 megawatts came off the system, so the need for this type of program practically
3	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.:	2 3	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it
3 4	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that	2 3 4	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new
3 4 5	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I	2 3 4 5	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology
3 4 5 6	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going	2 3 4 5 6	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it,
3 4 5 6 7	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right?	2 3 4 5 6 7	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the
3 4 5 6 7 8	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON:	2 3 4 5 6 7 8	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology
3 4 5 6 7 8 9	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's	2 3 4 5 6 7 8 9	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is
3 4 5 6 7 8 9 10	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to	2 3 4 5 6 7 8 9 10	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved
3 4 5 6 7 8 9 10 11	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make	2 3 4 5 6 7 8 9 10 11	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.:
3 4 5 6 7 8 9 10 11 12	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work.	2 3 4 5 6 7 8 9 10 11 12 13	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.: Q. In terms of—there's some questions as well,
3 4 5 6 7 8 9 10 11 12 13 14	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work. JOHNSON, Q.C.:	2 3 4 5 6 7 8 9 10 11 12 13 14	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.: Q. In terms of—there's some questions as well, as you're aware, regarding peak demand
3 4 5 6 7 8 9 10 11 12 13 14 15	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work. JOHNSON, Q.C.: Q. I guess, how would you compare the rigor of	2 3 4 5 6 7 8 9 10 11 12 13 14 15	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.: Q. In terms of—there's some questions as well, as you're aware, regarding peak demand reductions to 2017. I guess in that regard
3 4 5 6 7 8 9 10 11 12 13 14 15 16	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work. JOHNSON, Q.C.: Q. I guess, how would you compare the rigor of the hot water pilot study to the mini-split	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.: Q. In terms of—there's some questions as well, as you're aware, regarding peak demand reductions to 2017. I guess in that regard I guess we can turn to the Demand Management
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work. JOHNSON, Q.C.: Q. I guess, how would you compare the rigor of the hot water pilot study to the mini-split study?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.: Q. In terms of—there's some questions as well, as you're aware, regarding peak demand reductions to 2017. I guess in that regard I guess we can turn to the Demand Management Potential Study again, Mr. Henderson, if you
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work. JOHNSON, Q.C.: Q. I guess, how would you compare the rigor of the hot water pilot study to the mini-split study? MR. HENDERSON:	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.: Q. In terms of—there's some questions as well, as you're aware, regarding peak demand reductions to 2017. I guess in that regard I guess we can turn to the Demand Management Potential Study again, Mr. Henderson, if you wouldn't mind.
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work. JOHNSON, Q.C.: Q. I guess, how would you compare the rigor of the hot water pilot study to the mini-split study? MR. HENDERSON: A. With the mini-split heat pump study had a	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. You know, with the new one, we know that other people are doing it, it's gaining a lot of traction in the market, having—using this type of technology and so as a result certainly a new study is warranted because technology has improved lightyears since then. JOHNSON, Q.C.: Q. In terms of—there's some questions as well, as you're aware, regarding peak demand reductions to 2017. I guess in that regard I guess we can turn to the Demand Management Potential Study again, Mr. Henderson, if you wouldn't mind. MS. GLYNNE:
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	MR. HENDERSON: A. Yeah, that was around 620,000. JOHNSON, Q.C.: Q. 620. And that study determined that or that pilot study, I take it, confirmed that I guess there was limited utility in going forward in a broader fashion, is that right? MR. HENDERSON: A. Yeah, basically for the savings that's attributable to hot water tanks of .6, the technology cost was too much. You'd have to find more savings than that in order to make the technology work. JOHNSON, Q.C.: Q. I guess, how would you compare the rigor of the hot water pilot study to the mini-split study? MR. HENDERSON: A. With the mini-split heat pump study had a number of objectives, the piece itself	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	200 megawatts came off the system, so the need for this type of program practically disappeared, so as a result, you know, it would have no economics and the technology was a challenge. Apr	il 12, 2016		NL Power GRA 2016
	Page 105		Page 107
1	JOHNSON, Q.C.:	1	record, is CA-NP-406 in Newfoundland Power's
2	Q. And those assumptions would be based on the	2	GRA and I take it you can confirm that at
3	assumption that the full 2 ½ percent	3	that time the company was confirming that if
4	increase would get passed along.	4	the application was approved as filed that
5	MR. HENDERSON:	5	the percentage by which customer rates would
6	A. That's correct.	6	have increased on a compounded basis since
7	JOHNSON, Q.C.:	7	2007 would be 28 percent, 31 percent since
8	Q. Okay. So, can we assume that if, for	8	2008 and 21 percent since 2009?
9	instance, the Board were not to accept that	9	MR. HENDERSON:
10	Newfoundland Power's return on equity would	10	A. That's correct.
11	go to 9.5 percent, that we could possibly	11	JOHNSON, Q.C.:
12	see further growth in domestic energy sales	12	Q. You were probably responsible or your team
13	under the rates in 2016 and 2017?	13	was responsible for providing that reply?
14	MR. HENDERSON:	14	MR. HENDERSON:
15	A. Yes, it would be a small increase, yes.	15	A. That's right.
16	JOHNSON, Q.C.:	16	JOHNSON, Q.C.:
17	Q. Okay. And in terms of a cross aid that was—	17	Q. And finally, can I just turn to CA-NP-177,
18	and I guess that will be figured out in a	18	Attachment B. This is one of the ones that
19	compliance application once the Board gives	19	came over in the stranded site. Attachment
20	its order, right?	20	B, page 317 or 418. I believe this is taken
21	MR. HENDERSON:	21	from Newfoundland Power's most recent filing
22	A. Yes, that's right.	22	with the Board in terms of its quarterly
23	JOHNSON, Q.C.:	23	report. And just to confirm, if we go down
24	Q. Okay. And in terms of a cross aid that I	24	on the 2015, keep on going down further,
25	sent across, Item No. 1 on my April 11th	25	Samantha. So, sales growth in 2015 was at 1
	Page 106		Page 108
1	letter. This is one that I previously	1	percent and there was 2.3 percent in 2014,
2	provided to Mr. Smith.	2	do you see that?
3	MS. GLYNNE:	$\frac{1}{3}$	MR. HENDERSON:
4	Q. This would be entered as Information No. 41.	4	A. Yes.
5	JOHNSON, Q.C.:	5	JOHNSON, Q.C.:
6	Q. Thank you. I don't believe it was a point	6	Q. So, the sales growth, is this like kilowatt
7	that I had raised with Mr. Smith when I sent	7	hour sales growth in 2015.
8	over that cross aid with him. I just wanted	8	MR. HENDERSON:
9	to raise it with you for a moment, page 4 of	9	A. This is, yes, electricity sales, on the line
10	this document. For the record, this is the	10	above gigawatt hours.
11	introduction evidence of Newfoundland	11	JOHNSON, Q.C.:
12	Power's May 2007 filing. And at page 4 we	12	Q. Right, okay. And in terms of—if we see the
13	see, at line 8, the company indicating that	13	2.3 percent in 2014 and I take it in terms
14	since 2002 customer rates have increased by	14	of the customer and energy forecast, it
15	over 26 percent that was taken on a compound	15	refers to the 2009 to 2014 period on page 5
16	basis.	16	as being, reflecting a robust economic
17	MR. HENDERSON:	17	performance of the Province's economy. Just
18	A. That's correct.	18	go back there for a moment. I'm referring
19	JOHNSON, Q.C.:	19	there now, Samantha, to the Customer Energy
20	Q. Okay. And then if we could go over next to	20	Demand Forecast again, the first revision.
	•	21	Yes, towards the top, you see it highlighted
21	the cross aid No. 3 on that same document.	1	,
21 22	the cross aid No. 3 on that same document. MS. GLYNNE:	22	or shaded there, during 2009 2014 period the
22	MS. GLYNNE:	22 23	or shaded there, during 2009 2014 period the robust economic performance of the
1	MS. GLYNNE: Q. We'll enter that as Information No. 42.		robust economic performance of the
22 23	MS. GLYNNE: Q. We'll enter that as Information No. 42. JOHNSON, Q.C.:	23	

