Board of Commissions of Public Utilities
120 Torbay Road, P.O. Box 2140
St. John's, NL A1A 5B2

**Attention: G. Cheryl Blundon, Director of
Corporate Services / Board Secretary**

Dear Ms. Blundon:

RE: Newfoundland Power's 2022-2023 General Rate Application

Further to the above-captioned, enclosed please find enclosed the original and nine (9) copies of the Consumer Advocate's Requests for Information CA-NP-001 to CA-NP-175.

A copy of this letter, together with enclosure, has been forwarded directly to the parties listed below.

If you have any questions regarding the enclosed, please contact the undersigned at your convenience.

Yours truly,

Dennis Browne, Q.C.

/jm
Enclosure

IN THE MATTER OF the *Electrical Power Control Act*, 1994 SNL 1994, Chapter E-5.1 (the “*EPCA*”) and the *Public Utilities Act*, RSNL 1990, Chapter P-47 (the “*Act*”), as amended, and regulations thereunder; and

IN THE MATTER OF a general rate application by Newfoundland Power Inc. to establish customer electricity rates for 2022 and 2023.

**CONSUMER ADVOCATE
REQUESTS FOR INFORMATION
CA-NP-001 – CA-NP-175**

Issued: August 2, 2021

1 **Historical Data**

2 CA-NP-001 (Application Volume 1, page 4-1) Provide a table showing
3 regulated rate base, revenue requirement, capital budget
4 proposed, capital budget approved, actual capital budget
5 expenditures, and year-over-year rate change for each of the
6 last 20 years and forecast for the years 2021 through 2026.
7 Exclude purchased power costs.
8

9 **Revenue Requirement and Load Forecast**

10 CA-NP-002 Newfoundland Power (NP) is requesting a 0.8% increase in
11 rates effective March 2022. From the discussion at page 1-8 it
12 appears that the main driver of this increase is the requested
13 9.80% ROE, can the company confirm that if the ROE is not
14 changed there would be a decrease in rates?
15

16 CA-NP-003 In terms of the proposed rate 1.1 electricity charge of 12.298
17 cents per KWH with a \$16.1 monthly minimum can the
18 company provide the equivalent rates in 2015 when the HST
19 was 13% (Schedule A)? Please provide a typical residential bill
20 with the 2015 and the proposed rates inclusive of HST for 2022.
21

22 CA-NP-004 (Application Volume 1, Table 4-1) Table 4-1 shows the
23 proposed revenue requirement for 2022 and 2023. Describe
24 the demand and supply scenario upon which these calculations
25 are based and explain how this scenario accurately portrays
26 NP's understanding of the demand and supply scenario in the
27 Province's electricity sector in those years.
28

29 CA-NP-005 (Application Volume 1, page 1-2) It is stated "*Newfoundland
30 Power's long-term growth outlook is uncertain. This
31 uncertainty reflects a weak economic outlook for the province
32 and potential increases in the cost of electricity following the
33 commissioning of Nalcor Energy's Muskrat Falls Project.*"

34 a) When is the Muskrat Falls Project expected to be
35 commissioned and when are its costs expected to be
36 reflected in NP's purchase power rate?

37 b) Explain how the Muskrat Falls Project has impacted
38 NP's planning and its forecasts of load and costs in the
39 test years 2022 and 2023.

40 c) Does NP not have an excellent record of forecast
41 accuracy for its energy sales, as demonstrated in
42 Appendix D of its Customer, Energy and Demand
43 Forecast in Volume 2?

1 d) Is growth necessary for NP to achieve its approved
 2 return on rate base or its approved ROE?
 3

4 CA-NP-006

(Hydro's June 30, 2021 submission to the Board titled
 5 *Quarterly Update – Items Impacting the Delay of Hydro's Next*
 6 *General Rate Application*) It is stated (page 2) "*It is currently*
 7 *projected that Hydro will be required to begin payments under*
 8 *the Muskrat Falls PPA on October 1, 2021, in advance of the*
 9 *commissioning of the Labrador-Island Link (currently*
 10 *scheduled for November 14, 2021). Hydro is required to make*
 11 *payments under the Transmission Funding Agreement one day*
 12 *after full Project commissioning, currently projected to be*
 13 *November 15, 2021."* Hydro goes on to say "*To address the*
 14 *cost impact that may materialize as a result of these*
 15 *contractual requirements, Hydro intends to file an application*
 16 *in the third quarter of 2021 to revise its supply cost deferral*
 17 *accounts to allow for the transfer of cost variances associated*
 18 *with the commissioning of the Muskrat Falls Project assets that*
 19 *may occur on a go-forward basis. The deferral account*
 20 *revisions are intended to address the potential for Hydro to*
 21 *incur financial losses during this transition period."* Please
 22 explain how the revenue requirement and cost of service study
 23 in the 2022-2023 GRA is "*informed by the most detailed,*
 24 *complete and current information available"* (from January 15,
 25 2018 letter from NP to the Board entitled *Newfoundland and*
 26 *Labrador Hydro ("Hydro") – 2017 General Rate Application*
 27 *(the "2017 GRA"): Consumer Advocate Application to Delay*
 28 *Proceeding (the "Application")*, page 5 of 5).
 29

30 CA-NP-007

(Hydro's June 30, 2021 submission to the Board titled
 31 *Quarterly Update – Items Impacting the Delay of Hydro's Next*
 32 *General Rate Application*) It is stated (page 2) "*As the*
 33 *financial restructuring of the Muskrat Falls PPA and*
 34 *Government's rate mitigation plan are ongoing and the*
 35 *necessary information to inform the filing of a complete GRA*
 36 *is not yet available, Hydro believes there is material*
 37 *uncertainty with respect to its ability to file its next GRA in*
 38 *October 2021. Hydro is cognizant of the regulatory*
 39 *inefficiencies which may result should a complete package of*
 40 *information not be available to the Board and parties. Hydro*
 41 *will provide an update to the Board and parties as soon as new*
 42 *information is available."* NP states "*It appears that*
 43 *Newfoundland Power's customers will ultimately bear a*

1 significant portion of the costs associated with the Muskrat
 2 Falls project in the rates they must pay” (see January 15, 2018
 3 letter from NP to the Board entitled *Newfoundland and*
 4 *Labrador Hydro (“Hydro”) – 2017 General Rate Application*
 5 *(the “2017 GRA”): Consumer Advocate Application to Delay*
 6 *Proceeding (the “Application”)*, page 5 of 5). Given the
 7 uncertainty with respect to the Muskrat Falls Project and the
 8 significant impact it could have on the rates of NP’s customers
 9 in 2022 and 2023, and given the high risk of regulatory
 10 inefficiency, why did NP file its GRA now rather than request
 11 a deferral like Hydro?
 12

13 CA-NP-008

(Application Volume 1, page 1-6) It is stated “*The Board determined that, even if all recommended sources of rate mitigation are implemented, customer rates are still forecast to increase by approximately 50%.*”

- 17 a) What is the expected impact of a 50% rate increase on
 18 NP’s load in 2022 and 2023 if the rate increase occurs
 19 by year-end 2021?
 20 b) What is the expected impact on NP’s costs and revenue
 21 requirement in 2022 and 2023 if rates increase 50% by
 22 year-end 2021?
 23 c) What NP assets are likely to become stranded if rates
 24 increase by 50%?
 25

26 CA-NP-009

(Application Volume 1, page 3-5) It is stated “*Power supply costs are expected to increase by approximately \$14.7 million from 2019 to 2023. This is largely attributable to an increase in Hydro’s Utility Rate, partially offset by declining energy sales.*” What wholesale power rates are reflected in this calculation and what is assumed with respect to Muskrat Falls and rate mitigation?
 32
 33

34 CA-NP-010

(Application Volume 1, page 5-9) It is stated “*The Company’s future embedded and marginal costs cannot reasonably be determined until the Muskrat Falls Project is commissioned.*”

- 37 a) Explain how Muskrat Falls impacts NP’s embedded
 38 costs and marginal cost of energy.
 39 b) Given that: 1) it is not possible to “reasonably”
 40 determine the Company’s future embedded costs,
 41 2) NP’s GRA is based on costs for 2022 and 2023, and
 42 3) Muskrat Falls costs are expected to be introduced in
 43 rates later in 2021, is it fair to say that the revenue

- 1 requirements in Table 4-1 and the cost of service study
 2 included in Volume 2 are not “*informed by the most*
 3 *detailed, complete and current information available?*”
- 4 c) Should NP withdraw its 2022-2023 General Rate
 5 Application until there is clarity on what its costs will
 6 be in 2022 and 2023? If not, why not?
 7
- 8 CA-NP-011 (Application Volume 1, Exhibit 5) It is stated “*Purchased*
 9 *power expense reflects Newfoundland & Labrador Hydro's*
 10 *rates approved by the Board effective October 1, 2019 and the*
 11 *Customer, Energy and Demand Forecast dated May 12, 2021.*”
- 12 a) Is this the “*most detailed, complete and current*
 13 *information available*” for the 2022 and 2023 test years?
 14 Please explain.
- 15 b) It is noted that the ratings agencies both mention rate
 16 shock from Muskrat Falls as a risk. Does NP agree?
 17 Please explain how Muskrat Falls risks are reflected in
 18 the GRA.
- 19 c) Does NP expect the Board to render a Decision on the
 20 2022-2023 GRA when it is not informed by the “*most*
 21 *detailed, complete and current information available*”
 22 knowing full well that the revenue requirement
 23 calculation does not reflect expected costs?
 24
- 25 CA-NP-012 (Application Volume 2, Customer, Energy and Demand
 26 Forecast, May 2021) Does the load forecast ignore any impact
 27 that the introduction of Muskrat Falls costs might have on
 28 costs, rates and via elasticity effects, load? Can allocations in
 29 the cost of service study be considered fair given that a number
 30 of allocators relate to customer class consumption?
 31
- 32 CA-NP-013 (Application Volume 1, page 1-2) It is stated “*The forecast*
 33 *decline in energy sales also reflects the penetration of heat*
 34 *pumps among the Company's customers.*”
- 35 a) Specifically, what impact has this had on capacity and
 36 energy demand forecast in the GRA?
- 37 b) Is Hydro in agreement?
- 38 c) It is understood that there is a variation of about 55 MW
 39 between Hydro and NP forecasts of NP load. Please
 40 confirm or correct this information.
- 41 d) Provide a comparison of NP and Hydro forecasts of NP
 42 load in the 2022 and 2023 test years.

