

1 **Q. Further to IC-CA-11, please confirm that the average Holyrood Capacity factor**
2 **for 2015-2017 cannot be higher than the 2015 forecast of 30% when average**
3 **generation for 2016 and 2017 is lower than 2015 forecast generation.**
4

5 **A.** Mr. Doug Bowman confirms that based on figures referenced in IC-CA-011, the
6 average Holyrood net production for 2015 to 2017 of 1584.2 GW.h is lower than the net
7 production of 1593 GW.h forecast for 2015, and the net capacity factor for Holyrood
8 would also be lower. These figures are based on net production rather than gross
9 production which appears to be the basis for the figures in Table 4.4 of the Amended
10 2013 GRA (Volume I, page 4.16).
