

1    Q.    Please provide a detailed description of the impact, if any, of the CBPP Generation  
2           Credit on the CBPP nomination of its Power On Order, or the ability to reduce its  
3           Power On Order to reflect the theoretical full potential output of its hydraulic  
4           generation at all peak times.

5

6

7    A.    Hydro assumes that CBPP was using its theoretical full potential output of its  
8           hydraulic generation in setting its required Power on Order prior to implementation  
9           of the Generation Credit contract so there should be no impact in that respect.  
10          Hydro does not have any further details as to any impact on CBPP's nomination of  
11          Power on Order since the contract implementation in 2009.
