5

6 A. A preliminary study report was not generated as part of this exercise. Rather, results of the
7 study were discussed in a conference call in October 2018. The call was held with Hydro-
8 Québec TransÉnergie’s regional transmission planning team and commercial
9 representatives. The discussion included preliminary confirmation of the technical viability
10 of the proposed interconnection. The discussion also included a review of the commercial
11 and technical processes required to pursue such an interconnection, as discussed in the
12 “Labrador Interconnected System Transmission Expansion Study,” Sec. 7.2.1.