Page 110 1 A. During the '90s the economy was—through the 2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. 1 4 don't know, it might have averaged .7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as I see 17 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 next at starts forecast we were receiving for quite 24 starts forecast we were receiving for quite 24 page 12 a few years was always lower than what actually happened. Now the forecasts tha actually happen	_	11 12, 2016			NL Power GRA 2016
perspective, Mr. Henderson, you joined Newfoundland Power as a young man, probably about 30 and you're still a young man. Comment of the strom up here, I can speak for me, not for this crowd here, but he looks pretty young to me. Newfoundland Power as a young man. Comment of the strom up here, I can speak for me, not for this crowd here, but he looks pretty young to me. 3 Newfoundland Power as a young man, probably 4 4 4 4 4 years out, can you offer any insights on that?	1		1.6 and 2.2. Just to put that in	1	JOHNSON, Q.C.:
5 CHAIRMAN: 6 Q. He is from up here, I can speak for me, not for this crowd here, but he looks pretty young to me. 9 JOHNSON, Q.C.: 10 Q. When you wore a younger man's clothes. 11 MR. HENDERSON: 12 A. I think this is the same jacket. 13 CHAIRMAN: 14 Q. Oh, you're frugal. 15 JOHNSON, Q.C.: 16 Q. So, just to put that in perspective, like, we just saw the 2014 on that previous chart was 2.3 percent sales growth; 2015 was 1 m terms of what sales were—how robust was 2.4 m terms of what sales were—how robust was 2.3 that compared to what New Youndal Power was 2.5 MR. HENDERSON: Page 110 1 A. During the '90s the economy was—through the 2.5 MR. HENDERSON: Page 110 1 A. During the '90s the economy was—through the 2.5 m you. When you work this period which are period things of the conomy as picking up, the house starts forecast were receiving for quite started doing quite well and our sales growth period of gives was below 1 percent. I buring that time period things one weight in grow that have averaged. 7 or .6 percent. During that time period things one weight have averaged. 7 or .6 percent. During that time period things one weight have averaged. 7 or .6 percent. During that time period things one weight the decades. The economic forecast as I see outple of decades in the most recent of the conomy was—through the 1 started going up in cost, the economy as a firsk, and that's the type of risk we kind of grows me pause when I'm looking forward as a twist through the '90s. So, that kind and the most recent in the mover the next five years as a sa a so what we're going to be facing over the 2 as to what we're going to be facing over the 2 as to what we're going to be facing over the 2 as to what we're going to be facing over the 2 as to what we're going to be facing over the 2 as to what we're going to be facing over the 2 as to what we're going to be facing over the 2 turnaround we're seeiing is that while 2 as to what we're going to be facing over the 2 turnaround we're seeiing is that while 2 turnaround we're s	2		perspective, Mr. Henderson, you joined	2	Q. I guess, in terms of your forecasting out
5 CHAIRMAN: 6 Q. He is from up here, I can speak for me, not 7 for this crowd here, but he looks pretty 8 young to me. 8 distance. We primarily do short range 10 JOINSON, Q.C.: 10 Q. When you wore a younger man's clothes. 11 MR, HENDERSON: 12 A. Obviously, five years out is a fair 13 CHAIRMAN: 13 CHAIRMAN: 14 Q. Oh, you're frugal. 15 JOHNSON, Q.C.: 16 Q. So, just to put that in perspective, like, 16 Generally speaking, the accuracy of our 17 we just saw the 2014 on that previous chart 18 was 2.3 percent sales growth; 2015 was 1 19 percent and then we're talking about that 19 five year tends to have always reflected the 20 period of 2004 be 02014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newloundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 Page 110 1 A. During the '90s the economy was—through the 2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. I 4 don't know, it might have averaged. 7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 18 improving. You know, there's a bunch of 19 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as I see 16 the mover the next ive years as far as a 17 a fairly sustained period of well above 18 couple of decades in	3		Newfoundland Power as a young man, probably	3	like that, the ability to be accurate five
6 Q. He is from up here, I can speak for me, not for this crowd here, but he looks pretty young to me. 8 young to me. 9 JOHNSON, Q.C.: 9 forecast out five years. Hydro does a much 10 Q. When you wore a younger man's clothes. 10 longer one, and we do review it with Hydro, our short term to make sure regenerally 12 A. I think this is the same jacket. 12 in sync with each other over the short term. 13 CHAIRMAN: 13 We tend to use for forecasting out that far, 14 Q. Oh, you're frugal. 14 Conference Board of Canada forecasts. 15 JOHNSON, Q.C.: 15 Generally speaking, the accuracy of our 16 Q. So, just to put that in perspective, like, 16 forecast very directly reflects the economic 17 we just saw the 2014 on that previous chart 17 impacts, inputs that we accuracy of our 19 percent and then we're talking about that 19 percent and then we're talking about that 19 percent and then we're talking about that 20 period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 21 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 25 MR. HENDERSON: 25 MR. HENDERSON: 25 MR. HENDERSON: 26 percent. Draing that time period things 25 mich was every weak. Our sales growth 24 don't know, it might have averaged. 7 or .6 percent. 1 don't know, it might have averaged. 7 or .6 percent. 1 John which we we're seeing are probably more in line will we're seeing are probably more in line will have averaged. 7 or .6 percent. 1 John which we're seeing are probably more will have a we're seeing are probably on the work in was a large will would characterize those 4 what we're seeing are probably more will have a we're seeing are probably more will have a we're seeing are probably more will have a we're seein and that's the type of this we're seein as a fas a	4		about 30 and you're still a young man.	4	years out, can you offer any insights on
for this crowd here, but he looks pretty young to me. 8 distance. We primarily do short range forecast out five years. Hydro does a much longer one, and we do review it with Hydro, our short term to make sure we're generally 2 A. I think this is the same jacket. 11 MR. HENDERSON: 12 in sync with each other over the short term. 13 CHAIRMAN: 14 Q. Oh, you're frugal. 15 JOHNSON, Q.C.: 16 Q. So, just to put that in perspective, like, 17 we just saw the 2014 on that previous chart 18 was 2.3 percent alset growth, 2015 was 1 19 percent and then we're talking about that 20 period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 A. Obviously, five years out is a fair 4 don't know, it might have an eight of Canada forecasts. 27 In think this is the same jacket. 28 in terms of what sales were—how robust was 29 that compared to what Newfoundland Power was 20 that compared to what Newfoundland Power was 21 used to over a long period of time? 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 Page 110 27 A. During the '90s was below 1 percent. I 3 during the '90s was below 1 percent. I 4 don't know, it might have averaged .7 or .6 5 percent. During that time period things 6 like household income didn't go up very 4 don't know, it might have averaged .7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 18 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The eco	5	CHAIRMAN	· ·	5	that?
8 young to me. 9 JOINSON, Q.C.: 10 Q. When you wore a younger man's clothes. 11 MR. HENDERSON: 12 in style of the same jacket. 13 CHAIRMAN: 14 Q. Oh, you're frugal. 15 JOINSON, Q.C.: 16 Q. So, just to put that in perspective, like, 16 Generally speaking, the accuracy of our 17 we just saw the 2014 on that previous chart 18 was 2.3 percent sales growth; 2015 was 1 19 percent and then we're talking about that 19 percent and then we're talking about that 20 period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 MR. HENDERSON: 27 Page 110 28 A. During the '90s the economy was—intrough the 29 given for the compared to what Newfoundland Power was 30 during the '90s was below 1 percent. I 4 don't know, it might have averaged .7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 10 improving. You know, theer's a bunch of 29 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecats as I see 16 in Porceast goes looks, as far as a growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 as to what we're going to be facing over the 24 as to what we're seeing is that while 25 normal growth? 26 normal growth? 27 are read and a forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 10 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the	6	Q.	He is from up here, I can speak for me, not	6	MR. HENDERSON:
9 JOHNSON, Q.C.: 10 Q. When you wore a younger man's clothes. 11 MR. HENDERSON: 12 A. I think this is the same jacket. 13 CHAIRMAN: 13 We tend to use for forecasting out that far, 14 Q. Oh, you're frugal. 14 Q. So, just to put that in perspective, like, 16 Q. So, just to put that in perspective, like, 17 we just saw the 2014 on that previous chart 18 was 2.3 percent sales growth; 2015 was 1 19 percent and then we're talking about that 19 five years tends to other over the short term. 18 was 2.3 percent sales growth; 2015 was 1 19 percent and then we're talking about that 19 percent and then we're talking about that 19 five year tends to do there onomic 19 percent and then we're talking about that 19 five year tends to whe generally ye 20 period of 2009 to 2014 being robust. Now, 20 errors that you're seeing ant be economic 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 Page 110 27 Page 110 28 A During the '90s the economy was—through the 29 dynamics over this period which are probably 30 during the '90s was below I percent. 1 40 don't know, it might have averaged. 7 or .6 41 don't know, it might have averaged. 7 or .6 42 don't know, it might have averaged. 7 or .6 43 defined that time period things 44 don't know, it might have averaged. 7 or .6 45 percent. During that time period things 46 like household income didn't go up very 47 much. Since 2000 the growth rate has been 48 improving. You know, there's a bunch of 49 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 19 growt	7		for this crowd here, but he looks pretty	7	A. Obviously, five years out is a fair
10 Q. When you wore a younger man's clothes. 10 longer one, and we do review it with Hydro, 11 MR. HENDERSON: 11 our short term to make sure we're generally 12 A. I think this is the same jacket. 12 in syne with each other wore the short term. 13 We tend to use for forecasting out that far, 14 Q. Oh, you're frugal. 14 Conference Board of Canada forecasts. 15 JOHNSON, Q.C.: 15 Generally speaking, the accuracy of our 16 Q. So, just to put that in perspective, like, 16 forecast very directly reflects the economic 17 we just saw the 2014 on that previous chart 17 impacts, inputs that we are given. As a 18 was 2.3 percent sales growth; 2015 was 1 18 result, you know, the errors looking out 19 percent and then we're talking about that 19 five year tends to have always reflected the 20 period of 2009 to 2014 being robust. Now, 20 errors that you're seeing in the economic 21 just put that into some perspective for us 21 forecast that we receive. One area that I'm sure very body here is kind of aware of was 22 sure verybody here is kind of aware of was 24 starts forecast we were receiving for quite 24 starts forecast we were receiving for quite 24 starts forecast we were receiving for quite 25 MR. HENDERSON: 25 Page 110 1 a few years was always lower than what 20 a few years was always lower than what 21 a few years was always lower than what 22 a few years was always lower than what 23 a few years was always lower than what 24 a few years was always lower than what 25 a few years was always lower than what 26 a few years was always lower than what 27 a few years was always lower than what 28 a few years was always lower than what 28 a few years was always lower than what 29 a few years was always lower than what 29 a few years was always lower than what 20 a few years was always lower than what 20 a few years was always lower than what 20 a few yea	8		young to me.	8	distance. We primarily do short range