- 1 e) What is being done to resolve the difference between
2 Hydro and NP forecasts of NP load?
3 f) Who is ultimately responsible for forecasting load in the
4 Province?
5
- 6 CA-NP-014 (Application Volume 1) How realistic are costs included in the
7 revenue requirement and the cost of service study when NP and
8 Hydro forecasts of NP load vary significantly?
9
- 10 CA-NP-015 (Application Volume 1) What rate increase would NP be
11 requesting in this GRA if it were to base its costs on the Hydro
12 forecast of NP load?
13
- 14 CA-NP-016 (Application Volume 1, page 1-9) It is stated "*The third
15 change relates to the recovery of wholesale supply costs from
16 forecast energy sales. A general rate application requires
17 forecast supply costs to be reconciled with forecast revenue
18 from energy sales during the test period. Rebalancing 2022
19 and 2023 supply costs and revenue from energy sales results
20 in a 2.7% decrease in the revenue required from customer
21 rates.*"
22 a) Does this rate decrease have anything to do with actions
23 taken by NP? More specifically, is NP taking credit for
24 this rate decrease?
25 b) If the same load forecast used in the 2019-2020 GRA
26 were used in this GRA what rate increase would NP be
27 proposing?
28 c) If it turns out that NP's load in 2022 and 2023 are
29 similar to load used in the 2019-2020 GRA, how and
30 when would NP's increased costs be passed on to
31 customers?
32
- 33 CA-NP-017 (Application Volume 1, page 5-1) It is stated "*Demand is
34 forecast to increase by 3.9% in 2021, remain steady in 2022,
35 and decrease by 0.7% in 2023.*" What is driving the increase
36 in demand in 2021 when no increase is forecast in 2022 and a
37 0.7% reduction is forecast in 2023?
38 **Business Risk**
- 39 CA-NP-018 Please confirm that Newfoundland Power (NP) is requesting a
40 rate increase for the 2022 and 2023 test years and that all risk
41 assessments are based on NP's risk during these test years.

- 1 CA-NP-019 Given that it has been the consistent judgment of the Board that
 2 NP is an average risk Canadian utility and that the company
 3 judges that its risks have not materially changed since 2018
 4 (page 1-8), is it fair to say that the company remains an average
 5 risk Canadian utility? If not please explain why this risk
 6 assessment might have recently changed?
 7
- 8 CA-NP-020 In Table 2-7, transmission costs are forecast to increase while
 9 distribution costs decrease. Please explain why this is
 10 happening and if the company regards transmission as more or
 11 less risky than distribution.
 12
- 13 CA-NP-021 At pages 2-17 to 2-31, it appears that despite the rugged terrain
 14 Newfoundland Power's system has proven very reliable in the
 15 face of increased significant events. Can NP confirm this
 16 judgement and compare its system over the period 2010-2020
 17 with that of Nova Scotia Power and Maritime Electric on the
 18 basis of the age of the plant and equipment in its system, for
 19 example, using net to gross plant in service or any other metric
 20 the company judges to be more useful.
 21
- 22 CA-NP-022 (Application Volume 1, page 1-8) It is stated *The Company's*
 23 *business risks have not materially changed since 2018.* and
 24 *Newfoundland Power's business risks also continue to be*
 25 *defined by longstanding factors.* Why then is NP seeking a
 26 substantial increase in its ROE despite no change in its business
 27 risks?
 28
- 29 CA-NP-023 (Application Volume 1, page 3-23) It is stated *The principal*
 30 *risks to which Newfoundland Power is exposed have not*
 31 *changed materially since 2018.*
 32 a) Is it accurate to say that the impacts of these risks would
 33 manifest themselves largely through changes in the
 34 volume of NP's sales?
 35 b) If NP's volume of sales fell substantially below its
 36 forecast, what recourse, if any, would it have to recover
 37 any consequent reductions in earnings?
 38
- 39 CA-NP-024 (Application Volume 1, page 3-24) With respect to forecast
 40 housing starts during 2021-2025:
 41 a) What proportion of these starts does NP estimate will be
 42 in its service territory?

1 b) When completed, what proportion of these housing
 2 starts does NP estimate will use electricity as their
 3 primary heat source?
 4

5 CA-NP-025

(Application Volume 1, page 3-25 and page 3-29) It is stated
 6 on page 3-25: *The weak economic outlook for Newfoundland*
 7 *and Labrador presents risks to Newfoundland Power's ability*
 8 *to recover its investment in long-life utility assets and earn a*
 9 *fair return.* and on page 3-29: *These demographic conditions*
 10 *can be expected to exert pressure on the provincial economy,*
 11 *government service delivery and Newfoundland Power's*
 12 *ability to recover its investment in long-life utility assets.*

13 a) How is NP's ability to recover its investments in these
 14 long-life utility assets at risk when the Public Utilities
 15 Act states that a public utility is entitled to earn a just
 16 and reasonable return on rate base?

17 b) If NP believes recovery of its investments in long-life
 18 assets are at risk then what risk mitigating strategies has
 19 it considered? In particular, has it considered reducing
 20 capital expenditures and prolonging the life of existing
 21 assets through enhanced maintenance? What actual risk
 22 mitigating actions has it taken since 2018 and what
 23 actions does it plan to take in 2021, 2022 and 2023?

24 c) Please provide a table showing NP's rate base expressed
 25 in constant dollars, FTE employees, and the ratio of the
 26 rate base to the number of FTE expressed in terms of
 27 thousands of dollars per employee for the years 1996 to
 28 2021.
 29

30 CA-NP-026

(Application Volume 1, page 3-34 and page 3-25) It is stated
 31 *Reliability of supply from the Muskrat Falls Project affects*
 32 *NP's business risk from 2 perspectives. First, an outage to the*
 33 *LIL during the winter season could result in a shortfall of up*
 34 *to approximately 400 MW on the Island Interconnected*
 35 *System. This could result in large-scale customer outages over*
 36 *a prolonged period of time. Such a scenario would impede*
 37 *NP's ability to provide adequate service and pose serious*
 38 *health and safety risks to the Company's customers. Under*
 39 *this scenario, Newfoundland Power could be expected to incur*
 40 *additional costs to continue serving its customers with*
 41 *available electricity supply. Second, inadequate supply*
 42 *reliability could result in the need for additional investments to*
 43 *improve reliability, including investments in additional*

1 *sources of supply or investments to improve the reliability of*
 2 *the LIL. Such investments could be expected to contribute to*
 3 *higher customer rates.*

- 4 a) With respect to the first business risk, if NP had to incur
 5 *additional costs* then what recourse, if any, would it
 6 have to recover those additional costs, or would it have
 7 to absorb them?
- 8 b) (i) With respect to the second business risk, please
 9 clarify whether the *additional investment* would
 10 be undertaken by NP or Hydro.
- 11 (ii) If any additional investment were undertaken by
 12 NP, would it not be entitled to a just and
 13 reasonable return on such investment?
- 14 (iii) To the extent that higher customer rates result
 15 then aren't they borne by the customers, not NP?
 16

17 **Electrification Program**

18 CA-NP-027 (Application Volume 1, pages 2-10 and 2-11) It is stated
 19 "*Customer CDM and electrification programs are*
 20 *complementary. As customers' energy usage increases*
 21 *through electrification, it becomes increasingly important to*
 22 *manage impacts on system peak and related system costs*
 23 *through CDM. Both CDM and electrification programs result*
 24 *in lower overall costs for customers."*

- 25 a) Please confirm that NP's electrification program has not
 26 yet received Board approval.
- 27 b) If Board approval is not granted until August 2021 will
 28 NP's proposed electrification program be delayed? At
 29 what point will NP be forced to make schedule changes
 30 to its proposed electrification program that would
 31 impact costs included in the GRA and 2022 Capital
 32 Budget Application?
- 33 c) If the Board does not allow charging station costs in
 34 regulated rate base how will this affect the revenue
 35 requirement and rate increase proposed in the GRA?
- 36 d) If the Board does not allow cost recovery of charging
 37 station costs in a deferral account how will this affect
 38 the revenue requirement and rate increase proposed in
 39 the GRA?
- 40 e) Given that the proposed electrification program
 41 increases peak demand, does it also increase reliability
 42 risk and NP's ability to provide reliable service at
 43 lowest cost assuming CDM programs make the same

1 contribution to peak demand reduction with or without
 2 the proposed electrification program? Please explain.

3
 4 CA-NP-028

(Application Volume 1, page 2-11) It is stated *Electrification programs include incentives for residential and commercial customers to purchase an electric vehicle and associated charger*. Does NP currently offer such incentives? If so, or if it will do so in the near future, then what is the specific incentive available to purchase an electric vehicle and what is the specific incentive available to purchase a charger?

