

1 Q. Please confirm, on the basis of the updated information in items 11 and 12 at pages
2 4-5, that as part of the GRA, Hydro is now seeking a Test Year 2015 fuel price equal
3 to \$64.41/bbl (including for the purposes of setting the NP second block rate). If this
4 is not correct, please provide Hydro's proposed 2015 Test Year fuel price for use in
5 the GRA (and establishing the NP second block rate) and indicate whether (and if so
6 when), Hydro's proposed 2015 Test Year Fuel Price will be further updated as part
7 of the GRA process.

8
9
10 A. Hydro believes it is appropriate for the Board to update the 2015 Test Year No. 6
11 fuel cost forecast in determination of final customer rates. Hydro believes the 2016
12 forecast No. 6 fuel cost of \$64.41 per barrel (\$Cdn) is reasonable for use in
13 determining the 2015 Test Year cost of service. If, in the final GRA Board Order, the
14 Board approves the forecast No. 6 fuel cost for 2016 of \$64.41 per barrel (\$Cdn) as
15 the 2015 Test Year fuel cost to be used in establishing final customer rates, Hydro
16 will use this fuel cost in determining the 2015 Test Year revenue requirement and
17 rate design in its compliance filing.