11 MR. HENDERSON: 12 A. Think this is the same jacket. 13 CHAIRMAN: 14 Q. Oh, you're frugal. 15 JOHNSON, Q.C.: 15 Generally speaking, the accuracy of our foreacts the conomic of the weight of the period of 2009 to 2014 being robust. Now, 20 errors that you know, the errors looking out the tar of weight of the period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: Page 110 1 A. During the '90s the economy was—through the 29 '90s it was very weak. Our sales growth 24 don't know, it might have averaged. 7 or .6 ike household income didn't go up very much. Since 2000 the growth rate has been improving. You know, there's a bunch of 9 dynamics over this period which are probably 9 started doing quite well and our sales 20 growth are the started going up in cost, the economy 11 consider that being the Conference Board of Canada forecasts. Page with the conformic impacts, inputs that we are given. As a result, you know, the errors looking out five year tends to have always reflected the conformic impacts, inputs that we are given. As a result, you know, the errors looking out five year tends to have always reflected the conformic five years was alway to we reseing in the economic of result in the period of time? 24 starts forecast that we receive. One area that I'm 22 starts forecast that we receive. One area that I'm 24 starts forecast we were receiving for quite 25 mk. Hence of the period of time? 25 MR. HENDERSON: Page 110 1 A. During the '90s the economy was—through the '90s it was very weak. Our sales growth 22 actually happened. Now the forecasts it when the economy was picking up, the house of the what we're seeing are probably more in line with a period with the period things is the what we're seeing are probably more in line with the period with the period with the period with the economy is turning over, but it is a many tha	9	JOHNSON, Q).C.:	9	forecast out five years. Hydro does a much
12 A. I think this is the same jacket. 13 CHAIRMAN: 14 Q. Oh, you're frugal. 15 JOHNSON, Q.C.: 16 Q. So, just to put that in perspective, like, 17 we just saw the 2014 on that previous chart 18 was 2.3 percent sales growth; 2015 was 1 19 percent and then we're talking about that 20 period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 Percent. During that time period things 16 like household income didn't go up very 17 much. Since 2000 the growth rate has been 18 improving. You know, there's a bunch of 9 dynamics over this period which are probably no teworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 the decades. The economic of gives me pause when I'm looking forward as to what we're going to be facing over the 20 mext you know, four or five years as far as a for year, seeing in the contains of the contai	10	Q.	When you wore a younger man's clothes.	10	longer one, and we do review it with Hydro,
13 CHAIRMAN: 14 Q. Oh, you're frugal. 15 JOHNSON, Q.C.: 16 Q. So, just to put that in perspective, like, 17 we just saw the 2014 on that previous chart 18 was 2.3 percent sales growth; 2015 was 1 19 percent and then we're talking about that 20 period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 Page 110 1 A. During the '90s the economy was—through the 2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. 1 4 don't know, it might have averaged, 7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 11 consider that being the Conference Board of Canada for ecasts in the conomic impacts, inputs that we are given. As a result, you know, the errors looking out five year tends to have always reflected the errors that you're seeing in the economic forecast that we receive. One are that I'm five year tends to have always reflected the errors that you're seeing in the economic forecast that we receive. One are that I'm five year tends to have always reflected the errors that you're seeing in the economic forecast that we receive. One are that I'm five year tends to have always reflected the errors that you're seeing in the economic forecast that we receive. One are that I'm five year tends to have always reflected the errors that you're seeing in the economic forecast that we receive. One are that I'm five year tends to have always reflected the errors that you're seeing in the ceonomic sure everybody here is kind of a ware of was sure everybody here is kind of a ware of was sure everybody here is kind of a ware of was sure everybody here is kind and a resu	11	MR. HEND	ERSON:	11	our short term to make sure we're generally
14 Conference Board of Canada forecasts.	12	A.	I think this is the same jacket.	12	in sync with each other over the short term.
15 JOHNSON, Q.C.: 16 Q. So, just to put that in perspective, like, we just saw the 2014 on that previous chart 17 we just saw the 2014 on that previous chart 18 was 2.3 percent sales growth; 2015 was 1 19 percent and then we're talking about that 20 period of 2009 to 2014 being robust. Now, 20 errors that you're seeing in the economic 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: Page 110 A. During the '90s the economy was—through the 290s it was very weak. Our sales growth 3 during the '90s was below 1 percent. 1 4 don't know, it might have averaged. 7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 11 consider that being the Conference Board 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as 1 see 17 them over the next five years as far as a 18 forecast goes looks, as far as a growth in 19 let's say, customer income, is worse than we're seeing is that while 20 and that was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 22 turnaround we're seeing is that while 22 turnaround we're seeing is that while 22 turnaround we're seeing is gourt whell and our of five years. So, I'm 20 facing over the 22 turnaround we're seeing is that while 22 turnaround we're seeing	13	CHAIRMAN	· ·	13	We tend to use for forecasting out that far,
16 Q. So, just to put that in perspective, like, we just saw the 2014 on that previous chart was 2.3 percent sales growth; 2015 was 1 ls result, you know, the errors looking out five year tends to have always reflected the 20 period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 26 Page 110 1 A. During the '90s the economy was—through the 2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. 1 don't know, it might have averaged. 7 or .6 for percent. During that time period things 6 like household income didn't go up very 6 like household mome didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 16 decades. The economic forecast as I see 17 them over the next five years as far as a 18 result, you know, four 's a low hat we're seeing in the economic forecast as I see 16 decades. The economic of time? 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 not what we're going to be facing over the 22 turnaround we're seeing is that while 22 turnaround we're seeing is that while 22 turnaround we're seeing is that while housing starts is declining, our average us 24 sure everybody here ros kind of have resored the stration of them over the pext for them over the pext for talking about hat the economic five ears as far as a 1 five year so far a 2 for the percent of them over the next five years as far as a 1 for exact yers given have we're seeing is that while 20 most work point of five years. So, I'm 20 for the percent sales growth in 19 let's say, customer inco	14	Q.	Oh, you're frugal.	14	Conference Board of Canada forecasts.
17	15	JOHNSON, Q).C.:	15	Generally speaking, the accuracy of our
18 was 2.3 percent sales growth, 2015 was 1 19 percent and then we're talking about that 20 period of 2009 to 2014 being robust. Now, 21 just put that into some perspective for us 22 in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: Page 110 1 A. During the '90s the economy was—through the 2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. I 4 don't know, it might have averaged .7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as I see 17 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 next, you know, for or five years. So, I'm 24 proved that the economy is turning over, but it is a 25 proved the economy is doing. 26 proved the economy is doing. 27 proved the economy is doing. 28 proved the economy is doing. 29 proved the economy is doing. 30 proved when the proved the economy is doing. 31 percent or a fairly sustained period of well above normal', of gives me pause when I'm looking forward 27 average is doing quite well. The big 28 proved the economy is turning over, the life of proventy is one over the proved the economy is the economy is the economy is doing. 32 proved the economy is doing. 33 proved the economy is doing. 34 proved the economy is doing. 35 proved the economy is doing. 36 proved the econ	16	Q.	So, just to put that in perspective, like,	16	forecast very directly reflects the economic
percent and then we're talking about that period of 2009 to 2014 being robust. Now, in terms of what sales were—how robust was that compared to what Newfoundland Power was that compared to what I'm the over the next five year safe at a that I'm the what it was through the '90s the economy the consolider that being the Conference Board the conomy is furning over, but it is a risk, and that's the type of risk we kind of see in the forecast is the accuracy of, I'll noteworthy is once we hit the 2000s, oil that's the way I would characterize those them over the next five years as far as a growth in, the way I would characterize those them over the next five years as far as a forcest goes looks, as far as growth in, the work in the conomic forecast as I see them over the next five years as far as a forcest the work in the economy is during of gives me pause when I'm looking forward the mover the next five years as far as a forcest goes looks, as far as grow	17		we just saw the 2014 on that previous chart	17	impacts, inputs that we are given. As a
20	18		was 2.3 percent sales growth; 2015 was 1	18	result, you know, the errors looking out
just put that into some perspective for us in terms of what sales were—how robust was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: 25 Page 110 1 A. During the '90s the economy was—through the '90s it was very weak. Our sales growth 2 actually happened. Now the forecasts that 3 during the '90s was below 1 percent. 1 4 don't know, it might have averaged. 7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 15 couple of decades in the most recent 16 decades. The economic forecast as I see 16 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're seeing, and I can't say so far a service. At the economy is turning over, but it is a risk, and that's the type of risk we kind of say, the general view, if you want to consider that being the Conference Board 12 Canada's view. It's a general view of how the economy is doing. 14 JOHNSON, Q.C.: 15 Q. I guess, to put the 1 percent sales growth 16 decades. The economic forecast as I see 16 in 2015 in perspective, that's 1 percent or 17 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 19 let's say, customer inc	19		percent and then we're talking about that	19	five year tends to have always reflected the
22 sure everybody here is kind of aware of was 23 that compared to what Newfoundland Power was 24 used to over a long period of time? 25 MR. HENDERSON: Page 110 1 A. During the '90s the economy was—through the 2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. 1 4 don't know, it might have averaged. 7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as I see 17 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 next everybody here is kind of aware of was 24 starts forecast we were receiving for quite 25 starts forecast we were receiving for quite 26 starts forecast we were receiving for quite 27 a few years was always lower than what 28 actually happened. Now the forecasts tha actually happened. Now the forecasts tha actually happened. Now the forecast we were receiving for uite 28 actually happened. Now the forecast tha cutually happened. Now the forecast was always lower than what 29 actual	20		period of 2009 to 2014 being robust. Now,	20	errors that you're seeing in the economic
that compared to what Newfoundland Power was used to over a long period of time? Page 110 1 A. During the '90s the economy was—through the 2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. 1 4 don't know, it might have averaged .7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades. The economic forecast as I see 17 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 next, you know, flour or five years. So, I'm 23 when the economy was picking up, the housing starts forecast we were receiving for quite a few was always lower than what actually happened. Now the forecast that was through the '90s was below 1 a few re seeing, and I can't say so far a few ve're seeing, and I can't say so far a few ve're seeing, and I can't say so far a few ve're seeing, and I can't say so far a few ve're seeing are probably more in line wi actually happened. Now the thorush that actually happened. Now the th	21		just put that into some perspective for us	21	forecast that we receive. One area that I'm
Page 110 1 A. During the '90s the economy was—through the '90s it was very weak. Our sales growth during the '90s was below 1 percent. I don't know, it might have averaged .7 or .6 percent. During that time period things like household income didn't go up very much. Since 2000 the growth rate has been improving. You know, there's a bunch of dynamics over this period which are probably noteworthy is once we hit the 2000s, oil started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as I see 17 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than what it was through the '90s. So, that kind of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 next task as to what we're going to be facing over the 25 startes doing quite well. The big 22 turnaround we're seeing is that while 23 starts is declining, our average us	22		in terms of what sales were—how robust was	22	sure everybody here is kind of aware of was
