

1 **Q. Reference: Application, Schedule 1, page 9.**

2 On page 9 of Schedule 1, Attachment 1, Hydro states:

3 “As the non-firm customers would use the transmission system, Hydro believes
4 it would be appropriate for the customers to pay a transmission demand charge
5 based on the average embedded cost of demand.”

6 While it was later determined that the inclusion of a per kW demand charge in non-firm pricing
7 was not typical in other jurisdictions, could Hydro consider charging for the use of the
8 transmission system through a per kWh charge? If not, why not?
