

1     Q.     Further to V-NLH-111, Attachment 1: Please confirm that in Column H of V-NLH-  
2           111, Attachment 1 the total transmission plant in service [Line 9] should stay at  
3           100% as per 2015 COS and should not be adjusted downwards as there is no change  
4           in total cost [i.e. the exercise is only to reduce the O&M amount allocated to  
5           specifically assigned].  
6  
7

8     A.     Hydro does not agree with this assertion. In order to calculate correctly, the total  
9           transmission plant in service should be adjusted by the same discount factor as the  
10          specifically assigned transmission plant (i.e., discounted using the Handy-Whitman  
11          Index).