Page 110 1 A. During the '90s the economy was—through the '90s it was very weak. Our sales growth during the '90s was below 1 percent. I 3 we're seeing are probably more in line wi what we're seeing, and I can't say so far a come out of a growth period, and as a rest had the economy is turning over, but it is a risk, and that's the type of risk we kind of a risk, and that's the type of risk we kind of a risk, and that's the type of risk we kind of a risk, and that's the type of risk we kind of a row, the economy is turning over, but it is a general view of how the economy is doing.	23		that compared to what Newfoundland Power was	23	when the economy was picking up, the housing
Page 110 1 A. During the '90s the economy was—through the '90s it was very weak. Our sales growth during the '90s was below 1 percent. I don't know, it might have averaged .7 or .6 percent. During that time period things like household income didn't go up very much. Since 2000 the growth rate has been miproving. You know, there's a bunch of dynamics over this period which are probably noteworthy is once we hit the 2000s, oil noteworthy is once we hit the 2000s, oil started doing quite well and our sales growth went up quite a lot. You know, that's the way I would characterize those couple of decades in the most recent them over the next five years as far as a forest as to what we're going to be facing over the pext, you know, four or five years. So, I'm looking forward as a family sustained period of we're seeing, and I can't say so far a few years was always lower than what actually happened. Now the forecasts tha a to what we're seeing are probably more in line with actually happened. Now the forecasts tha actually happened. Now the forecast sub a ctually happened. Now the forecast sub actually happened. Now the fore seeing and I can't say so far a to whether they're	24		used to over a long period of time?	24	starts forecast we were receiving for quite
1 A. During the '90s the economy was—through the '90s it was very weak. Our sales growth during the '90s was below 1 percent. I don't know, it might have averaged .7 or .6 percent. During that time period things like household income didn't go up very like household income didn't go up very much. Since 2000 the growth rate has been limproving. You know, there's a bunch of dynamics over this period which are probably noteworthy is once we hit the 2000s, oil started going up in cost, the economy started doing quite well and our sales growth went up quite a lot. You know, that it's the way I would characterize those couple of decades in the most recent them over the next five years as far as a for gives me pause when I'm looking forward of the conomy starts is declining, our average us a far as going to be facing over the process is that while next, you know, four or five years. So, I'm a few years was always lower than what a catually happened. Now the forecasts the actually happened. Now the forecast tha actually happened. Now the forecast that actually happened. Now the forecast the actually happened. Now the forecast that we're seeing are probably more in line with actually happened. Now the forecast that we're seeing are probably proved. What it was brough the '90s what it was through the '90s what it was through the '90s so that kind of gives me pause when I'm looking forward as to what we're going to be facing over the part of the percent sales growth in, let's say, customer income, is worse than what it was through the '90s. So, that kind of gives me pause when I'm looking forward as to what we're going to be facing over the part of the provent five years. So, I'm the provent was always lower than what actually happened. Now the forecast the actually happened. Now the forecast that was through the '90s what it was through the '90s so to what we're seeing are probably to what we're going to be facing over the percent of the worth the town the forecast gars and I can't say so far a so to what we're going to	25	MR. HEND	ERSON:	25	
2 '90s it was very weak. Our sales growth 3 during the '90s was below 1 percent. I 4 don't know, it might have averaged .7 or .6 5 percent. During that time period things 6 like household income didn't go up very 7 much. Since 2000 the growth rate has been 8 improving. You know, there's a bunch of 9 dynamics over this period which are probably 10 noteworthy is once we hit the 2000s, oil 11 started going up in cost, the economy 12 started doing quite well and our sales 13 growth went up quite a lot. You know, 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as I see 17 them over the next five years as far as a 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 next, you know, four or five years. So, I'm 2 actually happened. Now the forecasts tha we're seeing are probably more in line wi we're seeing, and I can't say so far a to what we're seeing, and I can't say so far a we're seeing, and I can't say so far a to what we're seeing, and I can't say so far a we're seeing, and I can't say so far a to what we're seeing, and I can't say so far a we're seeing, and I can't say so far a we're seeing, and I can't say so far a to what we're seeing, and I can't say so far a to what twe're seeing, and I can't say so far a to what we're seeing, and I can't say so far a to what the we're seeing, and I can't say so far a to what the we're seeing, and I can't say so far a verseeing, and I can't say so far a verseeing, and I can't say so far a verseeing are probably more in line wi what to what the economy to whether they're high now because we're seeing, and I can't say so far a verseeing are probably to what a verseeing are probably to whether they're high now because we're seeing, and I can't say so far a verseing, and I can't say so far a verseing, and I can't say so far a ver			Page 110		Page 112
during the '90s was below 1 percent. I don't know, it might have averaged .7 or .6 percent. During that time period things like household income didn't go up very much. Since 2000 the growth rate has been much. Since 2000 the growth period, and as a rest to whether they're high now because we' come out of a growth period, and as a rest to whether they're high now because we' much. Since 2000 the deans rest. Mathat's the type of risk we kind of say, the general view, if you want to Canada's view. It's a general view of how the economy is doing. Mathat's the way I would characterize those 13	1	A.	During the '90s the economy was—through the	1	a few years was always lower than what
don't know, it might have averaged .7 or .6 percent. During that time period things like household income didn't go up very like household income didn't go up very much. Since 2000 the growth rate has been limproving. You know, there's a bunch of dynamics over this period which are probably noteworthy is once we hit the 2000s, oil started going up in cost, the economy started doing quite well and our sales growth went up quite a lot. You know, that's the way I would characterize those the economy is doing. Late of decades in the most recent decades. The economic forecast as I see forecast goes looks, as far as growth in, let's say, customer income, is worse than of gives me pause when I'm looking forward decades next, you know, four or five years. So, I'm don't know, it might have average is doing I can't say so far as to what we're going to to whether they're high now because we' to whether they're high now because we' to whether they're high now because we' come out of a growth period, and as a rest the economy is turning over, but it is a risk, and that's the type of risk we kind of see in the forecast is the accuracy of, I'll say, the general view, if you want to consider that being the Conference Board Canada's view. It's a general view of how the economy is doing. JOHNSON, Q.C.: Decades in the next five years as far as a fairly sustained period of well above in 2015 in perspective, that's 1 percent or a fairly sustained period of well above forecast goes looks, as far as growth in, MR. HENDERSON: A. Yes, when we say "well above normal", or average is doing quite well. The big turnaround we're seeing is that while next, you know, four or five years. So, I'm don't know hether they're high now because we' the economy is turning over, but it is a risk, and that's the type of risk we kind of see in the economy is turning over, but it is a risk, and that's the type of risk we kind of say, the general view, if you want to 10	2		'90s it was very weak. Our sales growth	2	actually happened. Now the forecasts that
percent. During that time period things like household income didn't go up very much. Since 2000 the growth rate has been the economy is turning over, but it is a miproving. You know, there's a bunch of dynamics over this period which are probably noteworthy is once we hit the 2000s, oil moteworthy is once we hi	3		during the '90s was below 1 percent. I	3	we're seeing are probably more in line with
like household income didn't go up very much. Since 2000 the growth rate has been the economy is turning over, but it is a miproving. You know, the economy is turning over, but it is a miproving. You know kinch are probably moteworthy is once we hit the 2000s, oil moteworthy is once we hit he accuracy of, I'll moteworthy is once we hit he forecast is the accuracy of, I'll moteworthy is once we hit he forecast is the economy is doing. It was a general view, if you want to consider that being the Conference Board Canada's view. It's a general view, if you want to consider that being the Conference Board To accuracy of, I'll Onsaid the forecast is the accuracy of, I'll It was a mit he deconomy is doing. It was a general view, if you want to consider that being the Conference Board To accuracy of, I'll Onsaid the forecast is the accuracy of, I'll Onaccuracy of the conomy is doing. It was a general view of how in	4		don't know, it might have averaged .7 or .6	4	what we're seeing, and I can't say so far as
much. Since 2000 the growth rate has been improving. You know, there's a bunch of dynamics over this period which are probably of dynamics over this period which are probably noteworthy is once we hit the 2000s, oil noteworthy is once we hit the 2000s, oil of say, the general view, if you want to started going up in cost, the economy of started doing quite well and our sales of say, the general view, if you want to consider that being the Conference Board Canada's view. It's a general view of how the economy is doing. 14 JOHNSON, Q.C.: 15 Q. I guess, to put the 1 percent sales growth in 2015 in perspective, that's 1 percent or a fairly sustained period of well above normal growth? 18 normal growth? 19 MR. HENDERSON: 20 What it was through the '90s. So, that kind of gives me pause when I'm looking forward of gives me pause when I'm looki	5		percent. During that time period things	5	to whether they're high now because we've
improving. You know, there's a bunch of dynamics over this period which are probably noteworthy is once we hit the 2000s, oil 10 say, the general view, if you want to 11 started going up in cost, the economy 11 consider that being the Conference Board 12 started doing quite well and our sales 12 Canada's view. It's a general view of how 13 growth went up quite a lot. You know, 13 the economy is doing. 14 that's the way I would characterize those 15 couple of decades in the most recent 16 decades. The economic forecast as I see 16 in 2015 in perspective, that's 1 percent or 17 them over the next five years as far as a 17 a fairly sustained period of well above 18 forecast goes looks, as far as growth in, 19 let's say, customer income, is worse than 20 what it was through the '90s. So, that kind 21 of gives me pause when I'm looking forward 22 as to what we're going to be facing over the 23 housing starts is declining, our average us	6		like household income didn't go up very	6	come out of a growth period, and as a result
dynamics over this period which are probably noteworthy is once we hit the 2000s, oil noteworthy is once we hit the 2000s, oil started going up in cost, the economy started going up in cost, the economy started doing quite well and our sales growth went up quite a lot. You know, that's the way I would characterize those couple of decades in the most recent decades. The economic forecast as I see forecast goes looks, as far as growth in, let's say, customer income, is worse than what it was through the '90s. So, that kind 2 of gives me pause when I'm looking forward 2 as to what we're going to be facing over the next, you know, four or five years. So, I'm say, the general view, if you want to say, the general view, if you want to consider that being the Conference Board Canada's view. It's a general view of how the economy is doing. 14 JOHNSON, Q.C.: 15 Q. I guess, to put the 1 percent sales growth in 2015 in perspective, that's 1 percent or a fairly sustained period of well above normal growth? 18 normal growth? 19 MR. HENDERSON: 20 A. Yes, when we say "well above normal", or average is doing quite well. The big turnaround we're seeing is that while next, you know, four or five years. So, I'm 23 housing starts is declining, our average us	7		much. Since 2000 the growth rate has been	7	the economy is turning over, but it is a

