

1 Q. If so, what is the anticipated percentage difference in the Lower Churchill (*sic*) River
2 and/or the CF(L)Co tailrace between the flow that will exist after the
3 implementation of the Water Management Agreement and the flow that would
4 otherwise be present?

5

6

7 A. It is difficult to establish with any degree of precision the percentage difference in
8 the flow of the Lower Churchill River and/or the CF(L)Co tailrace before and after
9 the implementation of the Water Management Agreement. However, as illustrated
10 in the flow chart provided in CIE-CF(L)Co-2, the percentage difference is expected to
11 be minimal.