11
 12 CA-NP-029

(Application Volume 1, page 2-12) It is stated “*Electrification programs will provide a rate mitigating benefit for Newfoundland Power’s customers over the long term. For example, increased net revenue through electrification will provide a rate mitigating benefit for the Company’s customers of approximately 0.5¢/kWh by 2034.*”

- 18 a) What customer rates were assumed in this analysis?
 19 Are these the same rates assumed in the GRA?
- 20 b) Are the costs of electric vehicles expected to be on par
 21 with gasoline vehicles by 2025?
- 22 c) Is the proposed treatment of charging station costs
 23 consistent with treatment of CDM costs?
 - 24 i) Are any of NP’s costs for CDM programs
 25 included in rate base?
 - 26 ii) Does NP recover the costs of incentives for CDM
 27 programs such as low interest loans, rebates, etc.
 28 in a deferral account?
 - 29 iii) Has NP ever built, owned and operated any
 30 CDM facilities?
- 31 d) How much is the estimated rate mitigating benefit by
 32 the end of 2030?
- 33 e) Is there any risk that the projected benefit could be less
 34 than 0.5¢/kWh or even negative? Please identify any
 35 such risks.
- 36 f) If residential or commercial customers install EV
 37 chargers then would they have to upgrade their
 38 electrical panels or connections? Is the cost of such
 39 upgrades and the cost, net of incentives, of the chargers
 40 included in the calculation of the rate mitigating benefit
 41 to customers?

- 1 g) Would CDM programs that lead to reduced electricity
 2 consumption more than offset the 0.5¢/kWh rate
 3 mitigating benefit?
 4
- 5 CA-NP-030 (Application Volume 1, Table 2-2, page 2-12) Do these figures
 6 incorporate any impacts stemming from NP charging station
 7 infrastructure?
 8
- 9 CA-NP-031 (Application Volume 1, Table 2-3, page 2-12) How much of
 10 the program costs is NP proposing to put in rate base and how
 11 much is NP proposing to recover in a deferral account?
 12
- 13 CA-NP-032 (Application Volume 1, page 2-13) Do the Customer
 14 Electrification Costs given in Table 2-3 include the costs of
 15 NP's proposed EV charging network project that was included
 16 in its 2022 Capital Budget Application?
 17
- 18 CA-NP-033 (Application Volume 1, pages 2-15 and 2-16) The cumulative
 19 energy saving from CDM over 2021 to 2025 is given as 1,279
 20 GWh at an average program cost of approximately \$7.5 million
 21 annually over that time period.
 22 a) Do participating customers bear any additional costs? If
 23 so, please identify.
 24 b) Why spend an average of \$3.6 million annually (page 2-
 25 13) from 2021 to 2025 to encourage electrification and
 26 simultaneously spend an average of \$7.5 million
 27 annually on programs that lead to reduced electricity
 28 consumption?
 29 c) Shouldn't CDM programs be focused solely on
 30 reducing growth in system peak? Please identify and
 31 explain which of the proposed CDM programs for 2021-
 32 2025 are exclusively or primarily designed to reduce
 33 system peak. Also, show the cost of each.
 34
- 35 CA-NP-034 (Application Volume 1, page 3-57) Table 3-20 shows
 36 electrification costs increasing from \$1.336 million in 2021 to
 37 \$4.385 million in 2025.
 38 a) Provide a breakdown of these costs by program.
 39 b) Are these all of the electrification costs proposed by
 40 NP? If not, identify the additional costs and how NP
 41 proposes to recover the costs from customers.
 42 c) What is the estimated impact of the proposed
 43 electrification program on regulated revenue

1 requirement and rates in the 2022 and 2023 test years,
 2 and forecast in 2024 and 2025? Identify any rate
 3 mitigation that has been incorporated in the calculation.

- 4 d) Provide a table for NP and Hydro showing the costs of
 5 proposed electrification programs, the method of cost
 6 recovery and the estimated impact on rates for the
 7 period 2021 through 2025.

8
 9 CA-NP-035

(Application Volume 2, Electrification, Conservation and
 10 Demand Management Plan 2021-2025) It is stated (page 3)
 11 “based on a residential retail rate of 13.5¢/kWh and an export
 12 sales value of 4.2¢/kWh, each additional kWh consumed
 13 domestically will provide a benefit of 9.3¢.”

- 14 a) What is the basis for assuming a residential retail rate of
 15 13.5 cents/kWh?
 16 b) What is the basis for assuming an export sales value of
 17 4.2 cents/kWh? How does this compare to Nalcor
 18 Energy export sales prices in recent history? Does this
 19 figure incorporate transmission costs? If so, please
 20 provide the transmission costs. If not, why not?
 21 c) From whose perspective is this benefit derived? If the
 22 Government provides rate mitigation bringing rates
 23 down to 13.5 cents/kWh post Muskrat Falls
 24 commissioning, who benefits from electrification,
 25 Government or consumers?
 26

27 CA-NP-036

(Application Volume 2, Electrification, Conservation and
 28 Demand Management Plan 2021-2025, page 3) The quote
 29 from the Board’s February 2020 rate mitigation report includes
 30 the following sentence: *Appropriate electrification programs*
 31 *should be pursued Government and the utilities, taking into*
 32 *account the impact such programs can have on Island*
 33 *Interconnected system peak through CDM programs.*

- 34 a) In light of that statement, why does NP expect the Board
 35 to approve CDM programs that substantially reduce
 36 electricity consumption while providing only a modest
 37 reduction in system peak by 2025?
 38 b) It is also stated on page 3 in reference to the use of
 39 surplus electricity arising from Muskrat Falls that *each*
 40 *additional kWh consumed domestically will provide a*
 41 *benefit of 9.3¢.* How does that benefit compare to the
 42 benefit per kWh arising from reduced electricity

1 consumption due to NP's CDM programs for 2021 to
2 2025?

3
4 CA-NP-037 (Application Volume 2, Electrification, Conservation and
5 Demand Management Plan 2021-2025, page 20) In Table 4,
6 the cumulative energy reduction over 2021 to 2025 due to
7 CDM programs is given as 1,609.7 GWh. Please explain the
8 difference between this figure and the figure of 1,279 GWh
9 given on page 2-15 of Volume 1.

10
11 **Rates and Customer Service**

12 CA-NP-038 (Application Volume 1, page 3-59) It is stated "*Implementation*
13 *of customer rates beginning on March 1, 2022 based on the*
14 *proposed 2023 revenue requirement would result in a*
15 *\$1,262,000 shortfall in recovering the proposed 2022 revenue*
16 *requirement.*" Please provide this calculation.

17
18 CA-NP-039 (Application Volume 1, Schedule A, page 2 of 2) What is the
19 basis for the 1.297 cents/kWh discount for the optional
20 domestic seasonal rate? Does this reflect pre- or post-Muskrat
21 Falls commissioning?

22
23 CA-NP-040 (Application Volume 1, para. 15 of Application) Is it
24 appropriate to increase all rates by 0.8% given that the
25 reduction in load is largely owing to decreases in domestic load
26 brought on by conversions of electric baseboard heating to heat
27 pumps? Do the allocators in the cost of service study reflect
28 the changes in load profile brought on by heat pump
29 conversions? If not, please explain how the cost of service
30 study fairly allocates costs to the different customer classes.

31
32 CA-NP-041 (Application Volume 1, page 1-2) It is stated "*This forecast*
33 *decline in energy sales reflects the challenging economic*
34 *conditions in Newfoundland Power's service territory.*
35 *Housing starts in the province are forecast to decline,*
36 *unemployment is expected to remain high, and Provincial*
37 *Government spending is expected to be constrained as the*
38 *province addresses its debt obligations and annual fiscal*
39 *deficits.*"

40 a) Is the economic situation expected to be even worse
41 with the introduction of Muskrat Falls Project costs in
42 rates later this year? Please explain.

- 1
2
3
4
- 5 CA-NP-046 (Application Volume 1, page 2-1) It is stated “*Newfoundland Power provides service in the least-cost manner responsive to customers’ expectations.*” Provide all documentation relating to customer interactions where customers were asked to make a trade-off between costs and service improvements.
- 6
7
8
9
10
- 11 CA-NP-047 (Application Volume 1, page 2-2) It is stated “*The Company’s operating costs per customer were reduced by approximately 16% on an inflation-adjusted basis over the last decade.*” Why have operating costs been reduced over the past decade but are now increasing NP’s proposed rates by 2% (Application page 1-9)? How does performance compare to a peer group of similar distribution companies, for example, that used by Mr. Coyne (Application, Volume 3)?
- 12
13
14
15
16
17
18
19
- 20 CA-NP-048 (Application Volume 1, page 2-9) It is stated “*Newfoundland Power’s Customer Service System has been integral to the delivery of efficient and responsive customer service since 1993. The Company is executing a plan to replace this system by 2023 following 30 years of operation. Replacement of this system will ensure customers continue to be served in an efficient and responsive manner over the longer term.*” Can customers expect a rate reduction in 2024 following implementation of the new CSS? Please quantify the expected efficiency gain from the new CSS and its impact on customer rates.
- 21
22
23
24
25
26
27
28
29
30
31
- 32 CA-NP-049 (Application Volume 1, page 2-8) It is stated “*Newfoundland Power’s meter reading operating costs were reduced by approximately 81% from \$2.8 million in 2012 to \$540,000 in 2020.*”
- 33
34
35
- 36 a) How much did customers pay for the new meters?
- 37 b) Please confirm that the current metering and billing system is not suited to implementation of time-of-use rates.
- 38
39
- 40 c) What would it cost to implement a metering and billing system that enables implementation of time-of-use rates?
- 41
42