1	had – what they got in cents per kilowatt	1	in price will result in a .2 percent change
2	hour from this past year was more in the	2	in sales over a period that is more in the
3	order of 3/3.5 cents.	3	order of two years. It's not instantaneous
4	GREENE, Q.C.:	4	or in one year, in particular.
5	Q. So again it's based on the opportunity cost	5	GREENE, Q.C.:
6	which will be further studied?	6	Q. I think you've also just recently talked
7	MR. HENDERSON:	7	about this a little bit with Mr. Johnson as
8	A. That's right, and consideration for that	8	to what we can expect going forward. Has
9	marginal cost which Hydro has in it somewhat	9	Newfoundland Power considered what the
10	is, you know, infrastructure cost on the	10	impact will be of the recovery of the
11	island for the transmission grid, those	11	increased supply cost that Newfoundland
12	types of things. So they're going to add to	12	Power, as Mr. Smith has indicated, for
13	the opportunity cost of selling.	13	example, that Muskrat Falls is about 9
14	GREENE, Q.C.:	14	billion in investment, and I believe Mr.
15	Q. And I think you've also indicated that	15	Kelly said that as well in his cross-
16	Newfoundland Power is still in the process	16	examination of Dr. Cleary, the impact of the
17	of reviewing the marginal cost study that	17	recovery of those supply costs on what your
18	was filed by Hydro, is that correct?	18	sales growth would be in the longer term?
19	MR. HENDERSON:	19	MR. HENDERSON:
20	A. That's correct.	20	A. Yeah, the forecast that Ron does and the
21	GREENE, Q.C.:	21	elasticity impacts which do become part of
22	Q. Do you anticipate at this time or is it too	22	conversations with Hydro, both of us are
23	early to say whether that will impact in any	23	modelling elasticity generally speaking in
24	way your current five year plan for CDM	24	that area of .2 to .3 percent and 1 percent
25		25	
	Page 122		Page 124
1	initiatives?	1	price change. In both companies, my
2	MR. HENDERSON:	2	understanding would be that's based on
3	A. It certainly will impact it, right, because	3	historical experience within the variances
4	it's a different set of numbers, so	4	of what we've seen in the past. What we're
5	inevitably it's going to impact it at some	5	going to see in the future is something
6	level. You know, we have a number of	6	dramatically different. Obviously, you know,
7	programs, such as the small technology	7	the future is the future and there's always
8	program, or the instant rebate program, and	8	uncertainties associated with it. Elasticity
9	that's one in which we're forecasting that	9	is certainly one of the elements which
			is certainly one of the elements which
10	to potentially drop off the table given the	10	there's quite a bit of uncertainty around,
10 11	to potentially drop off the table given the reduction in the marginal cost. The actual	l	
1	reduction in the marginal cost. The actual timing of that will certainly be dependent	10	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities
11	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when	10 11	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off
11 12	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these	10 11 12	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities
11 12 13	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact	10 11 12 13	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off
11 12 13 14	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward.	10 11 12 13 14	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times.
11 12 13 14 15 16 17	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.:	10 11 12 13 14 15 16 17	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be
11 12 13 14 15 16	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward.	10 11 12 13 14 15 16 17 18	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times.
11 12 13 14 15 16 17	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.: Q. Okay. Turning now to another topic which was the elasticity impacts, and you had	10 11 12 13 14 15 16 17	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times. GREENE, Q.C.:
11 12 13 14 15 16 17 18	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.: Q. Okay. Turning now to another topic which	10 11 12 13 14 15 16 17 18	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times. GREENE, Q.C.: Q. So you really can't offer an opinion at this
11 12 13 14 15 16 17 18 19	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.: Q. Okay. Turning now to another topic which was the elasticity impacts, and you had	10 11 12 13 14 15 16 17 18 19 20 21	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times. GREENE, Q.C.: Q. So you really can't offer an opinion at this point in time as to what the impact might
11 12 13 14 15 16 17 18 19 20	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.: Q. Okay. Turning now to another topic which was the elasticity impacts, and you had indicated that – was it a .2 percent change	10 11 12 13 14 15 16 17 18 19 20	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times. GREENE, Q.C.: Q. So you really can't offer an opinion at this point in time as to what the impact might be?
11 12 13 14 15 16 17 18 19 20 21 22 23	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.: Q. Okay. Turning now to another topic which was the elasticity impacts, and you had indicated that – was it a .2 percent change in load? MR. HENDERSON: A. That's right. The current forecast	10 11 12 13 14 15 16 17 18 19 20 21	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times. GREENE, Q.C.: Q. So you really can't offer an opinion at this point in time as to what the impact might be? MR. HENDERSON:
11 12 13 14 15 16 17 18 19 20 21 22 23 24	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.: Q. Okay. Turning now to another topic which was the elasticity impacts, and you had indicated that – was it a .2 percent change in load? MR. HENDERSON:	10 11 12 13 14 15 16 17 18 19 20 21 22	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times. GREENE, Q.C.: Q. So you really can't offer an opinion at this point in time as to what the impact might be? MR. HENDERSON: A. That's correct.
11 12 13 14 15 16 17 18 19 20 21 22 23	reduction in the marginal cost. The actual timing of that will certainly be dependent on what the numbers actually look like when we get to that decision point. So these marginal costs as we're getting will impact those types of decisions going forward. GREENE, Q.C.: Q. Okay. Turning now to another topic which was the elasticity impacts, and you had indicated that – was it a .2 percent change in load? MR. HENDERSON: A. That's right. The current forecast	10 11 12 13 14 15 16 17 18 19 20 21 22 23	there's quite a bit of uncertainty around, and, you know, given the change in technology that's going on and opportunities for customers to save money, you know, off their bills, you know, they all constitute a fair bit of uncertainty as to where we'll be in six or seven years times. GREENE, Q.C.: Q. So you really can't offer an opinion at this point in time as to what the impact might be? MR. HENDERSON: A. That's correct. GREENE, Q.C.:

1	que	estions.	1		costs are very small, the higher the load,
2	CHAIRMAN:		2		the lower the price, you know, you got that
3	Q.	Do you have any?	3		dichotomy coming up.
4	KELLY, Q.C.	:	4	CHAIRMAN:	
5	Q.	No re-direct, Mr. Chairman.	5	Q.	And Muskrat Falls is, of course, a high
6	VICE-CHAIR	-	6		fixed cost, isn't it?
7	Q.	No questions that I can see.	7	MR. HENDER	RSON:
8	(12:00 p.m.)	•	8	A.	A huge fixed cost, yeah, and Hydro's
9	CHAIRMAN:		9		reported estimate based on 9 billion dollars
10	Q.	Just a couple of quick questions. So what	10		of investment is, I think, a price somewhere
11	`	you're telling us that I understand that	11		in the order of 19.8 cents, you know, within
12		these customer initiatives, they're not	12		a few years –
13		going to reduce – basically, you don't think	13	CHAIRMAN:	,
14		they're going to reduce peak demand?	14	Q.	Let me stop you there. Now that 9 billion,
15	MR. HENDEI		15		does that include IDC, interest during
16	A.	When you consider mini-splits going into	16		construction?
17		Newfoundland Power service territory which	17	MR. HENDER	
18		has, I don't know, I think it's –	18	A.	Yes.
19		Newfoundland Power itself, I think, is 65	19	CHAIRMAN:	
20		percent electric and everybody else, let's	20		Oh, that's in there now, is it?
21		say. We recognize that this is an advantage	21	MR. HENDER	
22		to everybody, so as a result all customers	22	A.	Yes, basically, the numbers that Hydro – the
23		are liable to be installing it. Those who	23		number of 9 billion dollars you will find in
24		are installing it that currently don't use	24		a footnote to a report that was done by the
25		are instanting it that earrently don't use	25		a roomote to a report that was done by the
1		Page 126	-		Page 128
1			1		C
1 2		electricity for heating may use electricity	1 2		Oversight Committee, so it's not a Hydro
$\begin{vmatrix} 2 \\ 3 \end{vmatrix}$		for heating. Those with baseboard heating	2 3		report per se, it's in the Oversight Committee, and it's in a footnote in which
Ι.		will switch over to this. They may or may	ı		
4		not, in and of itself, get decreases. There	4		in the full document they talk about the
\int_{c}^{5}		certainly might be depending on the quality of the installation and all that stuff we	5		construction cost, which is what Hydro is
6			6		using, which doesn't include IDC. The 9.03,
/		kind of talked about earlier. So as a	7		I think, would include the IDC.
8		result, on average, to me there's certainly	8	CHAIRMAN:	And that's as of111 11
9		risk that it's going to actually increase	9	•	And that's as of – well, whenever that was
10		peak even though it's reducing – well, I'm	10		produced?
11		not sure what the energy is, I'd have to	11	MR. HENDER	
12		think about it more, but, yeah, there's risk	12		It was last fall, I think.
13		that this technology coming to the market is	13	CHAIRMAN:	I4 C.110
14		not necessarily going to do anything to	14	`	Last fall?
15	CIIAIDAGAAA	reduce peak.	15	MR. HENDER	
16	CHAIRMAN		16		Yeah.
17	Q.	So basically what we're saying is that the	17	CHAIRMAN:	A 14
18		collective cost, the fixed cost, which are	18	-	And they're two years behind – do you know
19		rising apparently considerably, are not	19		how far they're behind schedule, is there
20		going to – it's not going to be impacted at	20		any public information on that?
21		all by these improved efficiencies in energy	21	MR. HENDER	
22	. m	delivery?	22		I haven't actually studied the most current
23	MR. HENDE		23		information. All I would be aware of is
24	A.	If there's a lot of fixed costs, and the	24		that there's pressure in particular on the

