

1 Q. (GRA, Volume II, Exhibit 4 – Corner Brook Pulp & Paper Generation Credit, page
2 15/16)

3 Why are estimated savings from the change in CBPP generation not allocated more
4 closely with energy ratios; i.e., the ICs are projected to receive 31% of the savings
5 while NP receives 64%, and Rural Customers receive the remaining 5%?
6
7

8 A. Please see Hydro's response to IC-NLH-058 for the methodology in recalculating the
9 COS allocations. The Industrial Customers received the benefit of reduced load,
10 relative to the other two classes, in addition to the overall decrease in energy costs.