- 1 d) Please confirm that NP has no plan to implement time-
2 of-use rates prior to 2030.
- 3 e) Given customer desire to track energy consumption, can
4 it be concluded that customers desire time-of-use rates?
- 5 f) Was customer choice considered in NP's decision to
6 abandon implementation of time-of-use rates?
- 7
- 8 CA-NP-050 (Application Volume 1, page 2-9) It is stated "*Customers'*
9 *satisfaction with Newfoundland Power's service delivery is*
10 *assessed through quarterly surveys.*" Identify all questions in
11 the survey relating to cost and rate impacts, and customer
12 willingness to pay for service improvements. For example,
13 were customers asked if they:
- 14 a) Would be willing to trade off reduced reliability in the
15 form of an expected additional hour of interruption
16 annually in exchange for a 2% reduction in rates?
- 17 b) Desire service reliability that is superior to other
18 Canadian provinces regardless of the cost (Tables 2-7,
19 2-8 and 2-10)?
- 20
- 21 CA-NP-051 (Application Volume 1, page 2-10) It is stated "*Customers'*
22 *satisfaction with the Company's service delivery was lowest in*
23 *2014, which was marked by widespread customer outages due*
24 *to a loss of supply. This highlights the importance of service*
25 *reliability to Newfoundland Power's customers.*"
- 26 a) To what extent was NP at fault for these supply
27 interruptions?
- 28 b) Given that customer satisfaction was low at this time
29 what steps has NP taken to address the cause of these
30 outages?
- 31 c) Does NP believe that outages of generation and
32 transmission on Hydro's system that led to loss of load
33 to its customers is justification to spend money to
34 improve reliability on the distribution system, or would
35 the money be better spent on alleviating the cause of the
36 outages? Please explain.
- 37
- 38 CA-NP-052 (Application Volume 1, page 2-26) It is stated "*Newfoundland*
39 *Power aims to complete new service connections within 10*
40 *business days. The Company's target is to meet this timeframe*
41 *for at least 85% of new service connections.*" Provide all
42 documentation indicating that customers expect/desire new
43 service connections within 10 days. Provide the time frame

- 1 when the customers were interviewed and evidence that
 2 customers continue to expect this level of service during these
 3 difficult economic times in the Province.
 4
- 5 CA-NP-053 (Application Volume 1, page 2-39) It is stated “*This approach*
 6 *to capital budgeting is conducive to rate stability for*
 7 *customers.*” Have customers indicated a preference for stable
 8 rates over rate reductions?
 9
- 10 CA-NP-054 (Application Volume 1, page 2-40) It is stated “*Capital*
 11 *expenditures are forecast to average approximately \$107*
 12 *million annually from 2021 to 2023. This compares to an*
 13 *average of approximately \$97 million per year in 2019 and*
 14 *2020.*”
 15 a) Why are capital cost increases of over 10% proposed in
 16 the 2021 to 2023 time-frame?
 17 b) What approach was followed by NP to minimize capital
 18 expenditures during this time of economic distress in the
 19 Province?
 20 c) What controls does NP senior management place on line
 21 managers during the preparation of capital budgets?
 22 d) Does NP prioritize its capital budget projects?
 23 e) Did NP incorporate any of the Midgard
 24 recommendations in its 2022 capital budget, or did NP
 25 decide that none of the Midgard recommendations were
 26 worth pursuing in its 2022 capital budget?
 27
- 28 CA-NP-055 (Application Volume 1, page 3-38) It is stated “*Compared to*
 29 *other electric utilities, Newfoundland Power’s service territory*
 30 *is subject to some of the most severe wind and ice conditions*
 31 *for populated regions of Canada.*” Yet Figure 2-7 shows that
 32 NP’s SAIDI performance is roughly twice as good as the
 33 Canadian average under normal operating conditions.
 34 a) Are severe wind and ice conditions accounted for in the
 35 SAIDI statistics?
 36 b) Are other Canadian utilities working to improve their
 37 SAIDI statistics, or have they determined that current
 38 levels of reliability performance are commensurate with
 39 the value their customers place on service?
 40 c) Does this discrepancy suggest that NP is spending far
 41 too much money on reliability improvements?
 42 d) Have NP customers expressed a willingness to pay for
 43 SAIDI performance that is twice the Canadian average?

- 1 Provide all documentation indicating that customers are
 2 willing to pay for reliability that is apparently much
 3 better than the Canadian average and that justifies
 4 “*maintaining overall levels of service reliability for*
 5 *customers*” (as stated on page 1-4 of Application,
 6 Volume 1).
 7
- 8 CA-NP-056 (Application Volume 1, section 5) What is the status of Hydro
 9 and NP discussions relating to changes in the wholesale rate
 10 design charged NP? What are NP plans for studying potential
 11 changes in rate designs for its customers?
 12
- 13 **Operations**
- 14 CA-NP-057 (Application Volume 1, page 2-24) It is stated “*The most*
 15 *recent independent review of Newfoundland Power’s*
 16 *operations was conducted in 2014. The review found that the*
 17 *Company uses an effective combination of periodic*
 18 *inspections, maintenance and capital investments.*” Effective
 19 from what perspective? What cost metric did Liberty use in its
 20 review? For example, did Liberty conduct its review with
 21 respect to customer willingness to pay, or was cost completely
 22 ignored in the Liberty review? Does an operations review
 23 without considering cost provide any meaningful value?
 24
- 25 CA-NP-058 (Application Volume 1, Figure 2-12, page 2-30) How do NP
 26 operating costs per customer compare to a peer group of similar
 27 distribution companies over the same time frame, for example,
 28 that used by Mr. Coyne? Please confirm that NP is proposing
 29 a 2% increase in rates owing to increasing costs in this GRA.
 30
- 31 CA-NP-059 (Application Volume 1, Table 3-1, page 3-3) Why are there
 32 credit balances in the RSA for each year from 2019 through
 33 2023? How would these balances be impacted if load turns out
 34 to be the same as it was in 2019?
 35
- 36 CA-NP-060 (Application Volume 1, Table 3-5, page 3-8) The table shows
 37 that depreciation expense in 2023 is about 21% greater than
 38 depreciation expense in 2019. How does this compare to
 39 inflation over the same period?
 40
- 41 CA-NP-061 (Application Volume 1, page 3-36) It is stated “*On a ¢ per*
 42 *kWh basis, operating costs increased by approximately 10%*
 43 *over the period 2000 to 2020. When adjusted for inflation,*

- 1 *operating costs decreased by approximately 24% over this*
 2 *period. This is reflective of sound cost management.”* How
 3 does this compare to a peer group of similar distribution
 4 companies, for example, that used by Mr. Coyne (Application
 5 Volume 3)? Do other distribution companies employ sound
 6 management practices? Do other utilities prioritize capital
 7 projects? What is considered best practice?
 8
- 9 CA-NP-062 (Application Volume 1, page 3-37) It is stated “*Newfoundland*
 10 *Power is a relatively small-sized, investor-owned utility.”* In
 11 the May 2020 EY report (included with NP’s 2021 Capital
 12 Budget Application) titled *Customer information system –*
 13 *Assessment results and planning recommendations* it is stated
 14 (page 4) “*Newfoundland Power is the last remaining mid-to-*
 15 *large size Canadian utility operating a legacy CIS*
 16 *application...”*
 17 a) Is NP a small-, mid- or large-size utility?
 18 b) Mr. Coyne includes a peer group of utilities in his
 19 evidence (Volume 3 of Application). Provide a
 20 comparison of the utilities included in Mr. Coyne’s peer
 21 groups to NP showing that these utilities are likewise
 22 “*small-sized*”.
- 23
- 24 CA-NP-063 (Application Volume 1, page 3-39) It is stated “*Newfoundland*
 25 *Power is regulated on a cost of service basis broadly consistent*
 26 *with other investor-owned utilities in Canada.”* What other
 27 Fortis-owned utilities in Canada are regulated on a cost of
 28 service basis?
 29
- 30 CA-NP-064 (Application Volume 1, Exhibit 3) It is stated “*Operating*
 31 *forecasts for 2022 and 2023 reflect projected increases of*
 32 *3.00% in 2022 and 2.85% in 2023 for labour, and non-labour*
 33 *increases based upon the GDP deflator.”* Why are operating
 34 costs forecast to increase when the Board has approved every
 35 dollar requested in NP’s capital budgets? Shouldn’t operating
 36 costs be decreasing as a result of capital expenditures?
 37
- 38 CA-NP-065 (Application Volume 2, Labour Forecast) It is stated (page 3
 39 of 4) “*The 2021 labour forecast reflects an overall increase of*
 40 *12.5 FTEs, primarily due to additional labour associated with*
 41 *new customer electrification programs, the Customer Service*
 42 *System (“CSS”) Replacement Project and the Company’s PLT*

1 *Apprentice program.*” Provide the breakdown of FTE
2 increases for each of the 3 categories noted.

3
4 CA-NP-066 (Application Volume 1, Exhibit 1, item 14) What measures is
5 NP taking to reduce uncollectible bills? What are the primary
6 causes of uncollectible bills? Is it accurate to say that
7 uncollectible bills is not a risk to NP because it recovers the
8 amounts as operating costs?
9

10 CA-NP-067 (Application Volume 1, Exhibit 2, item 24) NP plans to spend
11 more than \$0.5 million per year in 2021, 2022 and 2023
12 on advertising. What does it advertise? With electronic
13 communications and its CSS available to reach its customers,
14 why does NP need to advertise at all?
15

16 **Accounting**

17 CA-NP-068 (Application Volume 1, page 3-46) Provide a comparison of
18 NP’s methodology for calculating general expenses capitalized
19 to that used by Hydro. Please explain why any differences are
20 warranted.
21

22 **Return/Cost of Capital**

23 CA-NP-069 (Application Volume 1, pages 3-42 and 3-43) It is stated
24 “*Mr. Coyne recommends a fair rate of return on equity for*
25 *Newfoundland Power of 9.8% based upon a capital structure*
26 *with a 45% common equity component.*” The September 23,
27 2020 presentation by Fortis Inc. titled 2021-2025 Five-Year
28 Outlook Conference Call provides the following: i) Fortis BC
29 Electric - 9.15 ROE on 40% equity, ii) Fortis Alberta (electric)
30 - 8.5% ROE on 37% equity, iii) Maritime Electric - 9.35%
31 ROE on 40% equity, and iv) Fortis Ontario - 8.52% - 9.30%
32 ROE on 40% equity.

