

1    Q.    **Cost of Service**

2            Please provide a table showing cost allocations and rate increases for the Island  
3            Interconnected System customer classes comparing: 1) proposed rates and  
4            allocations for the 2015 Test Year, to 2) a scenario based on CBPP hydraulic  
5            generation treated as a separate generation entity and removed from the cost of  
6            service; i.e., CBPP hydraulic generation would be treated as an independent power  
7            producer much like Exploits Generation.
