

1 Q. Further to response to Request for Information IOC-NLH-006:

2

3 Please provide the legislative, contractual or any other basis for electricity
4 requirements on the Labrador Interconnected System having first priority in the use
5 of Recapture Energy.

6

7

8 A. The prioritization of use of Recapture Energy by the Labrador Interconnected
9 System is based on the power policy set out in section 3 of the *Electrical Power*
10 *Control Act, 1994*, SNL 1994, Chapter E-5.1, which directs delivery of power to
11 consumers in the province at the lowest possible cost consistent with reliable
12 service. In Labrador, the energy that is the lowest possible cost is Recapture Energy,
13 and therefore it is this energy that is used to supply customers.
