

- 1 **Q. Reference Prefiled Evidence of Larry Brockman: Can the LTA be used to import**
2 **(export) energy or capacity from (to) North American electricity markets?**
3
- 4 A. It is Mr. Brockman's understanding that the LIL and LTA will be used predominantly to
5 supply electricity from the Muskrat Falls generating facility to customers on the Island
6 Interconnected system as well as to export electricity to North American electricity
7 markets, particularly to customers in Nova Scotia.
8
- 9 It is Mr. Brockman's understanding that using the LIL and LTA to import electricity is
10 possible, subject to the requirements of the Muskrat Falls Project first being met.
11 However, Hydro's evidence does not seem to indicate this as a predominant use of these
12 facilities, nor does it indicate it to be a reason for the decision to proceed with the
13 Muskrat Falls Project.
