

1 Q. **Reference: Project - Upgrade Waste Water Equalization System - Holyrood**

2 Please explain in detail how safety concerns (mold, corrosion) have been addressed or
3 mitigated, since at least 2014 (when Hydro states this project was first contemplated), when
4 Hydro or other personnel are required to enter the facility?

5

6

7 A. Safety concerns have primarily been mitigated by use of PPE.¹ Employees have been donning
8 the respirators required for safe entry as determined from the mold assessments completed in
9 2011, 2013, and 2016. Additionally, Newfoundland and Labrador Hydro limits entry into the
10 building to those who are required to be there for a specific purpose (e.g., collecting samples)
11 and also requires PPE including hardhats, safety glasses, and steel toe boots for entry into the
12 building.

¹ Personal Protective Equipment (“PPE”).
