4 Undertake to advise any analysis of total cost of recall power vs power over the Maritime
5 Link.

6

7

8 **Undertaking Response**

9 Hydro did not conduct analysis of the total cost of recall power versus power over the
10 Maritime Link (ML) given the difference in cost of the two sources (i.e. recapture energy at
11 0.2 cents/kWh versus ML imports assumed at 90% of No. 6 fuel purchases). Further, the
12 use of the Labrador Island Link (LIL) in advance of full commissioning of the Muskrat Falls
13 Generating Station (MFGS) allows for two years of the LIL operation in advance of first
14 power from Muskrat Falls. This stepped approach in the full commissioning of the Lower
15 Churchill Project assets will help ensure that the LIL is reliable before the commissioning of
16 the MFGS begins.
