

1 Q. **Reference: Labrador Interconnected System Network Additions Policy, Summary Report,**
2 **Page 4, Line 14 to Page 5, Line 2.**

3

4 Will Hydro charge an Upstream Capacity Charge for existing customers who increase their
5 demand by more than 200 kW without submitting a supply demand request? If yes, please
6 specify which sections of the proposed Network Additions Policy give effect to the
7 application of the Upstream Capacity Charge to existing customers.

8

9

10 A. No. The “Network Additions Policy – Labrador Interconnected System” will be used to
11 determine the customer contributions in responding to applications for service. An
12 application for service can be a new service request or an existing customer requesting to
13 upgrade the existing service.

14

15 However, Newfoundland and Labrador Hydro has also proposed a review process to ensure
16 the estimated demand requirements provided by the customer for computing the
17 Upstream Capacity Charges are reasonable. The review process provides for the
18 recalculation of the charge if the customer’s demand requirements indicate a material
19 understatement.