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A. CHAIRMAN: Q.	RSON: I don't know, but, anyway, we don't have any particular information to suggest anything. We have this financing program out there. I suspect the fellows who are quite wealthy will be able to get a better financing rate somewhere else. For those people who have less ability to purchase these things, they may want to take advantage of it because it might represent a better way for them to pay for it, it's on their bill, you know, it's amortized over five years and it might make it work for them because presumably they'll get some offsetting energy savings to do it. We are offering it out there, so as it would enable a broader group of participation in the getting these things in place. Do you have any information, any studies done on, as costs increase on ability to pay? Like it seems to me that the forgotten consumer in this whole thing are the people at the bottom end of the income scale, the	1 2 3 4 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A. Well these heat pumps at that point in time might get down to, if prices go as high as Hydro is estimating to be, you know, the payback on that will be within five years, so you might have a chance for that. But there's no question — CHAIRMAN: Q. I like him. KELLY, Q.C.: Q. You asked the question, Mr. Chairman. CHAIRMAN: Q. Mr. Kelly, I like condor. MR. HENDERSON: A. Anyway, there's absolutely no question the one of the big challenges to the price increases that are going to be seen is that the economy is doing poor, the support for low income people who this is a real affordability issue is a major concern and, you know, I don't know what the solution will be for that, but I guess it's going to, depending on how it turns out, it's going to be a real matter for the politicians and	nat or ss
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A. CHAIRMAN: Q.	RSON: I don't know, but, anyway, we don't have any particular information to suggest anything. We have this financing program out there. I suspect the fellows who are quite wealthy will be able to get a better financing rate somewhere else. For those people who have less ability to purchase these things, they may want to take advantage of it because it might represent a better way for them to pay for it, it's on their bill, you know, it's amortized over five years and it might make it work for them because presumably they'll get some offsetting energy savings to do it. We are offering it out there, so as it would enable a broader group of participation in the getting these things in place. Do you have any information, any studies done on, as costs increase on ability to pay? Like it seems to me that the forgotten consumer in this whole thing are the people	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A. 10 KELLY, Q.C.:

15 CHAIRMAN:

Q.

Q.

0.

0.

KELLY, Q.C.:

CHAIRMAN:

21 (12:08 p.m.)

KELLY, Q.C.: 6 Q. 2.9 and 5.4, Mr. Chairman.

8 CHAIRMAN:

5

9 2.9 and 5.4, so that's, you know, you're Q. 10 closing in on a 9 percent decline in your GDP. I mean, that's -11

and 2.4 I think it was in two years?

12 MR. HENDERSON:

13 A. And I always have a hard time with GDP just 14 because it's so caught up in the export of 15 materials and the influence that has on us, 16 if it's not affecting the salary levels

17 coming in for the people who are actually 18 doing the work -

19 CHAIRMAN:

20 Q. So do you think GDP is overestimated?

21 MR. HENDERSON:

22 No, it's just interpreting the effect that A. 23 the GDP may have on the economy, you know, I 24 equate the GDP more for, especially in the 25

resource industry, more in the area of

Page 134 Page 136

Adjourned.

the response.

royalties. 1

CHAIRMAN:

3 Uh-hm. 0.

4 MR. HENDERSON:

5 With respect to the impact on Newfoundland A. 6 Power, we're most concerned about the 7 household disposable income and the service 8 sector GDP, which often, you know, aren't 9 quite as cyclical or dramatically variant as 10 the GDP will be with the resources sector 11 that we have

CHAIRMAN: 12

13 So would you consider, for instance, the Q. 14 growth in government presence in the 15 economy, would you consider that to be an addition to GDP or -16

MR. HENDERSON: 17

18 A. I'd say you're starting to get beyond what I 19 can really comment on with regard to GDP and 20 its influence on, you know, I'll say the 21 macro economic level.

22 CHAIRMAN:

23 Thank you, sir. So I guess that is it, is 0. 24 it? We have exhausted the agenda. 25 JOHNSON, Q.C.:

CERTIFICATE

that I would put something very specific to

that and I'll provide the Board with what I

provide them and they will provide me an

answer to the specific question.

I'm assuming it's a matter of how

Newfoundland Power and I'm committed to do

Newfoundland Power does the calculation and

we'll get the question and then determine

We find Newfoundland Power reliable.

Thank you, Mr. Chairman.

I, Judy Moss, do hereby certify that the foregoing is a true and correct transcript of a hearing in the matter of a General Rate Application by Newfoundland Power Inc. to establish customer electricity rates for 2016 and 2017 heard on the 12th day of April, 2016 at the Public Utilities Commission office, St. John's, Newfoundland and Labrador and was transcribed by me to the best of my ability by means of a sound apparatus.

Dated at St. John's, NL this 12th day of April, 2016

Judy Moss
