

1 Q. Will the implementation of the Water Management Agreement result in a different
2 flow in the Lower Churchill River and/or the CF(L)Co tailrace at particular times and
3 places than under current practice?
4

5 A. Yes, it is anticipated that, at times, the Water Management Agreement may result
6 in some variation in the flow of the Lower Churchill River and/or the CF(L)Co
7 tailrace. Any such variation, however, would occur wholly within the existing
8 operating parameters of the CF(L)Co facility and would be negligible in the context
9 of existing customer requirements for seasonal and hourly flexibility. The following
10 chart is illustrative of the point.