- 33 a) Please explain why it is appropriate for NP to have an
34 equity component of 45% when these Canadian Fortis
35 companies have equity components that are 40% or less.
36 b) What return does Mr. Coyne recommend for a capital
37 structure with a 40% common equity component?
38 c) What return does Mr. Coyne recommend for a capital
39 structure with a 37% equity component?
40

41 CA-NP-070 (Application Volume 1, page 1-8) It is indicated that NP’s
42 proposed increase in its return on equity to 9.8% for 2022 and
43 2023 on a common equity ratio of 45% would increase its

- 1 revenue requirement by 1.5%. How much would the revenue
 2 requirement change if the return on equity were to be set at
 3 8.34% with a common equity ratio of 40% as currently
 4 established for electric utilities in Ontario by the Ontario
 5 Energy Board for 2021? See [www.oeb.ca/industry/rules-
 6 codes-and-requirements/cost-capital-parameter-updates](http://www.oeb.ca/industry/rules-codes-and-requirements/cost-capital-parameter-updates).
 7
- 8 CA-NP-071 (Application Volume 1, page 3-12) Table 3-9 shows that NP's
 9 cost of debt declined in 2020 and will continue declining in
 10 2021, 2022 and 2023. With no material change in business
 11 risk, is this decline in the cost of debt an incentive to shift the
 12 equity-debt ratio in favour of more debt? Has NP considered
 13 this option? Why did NP eliminate its preference shares?
 14
- 15 CA-NP-072 (Application Volume 1, page 3-20) Referring to its 45%
 16 common equity ratio, NP states *The Company's capital
 17 structure has not changed in over 2 decades....* For that time
 18 period, please provide a table giving NP's cost of debt by year.
 19
- 20 CA-NP-073 (Application Volume 1, page 3-37) It is stated *The Board
 21 previously determined that a strong equity component is
 22 needed to mitigate the impact of the Company's relatively
 23 small size and low growth potential.* Order No. P.U. 19 (2003)
 24 p.45 is cited in footnote 90 as the source.
 25 a) Please provide an update on NP's size. Specifically,
 26 provide a table showing for each of 2003 and 2020:
 27 number of customers, rate base expressed in constant
 28 dollar terms using the Statistics Canada GDP deflator,
 29 and the percentage change in each.
 30 b) How does NP's size, in terms of number of customers
 31 and rate base, compare with that of each of the electric
 32 utilities in Ontario that are wholly owned subsidiaries of
 33 FortisOntario Inc? What is each one's allowed rate of
 34 return on equity and common equity ratio for 2021?
 35
- 36 CA-NP-074 (Application Volume 1, page 3-41) At present, is there any
 37 balance in the Excess Earnings Account? If so, how much is it
 38 and how will it be allocated?
 39
- 40 CA-NP-075 (Application Volume 3, Cost of Capital Report, page 50) With
 41 respect to Figure 29, please recalculate the Canadian Electric
 42 Average Allowed ROE by including all the regulated electric
 43 utilities in Ontario and Alberta individually. Thus, the revised

- 1 Figure would list all the electric utilities by names, give each
2 one's allowed ROE, and then provide the average based on the
3 number of individual utilities listed.
4
- 5 CA-NP-076 Please compare the forecast state of the provincial economy
6 over the future test years in Table 3-13 to 2018 and 1991 when
7 the Board approved a common equity ratio in a range of 40-
8 45%. If this is not practical, please file any extracts regarding
9 the provincial economy entered into evidence at the time of the
10 Board's 1991 decision.
11
- 12 CA-NP-077 Does NP accept that a 45% common equity ratio exceeds
13 average allowed common equity ratios for Canadian electric
14 transmission and distribution utilities and further that lower
15 financial risk offsets higher business risk? If not, why not?
16
- 17 CA-NP-078 In terms of Table 3.4 depreciation rates, is it fair to say that the
18 decreased depreciation rate applied to distribution assets
19 indicates an increased economic useful life (EUL) for those
20 assets and the absence of stranded asset risk?
21
- 22 CA-NP-079 At page 2-41 NP acknowledges that "Over ½ of the Company's
23 forecast capital expenditures relate to replacement or
24 refurbishment of existing assets." In its judgement is a mature
25 utility like NP more or less risky than a utility facing significant
26 system expansion due to population growth? Please comment
27 in detail about the relative risk of replacement versus
28 expansion capex.
29
- 30 CA-NP-080 At 3-9 NP discusses its defined benefit pension plan. In 2016,
31 NP provided (CA-NP-014) its consulting actuary's Capital
32 Market Assumptions and Methodology (AON Hewitt) and
33 Economic and Market Outlook (Mercer) related to these
34 values. Please provide the latest equivalent reports and any
35 other reports in its possession that deal with future equity and
36 bond market returns on its pension plan assets.
37
- 38 CA-NP-081 In Table 3-9 NP provides its average debt cost for 2019 and
39 that expected out to 2023. Please provide the average debt cost
40 since 2010.
41
- 42 CA-NP-082 On June 2, 2018, NP issued \$75 million first mortgage bonds
43 at 3.815%. For this and any subsequent issues please provide

- 1 the spread over equivalent maturity long Canada bonds and the
 2 actual maturity of the bond. Prior to 2018 has NP previously
 3 issued 40-year bonds and if so, indicate the amount, date and
 4 spread over equivalent maturity long Canada bonds as of the
 5 issue date.
 6
- 7 CA-NP-083 In Table 3-12 NP reports its credit metrics for 2019 and
 8 forecast out to 2023. Are these reported in the same manner as
 9 DBRS and Moody's or would there be any material differences
 10 if calculated by either of them? Please provide the historical
 11 values back to 2010.
 12
- 13 CA-NP-084 NP indicates that it may have difficulty issuing further debt due
 14 to the constraint in its trust deed and the forecast decline in its
 15 interest coverage ratio. Please indicate whether its interest
 16 coverage ratio would be declining if its allowed ROE were
 17 maintained at 8.5% and the exact mechanics of the trust deed,
 18 that is, does the trust deed take into account any debt that is
 19 refinanced by a new issue and whether the earnings based on
 20 an averaging process. Please provide the calculation when NP
 21 last issued mortgage bonds under the trust deed.
 22
- 23 CA-NP-085 In its discussion of its credit ratings, NP indicates the issue
 24 ratings of A2 from Moody's and A from DBRS, both stable.
 25 However, in its filing page 3-14 NP refers in footnote 30 to
 26 what appears to be its *issuer* rating from Moody's of Baa1.
 27 Please indicate which rating NP believes that investors use in
 28 deciding to buy NP's bonds: the issuer or the issue rating and
 29 justify the answer and what NP regards as a "sound" credit
 30 rating consistent with the EPC(1994) the issue or issuer rating?
 31
- 32 CA-NP-086 Please indicate the last time that representatives from Moody's
 33 and or DBRS met (or communicated in a substantive manner)
 34 with NP and whether NP fully briefed them on the possible rate
 35 shock from Muskrat Falls. Please indicate whether this was
 36 before or after both rating agencies confirmed NP's rating and
 37 judged them to be stable.
 38
- 39 CA-NP-087 In the Moody's bond report on page 3 it indicates a debt ratio
 40 for NP of about 49% for each year from 2016 to 2019. With a
 41 55% deemed debt (45% equity) ratio for ratemaking purposes
 42 please explain why Moody's reports a significantly lower

- 1 number. In NP's judgment which number do investors pay
2 attention to 55% or 49%?
3
- 4 CA-NP-088 In the discussion of Muskrat Falls on page 3-35 NP discusses
5 the possibility of being forced to incur additional costs to
6 provide service, which would be after the fact costs, and
7 additional investments to improve the reliability of service,
8 which would be before the fact costs. Please indicate how NP
9 would expect to recover these costs from customers or whether
10 it believes the Board would hold NP responsible for these costs
11 such that they are borne by shareholders.
12
- 13 CA-NP-089 In the discussion of cost flexibility NP discusses the increasing
14 proportion of power costs and fixed costs in its revenue
15 requirement which it judges to be largely outside its control. Is
16 the relevance of this discussion that NP judges it to be riskier
17 than other utilities since the fixed charge in customer rates has
18 not increased proportionately? If so, would NP agree this is a
19 rate design issue that is under the control of the Board? Please
20 indicate how much the fixed charge in Schedule A for rate 1.1
21 customers, currently forecast at \$16.1 monthly, would have to
22 change to match its forecast fixed costs in Table 3-14.
23
- 24 CA-NP-090 NP does not want to return to an automatic ROE adjustment
25 formula for the current test years. Please indicate the forecast
26 ROE stemming from the last ROE adjustment formula before
27 it was suspended by the Board in 2013 for the forecast test
28 years.
29
- 30 CA-NP-091 Is it NP's judgment that the use of an ROE adjustment
31 formula for a future test year increases or reduces NP's risk?
32 Conversely has the use of a formal review, held over relatively
33 frequent time periods, lowered NP's risk relative to what to
34 would have been with the use of an ROE adjustment formula?
35
- 36 CA-NP-092 Please provide the actual return on equity and the allowed ROE
37 for each year since 1990 and discuss any deviations of the
38 actual from allowed ROE outside of the band set by the board.
39 Please discuss any material deviations and whether such causes
40 are now covered by deferral accounts.

