

1 Q. Please provide the revised COS in excel format with NP's native peak forecast for
2 2013 based on the average of the actual NP load factors for the last five years.

3

4

5 A. []

6

7 In the original response to IC-NLH-105 it is stated, "[t]he 2013 GRA NP peak load
8 forecast is meant to reflect normal weather for the months of April to December.

9 The NP native peak loads for January to March are actual peaks".

10

11 The revised response to IC-NLH-105 states, "[t]he 2015 GRA NP peak load forecast
12 is meant to reflect normal weather". Given that the 2015 GRA NP native peak is
13 based on a normalized forecast, Hydro considers it unnecessary to provide a revised
14 COS which is based on the average of the actual NP load factors for the last five
15 years.
