

1 **Re Refurbish Fuel Storage Facility (Holyrood), page B-2:**

2 Q. At page 2 of the Hydro report, "Holyrood Thermal Generating Station
3 Refurbishment of the Fuel Oil Storage Facility", it is stated *that "Should the
4 Lower Churchill Project proceed, the earliest that the facility will not be
5 required is 2015."*

6

7 In the Introduction to the engineering consultant's report, it is stated *that "The
8 objective of this assessment is to determine the extent of upgrades required
9 for the tanks, pipelines and drainage, as well as the power and lighting
10 system, to extend the useful life of the facility by at least 20 years"*

11

12 Was the engineering consultant asked if its recommendations were valid to
13 extend useful life for less than 10 years, where it was probable that it would
14 be known in 2009 whether decommissioning of the fuel oil storage facility
15 would occur within that timeframe?

16

17

18 A. No, the consultant's report was completed before the milestone dates were
19 set for the Lower Churchill Project.