- 1 CA-NP-093 Please provide the pre-tax interest coverage ratio, cash flow
2 interest coverage ratio and cash flow debt coverage as on page
3 3-43 for each year since 2000.
4
- 5 CA-NP-094 Please discuss any instances where NP has approached its
6 investment banker since 2000 and been advised that the bond
7 markets were not receptive to an issue by NP and how NP
8 arranged alternative financing.
9
- 10 CA-NP-095 Please provide any recent Moody's analyses of its rating
11 methodology used for evaluating regulated utilities, similar to
12 those filed in both the 2009 and 2012 hearings. If no new ones
13 have been issued please provide the latest documents.
14
- 15 CA-NP-096 Please provide any DBRS documents that describe its generic
16 policies towards regulated Canadian and US utilities.
17
- 18 CA-NP-097 Please provide copies of recent equity analyst reports on Fortis
19 that reference NP in a material way.
20
- 21 CA-NP-098 Please provide Fortis common equity ratio, interest coverage
22 ratio, cash flow to debt and interest coverage and DBRS bond
23 rating since 2000 in a similar manner to that for NP at page 3-
24 43.
25
- 26 CA-NP-099 In its 2016 filing at 4-29 NP referred to potential competition
27 as a result of increased power costs. At that time, NP was asked
28 to provide the cost of conversion for a typical residential
29 customer to an oil furnace and the current annual cost of
30 heating with oil versus electricity for different rate classes.
31 With the increased capital cost of Muskrat Falls can NP revisit
32 and update its answer and also reference any other alternative
33 fuels that both residential and industrial users might switch to
34 such as propane?
35
- 36 CA-NP-100 NP gets its common equity from Fortis as its sole owner, can
37 NP confirm that Fortis has had very large common and
38 preferred share issues over the last few years and provide
39 details of both the amounts and the issue costs attached to the
40 share issues.
41
- 42 CA-NP-101 Has NP ever paid Fortis any issue costs attached to any
43 infusions of common equity from Fortis? Further, Fortis has a

1 dividend reinvestment plan where shares can be purchased at a
 2 2% discount. In the judgment of NP is a 2% issue cost
 3 appropriate for any equity issued by Fortis and then invested in
 4 NP? If not, and bearing in mind the amount of equity generated
 5 through retained earnings, what is NP's best estimate of the
 6 after tax cost paid to issue new equity to Fortis?
 7

8 CA-NP-102

9 Can NP confirm that if its proposals are accepted it is
 10 forecasting earnings to its shareholders of \$56.788 million in
 11 2023 (Exhibit 5) and intends to payout a dividend to them of
 12 \$48.918 million or a dividend payout ratio of 88%? In NP's
 13 judgment is an 88% dividend payout ratio indicative of a high
 14 or low risk company?

15 CA-NP-103

16 Why would NP refer to itself as a small utility when according
 17 to Fortis 2021 AIF, it has 270,000 customers whereas Fortis
 18 BC Electric has 182,000, Maritime Electric 84,000, Fortis
 19 Ontario 67,000? Please provide the current allowed ROE and
 20 common equity ratio for each of these other Fortis utilities.

21 CA-NP-104

22 Please provide monthly trading volumes for Fortis common
 23 and preferred shares since 2010 for the common shares and
 24 when issued for the preference shares.

25 **RFI's Specific to the Evidence of Mr. Coyne**

26 CA-NP-105

27 Please confirm that the Concentric evidence was prepared by
 28 Mr. Coyne or under his direction and that he will be the one
 29 who is cross examined on it at any hearing.

30 CA-NP-106

31 The following is a comparison of the "average" results from
 32 Figure 1 of Mr. Coyne's 2015 and 2018 reports on NP and his
 33 current report:

	2015	2018	2021
CAPM	9.80%	9.33%	10.60%
Constant growth DCF	10.70%	9.85%	10.80%
Multi-stage DCF	9.60%	9.47%	9.90%
Average:	10.10%	9.55%	10.40%

38
 39 a) Please confirm that these averages are correctly
 40 reported and that it is Mr. Coyne's judgment that the fair
 41 rate of return is 0.85% higher currently than in 2018 and
 42 0.30% higher than in 2015.

- 1 a rating as consistent with the fair return standard and a
 2 sound credit rating. If not, why not?
 3
- 4 CA-NP-109 Further to the above RFI, if a utility is unable to obtain a
 5 particular credit rating, is it Mr. Coyne's judgement that the
 6 allowed ROE or capital structure should be set at an unjust or
 7 unreasonable level to obtain such a rating? In other words
 8 which is more important: setting just and reasonable rates or
 9 targeting a particular credit rating? Has Mr. Coyne ever
 10 testified on behalf of a Canadian utility that was unable to
 11 obtain an investment grade credit rating? If so, why was the
 12 rating unattainable?
 13
- 14 CA-NP-110 Would Mr. Coyne accept the basic justification for regulating
 15 utilities is that they are natural monopolies and would
 16 otherwise charge unjust and un-reasonable rates so that
 17 regulation is a surrogate for competition and further that many
 18 competitive firms do not have "favourable" credit ratings?
 19
- 20 CA-NP-111 In terms of the stand-alone principle (page 7). Is the
 21 requirement for just and reasonable rates satisfied if the parent
 22 of NP (Fortis) requires NP to borrow under its own name rather
 23 than the policy of ATCO borrowing at the parent level and
 24 mirroring the costs down to its regulated subsidiaries? That is,
 25 if the parent imposes on its regulated "stand-alone" subsidiary
 26 policies that result in higher costs does that satisfy the legal
 27 requirement that rates be just and reasonable?
 28
- 29 CA-NP-112 In 2016 it was pointed out that Concentric Energy's rate of
 30 return experts in Canada had at various times weighted their
 31 US and Canadian samples differently and emphasised averages
 32 or median values for their estimates. For all evidence filed in
 33 Canada since and including Mr. Gaske's Concentric evidence
 34 filed on behalf of Intragaz Limited partnership (R-3807-2012)
 35 please provide the regulated utility's name how the estimate
 36 was derived (average versus median) and how the US and
 37 Canadian samples were weighted.
 38
- 39 CA-NP-113 With reference to capital structure and ROE (page 7) please
 40 confirm that if the capital structures of two utilities are set at
 41 different levels to equalise risk then they can both be allowed
 42 the same ROE, even though their capital structures are
 43 different. For example, the National Energy Board in 1994 set

- 1 gas pipelines at a 30% common equity ratio and oil pipelines
2 at 45% so both could be allowed the same ROE. If not, why
3 not.
4
- 5 CA-NP-114 With reference to the Canadian economy and the Bank of
6 Canada's risk assessment (page 8). Is it Mr. Coyne's judgment
7 that Canada experienced a "Great Recession" after the US
8 financial crisis or even that Canada experienced a financial
9 crisis? If the answer is yes, please indicate which Canadian
10 banks failed during 2009/10 equivalent to Lehman Brothers,
11 Bear Stearns, Merrill-Lynch (taken over by B of A), Citi bailed
12 out by the US government etc.
13
- 14 CA-NP-115 Mr. Coyne discusses the impact of covid 19 and central bank
15 policies. Please indicate the maximum and current monthly
16 levels of government bond buying undertaken by the Bank of
17 Canada and the US Federal Reserve.
18
- 19 CA-NP-116 On page 22 Mr. Coyne graphs the *level* of the TSX utility index
20 against the long Canada bond *yield*. If Mr. Coyne agrees that
21 security prices vary inversely with required rates of return
22 which for government bonds is the yield, why would he graph
23 a level against a yield, in other words doesn't it simply show
24 this inverse relationship? Please run a simple linear regression
25 of the return on the TSX utility index against the return on the
26 long Canada bond and report the full results, that is coefficient
27 estimates, T. statistics, adjusted R Square etc.
28
- 29 CA-NP-117 On page 24 Mr. Coyne reports the state street investor
30 confidence index, why is this relevant to Canada or
31 Newfoundland? Is Mr. Coyne aware of any Canadian measures
32 of business or financial confidence that might be more relevant
33 to Canada?
34
- 35 CA-NP-118 Mr. Coyne refers to COFACE precisely ranking Canada and
36 the US the same in terms of "risk" Please provide
37 documentation on this ranking, that is, the nature of the
38 organisation and how the rankings were derived.
39
- 40 CA-NP-119 Please provide a listing of all countries with the same ranking
41 as Canada and the US and whether on this basis Mr. Coyne
42 would regard their capital market data as of equivalent value to

- 1 the US data in assessing the fair rate of return for a Canadian
2 utility.
3
- 4 CA-NP-120 Mr. Coyne refers to integration generally. Whereas no-one
5 denies that the US and Canadian capital markets are very close,
6 can he refer to any academic studies that indicate that they are
7 *perfectly* integrated, which is what is required for the law of
8 one price to hold and securities to be valued identically in both
9 markets?
10
- 11 CA-NP-121 In his discussion of interest rates and the integration of US and
12 Canadian capital markets, Mr. Coyne does not seem to graph
13 US versus Canadian long term interest rates, can he please
14 provide such a graph and briefly discuss any implications from
15 that graph for the recent difference between the two.
16
- 17 CA-NP-122 In terms of Mr. Coyne's Canadian sample can he discuss
18 AltaGas's exposure to electricity earnings and whether its
19 utility operations are in the US or Canada? For how long has
20 Mr. Coyne been including Alta Gas in his Canadian sample?
21 Please indicate whether the AltaGas in this sample is the same
22 AltaGas covered in previous decisions by the Alberta Utilities
23 Commission.
24
- 25 CA-NP-123 Please confirm that Enbridge like TC Energy is primarily a
26 pipeline and is not a utility regulated on a cost of service basis
27 like NP. Please confirm that in its 1994 decision that set
28 common equity ratios the National Energy Board allowed the
29 mainline gas transmission utilities a 30% common equity ratio
30 and the oil pipelines, like Enbridge 45%, due to their higher
31 business risk.
32
- 33 CA-NP-124 In terms of Mr. Coyne's US sample please provide the Value
34 Line "one page summary" of the full sample of 36 US Electric
35 utilities and the reasons for excluding each one when
36 narrowing down his sample to 9.
37
- 38 CA-NP-125 In terms of Mr. Coyne's US sample please provide the
39 percentage of generation for each utility and the percentage of
40 generation in plant and equipment coming from nuclear power
41 plants. In Mr. Coyne's judgement is generation an important
42 part of business risk comparisons for US utilities? Why or why
43 not. Please indicate whether in any Canadian evidence a

1 Concentric witness has made adjustments to the results for his
2 US proxy sample due to "generation" risk.

3
4 CA-NP-126 In NP's 2021 annual information form they have the following
5 data:

6
7 **Credit Ratings**

8
9 As at December 31, 2020, the Corporation's credit and stability ratings were as
10 follows.

