1	Q.	Please provide a table showing the average rates for each of Hydro's customer
2		classes for each of the past 5 years, and forecast for 2018, 2019 and 2020.
3		
4		
5	A.	The requested 5 year history of average rates and the forecast average rates for
6		2018 and 2019 reflecting Hydro's 2017 General Rate Application proposals is
7		provided in Table 1. There is currently too much uncertainty to estimate what
8		average customer rates will be in 2020. The historical average rates provided in
9		Table 1 are computed based on estimates of average monthly usage applied to July
10		1 rates each year.
11		
12		The information provided in Table 1 differs from the information provided in
13		Hydro's response to CA-NLH-002, which provides historical average unit revenues
14		(total class revenues divided by unit sales).
15		
16		(rest of page intentionally left blank)

¹ Forecast average rates assume approval of Hydro's 2017 GRA as filed, flow-through of the Newfoundland Power wholesale rate change at 67.5% to retail customers, average customer use by class, excluding HST and the Northern Strategic Plan.

² The Island Interconnected Domestic rates provided in Table 1 differ from those provided in response to CA-NLH-002, which computes average rates as total class revenues divided by unit sales. The data in Table 1 for historical years is calculated using average monthly consumption applied to customer rates as of July 1st.