	First Mortgage Bonds	Outlook
11 DBRS	A	Stable
12 Moody's Investor Services ("Moody's")	A2	Stable

13
14
15
16 Please indicate which holding companies in Mr. Coyne's
17 remaining US sample have a similar A2 senior bond *issue*
18 rating from Moody's *and* 100% regulated operations. Please
19 confirm that NP's parent Fortis has a DBRS rating of A(low)
20 and Baa1 from Moody's.

21
22 CA-NP-127 Mr. Coyne (page 31) states that Canadian regulators have
23 "accepted" the use of US data and proxy groups to estimate the
24 allowed ROE for Canadian firms. Please provide statements
25 from Canadian decisions that have used US estimates *without*
26 *any statement of the need for adjustments or judgment* in
27 determining the fair ROE for a Canadian regulated utility. That
28 is, while this Board has consistently downward adjusted ROE
29 evidence from US utilities has any Board explicitly stated that
30 no adjustment is needed.

31
32 CA-NP-128 In terms of Mr. Coyne's Canadian sample please provide a
33 table showing for each company the percentage of sales and
34 assets denominated in US dollars either through sales or
35 functional currency and confirm that NP has neither US dollar
36 assets nor sales.

37
38 CA-NP-129 For Emera, its US subsidiary in Maine was awarded an allowed
39 ROE of 9.35% effective July 1, 2018 which was slightly below
40 the 9.50% requested at that time by NP. Please indicate
41 whether there have been any subsequent adjustments to this
42 award and provide a copy of this decision by the Maine PUC.

- 1 CA-NP-130 In terms of the cost of equity capital estimation techniques, can
2 Mr. Coyne provide any information on what percentage of
3 firms use DCF versus CAPM estimation techniques? Is he
4 aware of any published survey results over the last 25 years
5 that have looked at this? Are there any results specifically
6 aimed at rate of return regulated versus non-regulated firms?
7
- 8 CA-NP-131 For the DCF equation on page 34 please explain how the
9 constant growth formula on page 34 is derived from the general
10 formula on page 33. That is what assumptions are required to
11 go from the general to the specific? Is it Mr. Coyne's judgment
12 that the equation on page 34 is appropriate for all firms or just
13 a subset of firms that satisfy the mathematical assumptions for
14 the DCF formula? Please provide any references to graduate
15 finance textbooks that justifies Mr. Coyne's answer.
16
- 17 CA-NP-132 Please provide the underlying data used to generate the
18 statistics in Figure 19, that is, for each company provide the
19 underlying dividend per share, book value per share and
20 earnings per share. Please explain whether the earnings series
21 is as reported in each firm's financial statements or whether
22 Value Line has "adjusted" them and explain the adjustments.
23
- 24 CA-NP-133 Please provide the evidentiary basis for saying that investors
25 actually rely on analyst forecasts? Is Mr. Coyne aware of any
26 surveys of institutions and how they use or rely on sell side
27 analyst forecasts? Would Mr. Coyne agree that the projections
28 he is using are commonly from what are referred to as sell-side
29 analysts and that there are also buy-side analysts? If investors
30 relied on such reports why would buy side analysts exist?
31
- 32 CA-NP-134 Please provide the Value Line book value per share, dividends
33 per share and earnings per share for each of the 36 firms in
34 Value Line's electricity sample and indicate whether any of the
35 excluded firms have previously been used by Mr. Coyne (or
36 any Concentric witness) in a proxy sample.
37
- 38 CA-NP-135 Please discuss whether Mr. Coyne judges there to be a
39 survivorship bias in reducing his US sample to 9 firms from
40 the Value Line sample of 36 in the sense that mergers and
41 acquisitions can enhance earnings per share growth rates for
42 the holding companies above the organic growth rate of the
43 underlying regulated utilities. If Mr. Coyne disagrees with this

- 1 possibility, please provide the number of acquisitions made by
2 each of the surviving 9 utilities in his sample over the last 10
3 years and whether there were any statements about “earnings
4 accretion” attached to the merger or acquisition.
5
- 6 CA-NP-136 On page 36, Mr. Coyne quotes research from 2010 that the
7 median forecast growth rate bias has declined significantly.
8 Please confirm that declined does not mean removed and
9 indicate the size of the remaining bias, and whether more
10 recent research has documented any changes in the bias since
11 stock markets recovered after 2010.
12
- 13 CA-NP-137 In a June 19, 2014 Decision (Opinion 531, paragraph 33) the
14 US Federal Energy Regulatory Commission (FERC) pointed
15 out that as long ago as 1983 it stated that short term growth
16 rates from investment advisory services cannot be relied on. It
17 therefore felt that “*the constant growth DCF model requires*
18 *(emphasis added) consideration of long-term growth*
19 *projections.*” Has Mr. Coyne provided a recent cost of equity
20 report before the FERC and if so does he agree with this
21 decision?
22
- 23 CA-NP-138 Can Mr. Coyne confirm that if short run growth forecasts
24 cannot be relied on then mixing them with a long run growth
25 rate in a multi-stage estimate simply reduces the bias but
26 cannot remove it? If Mr. Coyne disagrees with this conclusion,
27 please explain why in detail.
28
- 29 CA-NP-139 In the FERC decision referenced above the FERC indicated
30 (paragraph 39) that “*short term growth estimates will be based*
31 *on the five-year projections reported by IBES.*” In Mr. Coyne’s
32 Exhibit JMC -3 can he confirm that the growth projections in
33 his report are all five-year growth estimates, rather than for a
34 shorter time period and provide documentary support?
35
- 36 CA-NP-140 In the Table on page 39, the multi-stage DCF estimates are all
37 lower than the constant growth estimates, can Mr. Coyne
38 confirm that this is solely because the short run growth
39 estimates exceed the long run GDP forecast. Please explain
40 why this is not the case if he disagrees.
41
- 42 CA-NP-141 With reference to the Table on page 39 has Mr. Coyne ever
43 presented evidence before a Canadian tribunal where the

- 1 average multi-stage DCF results were higher than the constant
2 growth estimates? If he has, please provide the relevant pages
3 of the evidence to confirm this.
4
- 5 CA-NP-142 Please provide a copy of the Moody's 2013 report referenced
6 at footnote 47 and confirm that just because Moody's views the
7 regulatory protection of US utilities to have improved it does
8 not mean that they necessarily judge that it is equal to that of
9 Canadian utilities. If not please explain why not.
10
- 11 CA-NP-143 On page 42 Mr. Coyne indicates that a three-year forecast of
12 long term interest rates gives estimates of 2.54% for Canada
13 and 3.0% for the US, does Mr. Coyne use this difference of
14 0.46% to downwardly adjust US equity cost estimates for use
15 in Canada? If so please show where in his report he adjusts his
16 US estimates downwards.
17
- 18 CA-NP-144 Mr. Coyne explains (page 43) that he uses Bloomberg Beta
19 estimates based on parameters entered by the user. Instead of
20 entering an adjustment, please provide the beta estimates
21 without an adjustment using the same Bloomberg data for both
22 weekly and monthly stock returns Please confirm that the
23 returns have been adjusted for dividend payments and
24 represent total returns, not just price returns.
25
- 26 CA-NP-145 Mr. Coyne states (page 43) that "*numerous empirical studies*
27 *have provided evidence that an individual company Beta is*
28 *more likely than not to move toward the market average of 1.0*
29 *over time.*" Please provide citations to these numerous studies,
30 references to any graduate textbooks in finance that discuss
31 such procedures, and any published work based specifically on
32 public utilities. Please indicate if Mr. Coyne is aware of any
33 published research that shows that utility betas do not adjust
34 toward 1.0 and provide the relevant citations.
35
- 36 CA-NP-146 Please confirm that Mr. Coyne's betas are based on *weekly* data
37 and that such estimates are often regarded as biased due to
38 thin-trading problems. Please indicate whether Mr. Coyne is
39 aware of any published academic research that analyzes this
40 "intervalling" effect.
41
- 42 CA-NP-147 Will Mr. Coyne agree that the "statistical" argument he uses on
43 page 43 implies that utility betas move toward 1.0 and if so,

- 1 when he last observed unadjusted Canadian betas with a value
2 of 1.0?
3
- 4 CA-NP-148 Please confirm that the Brattle group referenced by Mr. Coyne
5 on page 44 regularly provide reports sponsored by utilities, for
6 example, on behalf of the ATCO utilities before the Alberta
7 Utilities Commission and TransCanada before the NEB.
8 Similarly, that Dr. Morin provides expert evidence on behalf
9 of utilities most recently in Canada before the Regie for Gaz
10 Metro. If Mr. Coyne cannot so confirm please provide any
11 references to Dr. Morin or members of the Brattle group
12 providing evidence on behalf of interveners.
13
- 14 CA-NP-149 Is Mr. Coyne aware of the Credit Suisse annual by Dimson et
15 al that looks at market risk premiums around the world and
16 shows that they are all quite similar in developed markets even
17 in the presence of large barriers to capital flows and that this is
18 nothing to do with “integration” per se? If not please explain
19 why not and if he agrees please explain the value of averaging
20 the US and Canada, rather than all the developed markets
21 included in the Credit Suisse Annual.
22
- 23 CA-NP-150 In terms of Mr. Coyne’s forward looking DCF estimates for
24 the market on page 39 and Exhibits JMC-5 &6, please provide
25 the source and term (horizon) of the expected growth rate. If
26 this is a short-term (less than 5 year) forecast from investment
27 analysts, please explain why this is acceptable embedded in a
28 market risk premium estimate when FERC found it unreliable
29 in a straight DCF constant growth estimate?
30
- 31 CA-NP-151 Please confirm that the AUC in 2018 specifically rejected
32 Mr. Coyne’s forward looking market risk premium estimates
33 since the growth rates were unrealistically too high.
34
- 35 CA-NP-152 Please provide the forward-looking DCF market risk premium
36 estimate from the data in JMC- 5&6 using a multi-stage DCF
37 model and confirm that the market risk premium estimate
38 drops to approximately 6.0%.
39
- 40 CA-NP-153 Please confirm that in the historic market risk premium
41 estimates on page 45 Mr. Coyne now uses the “income” return
42 or yield rather than the actual return of income plus capital gain
43 or loss for the bond returns.

- 1 a) Please provide the market risk premium estimate for
2 both the US and Canada based on the standard
3 methodology of total equity minus total bond total
4 returns.
5 b) Please indicate when Mr. Coyne started using the
6 income (yield) return in the historic market risk
7 premium estimates rather than the standard total return
8 for bonds.
9 c) Please provide any references to the academic literature
10 that calculate the market risk premium in the same way
11 that Mr. Coyne does.
12

13 CA-NP-154 Mr. Coyne adds 0.50% for an issue cost and financial
14 flexibility adjustment. Please provide all data Mr. Coyne relied
15 on to estimate the costs that NP bears in raising equity capital
16 from its parent Fortis. Is such an adjustment needed for NP
17 when it is not raising equity capital, but instead returning it to
18 its parent Fortis?
19

20 CA-NP-155 Is Mr. Coyne aware that in the past Canadian regulators, such
21 as the Ontario Energy Board, have allowed an ROE less than
22 the long Canada bond yield. If so, how does this fit with his
23 risk premium analysis on pages 46-47?
24

25 CA-NP-156 Can Mr. Coyne confirm that in his risk premium analysis he is
26 using allowed returns for US not Canadian utilities and that if
27 US returns are consistently higher than in Canada by say a
28 constant 2% this will be reflected in his estimates? Further that
29 the use of allowed ROEs from US utilities has been specifically
30 rejected by for example the AUC? Please provide any decision
31 by a Canadian regulator that has specifically accepted the use
32 of US allowed returns in Canada. Please provide the
33 underlying data in machine readable form (Excel).
34

35 CA-NP-157 Can Mr. Coyne confirm that in his risk premium analysis and
36 graph on page 48 he has the long Treasury yield in both the risk
37 premium and as an independent variable, that is they are on
38 both sides of the equation. Please indicate whether he judges
39 this to automatically generate a negative slope coefficient.
40 Please re-run the regression equation as the allowed ROE
41 against the long Treasury yield and provide the results. Please
42 provide all the underlying data to replicate Figure 27 in
43 machine readable form (Excel).

- 1 CA-NP-158 In terms of the common equity ratio comparisons on pages
2 54-55, can Mr. Coyne confirm that whereas these are set by
3 Canadian regulators, in general US regulators leave this to
4 management discretion unless they are clearly unreasonable?
5 Please indicate any evidence he has ever offered in Canada
6 where a Canadian sample has had a higher average common
7 equity ratio than the US “proxy” group. Please indicate
8 whether the US firms in Figure 31 are operating companies
9 within a utility holding company or standalone utilities where
10 the shares are traded in the capital market.
11
- 12 CA-NP-159 Please provide the Moody’s and S&P credit ratings for all 36
13 utilities covered by Value Line.
14
- 15 CA-NP-160 Please confirm that S&P will not rate an operating subsidiary’s
16 debt higher than the parent unless there are exceptional
17 reasons, such as ring fencing the sub.
18
- 19 CA-NP-161 Can Mr. Coyne confirm that he checked NP’s security filings
20 to see whether NP has informed investors of any changes in its
21 risk profile since 2015. If so, please provide any extracts from
22 such filings that indicate increased business risk for NP.
23
- 24 CA-NP-162 Given the importance of the recovery of power costs, can
25 Mr. Coyne provide copies of all demand studies relied on to
26 indicate there may be problems in recovering the higher cost
27 of Muskrat Falls power supply? In particular, what studies of
28 the price elasticity of demand for electricity in Newfoundland
29 did NP provide, or Mr. Coyne consult, in the preparation of his
30 report?
31
- 32 CA-NP-163 Can Mr. Coyne confirm that Atco Electric and Maritime
33 electric are both smaller than Newfoundland Power, but they
34 are allowed 37% and 40% common equity respectively. How
35 would this square with Mr. Coyne’s judgment that size equates
36 to risk?
37
- 38 CA-NP-164 For the US companies listed in JMC-1 please indicate the
39 *deemed* common equity ratios for the regulated operating
40 subsidiaries and a reference to the decisions setting these
41 common equity ratios. Alternatively, if the regulators do not
42 set these common equity ratios but simply approve them,

- 1 please indicate whether Mr. Coyne judges this to be a material
2 difference to NP.
3
- 4 CA-NP-165 For the US companies listed in JMC-10 please indicate when
5 the allowed ROE for the regulated operating subsidiaries was
6 set and the decisions related to those ROEs.
7
- 8 CA-NP-166 For the US companies listed in JMC-10 with historic test years
9 can Mr. Coyne provide his judgment on whether historic test
10 years are riskier than forward test years and the frequency of
11 review for the firms on historic test years?
12
- 13 CA-NP-167 Please provide NP's DBRS and Moody's bond ratings since
14 1990 and reference any statements made either when they were
15 changed or the Board set the common equity ratio to a range of
16 40-45% in 1991.
17
- 18 CA-NP-168 The discussion of NP's business risk mirrors that of the
19 company. Please:
20 a) Indicate the timing of the meetings that took place
21 between Concentric and NP staff (both face and by
22 conference call);
23 b) Provide copies of all materials that NP passed to
24 Mr. Coyne to brief him on NP's business risk that are
25 not already filed; and
26 c) Indicate any substantive differences in the judgement of
27 NP and Mr. Coyne in terms of NP's business risk.
28
- 29 CA-NP-169 Please provide a copy of the UBS report reference on page 72.
30
- 31 CA-NP-170 Please provide a copy of all electric industry reports by DBRS,
32 S&P or Moody's over the past ten years and indicate whether
33 a carbon tax on alternative fuel sources such as fuel oil,
34 propane etc., increases or decreases an electric utility's
35 business risk.
36
- 37 CA-NP-171 Please confirm that Mr. Coyne's risk assessment of NP is based
38 on an assessment for the test years 2022 and 2023.
39
- 40 CA-NP-172 In this application NP is seeking a rate of return of 9.8%.
41 Please advise if this application is successful, will
42 Newfoundland and Labrador Hydro be entitled to 9.8%?
43 Please advise if this application is successful, if the rate of

- 1 return for the Labrador Island Transmission Link and the
 2 contractual obligations hereunder will also ensure a rate of
 3 return of 9.8%.
- 4 a) Has NP calculated the cost to rate payers and rates
 5 resulting from the above, and please provide the same?
 6
- 7 CA-NP-173 NP in recent years has experienced executive changes. Some
 8 executives transferred to other Fortis companies. Some have
 9 retired.
- 10 a) Please advise what regulatory costs are involved in
 11 reference to pensionable benefits and any and all
 12 compensation when executives transfer from one Fortis
 13 company to another.
- 14 b) Are executives entitled to pensions which are funded by
 15 rate payers, and if so, please provide particulars of the
 16 executive pension plan?
- 17 c) In terms of all other employees, please advise of the
 18 average pension an employee would receive upon
 19 retirement for the following decades:
 20 i) 1970-1980
 21 ii) 1980-1990
 22 iii) 1990-2000
 23 iv) 2000-2010
 24 v) 2010-2020
 25
- 26 CA-NP-174 NP is primarily a distribution company whereas Newfoundland
 27 and Labrador Hydro is a generation company. Based on assets
 28 and costs it would be reasonable to submit that Newfoundland
 29 and Labrador Hydro's capital budgets would normally exceed
 30 NP's capital budgets. Please provide a table year over year,
 31 from 2004 onward, showing on one side of the table NP's
 32 capital budgets as approved by the board, and on the other side
 33 of the table, Newfoundland and Labrador Hydro's capital
 34 budgets as approved by the board.
 35
- 36 CA-NP-175 Please provide on a table the annual profit that NP receives for
 37 the period 2005-2020, and an adjoining table if this application
 38 is successful, please provide the annual profit that NP would
 39 receive year over year.

Dated at St. John's in the Province of Newfoundland and Labrador, this 2nd day of August, 2021.

A handwritten signature in blue ink that reads "Dennis Browne". The signature is written in a cursive style with a horizontal line underneath.
